Shaw, Honolulu, Hawaiian Islands, one Duroc boar.

WIPE OUT EVERY RAT AND GOPHER

Amazing New Discovery Quickly Gets Every One. Not a Poison

Don't be satisfied with trapping or poisoning just a few. Exterminate the whole bunch—old, young, big and little. Rats do millions of dollars' damage each year. They kill chickens, destroy grain, damage buildings, merchandise, and are filthy disease carriers.

A wonderful new scientific discovery called Imperial Virus now enables you to clear your place of every rat on it. The amazing feature of it is that it is not a poison and affected rodents such as Rats, Mice, Gophers, Prairie Dogs, Ground Squirrels, etc., only. It is perfectly harmless to humans, stock, poultry, pets. It can, therefore, be spread anywhere knowing it will kill only the pests you want to get. One rat affects the others and in a short time the whole colony is exterminated, root and branch. They die outside, too, hunting air and water.

YOU CAN TRY IT FREE

The manufacturers of this amazing Virus, to get is quickly established and widely used, are making a Special Guaranteed Introductory Offer of two regular, big, full sized (double strength) $1.00 bottles, for the price of one. Use one yourself and sell the other to a neighbor, thus getting yours free. They will also tell you how you can make money telling your friends about it. As this offer may not appear again, you should act at once or clip for future reference.

You need send no money; just your name and address to the Imperial Laboratories, Room 215, 2110 Grand Avenue, Kansas City, Mo., and pay the postman $1.00 and a few cents postage, when the two bottles arrive. It costs you nothing if it does not do the work, as they positively guarantee to refund your $1.00 any time after 30 days if you are not satisfied.

PATENT ATTORNEYS

WEBSTER, WEBSTER & BLEWETT, Savings and Loan Bldg., Stockton, California. Established 50 years. Send for free book on patents.

CALIFORNIA LEADS IN HOPS

(Continued from Page 393.)

The hops flowers are greenish or yellowish, and it is the flowers for which the plant is cultivated. They contain a peculiar substance, known as lupulin, which is a golden yellow powder of bitter properties. The lupulin constitutes about 5 per cent by weight of the flower, and the bitter principle about 20 per cent of the lupulin.

In California the curing of hops is done at a low, even temperature and without any fire or fumes of fire coming in contact with the hops. On the largest and most up-to-date plants air drying kilns represent the highest development of the drying process. In foreign countries practically all the hops are dried over open fires, thereby unfavorably affecting the delicate and essential properties of the output.

PRODUCERS STEAMSHIP CO.

(Continued from Page 395.)

pre-cool the fruit at once, and hold it cool in storage and on the ship until unloaded at the markets in Philadelphia, New York and Boston.

"This requires that the steamship company shall own and operate a fleet of heavy duty trucks with bodies specially constructed for this service, with covers to protect the fruit from sun and rain.

"The company will own its dock at San Pedro, with a pre-cooling and storage plant thereon large enough to hold about 200 cars of fruit ready for loading when a ship arrives. Every modern mechanical device for handling the fruit rapidly from dock to ship will be included in the equipment of the company's dock."

"A friend," said Uncle Eben, "is a man dat laughs at yoh funny stories, even if dey ain't so good; an' sympathizes wif yoh misfortunes, even if dey ain't so bad."

Humus

Humus, the element so necessary in California soils will be interestingly exhibited at the Nurserymen's Exposition by The Pacific Humus Company. Beautiful potted plants from many nurseries that have used this humus beautify the exhibit and make it one of the most attractive on the exposition grounds.

Egg Laying Contest for the Southland

By Jean A. Koethen

SOUTHERN CALIFORNIA is on the map at last. It must be more than ten years since the first egg laying contest was staged in the east, and it is six since first contest in California at the Panama-Pacific exposition. Contests have been held in Washington and Oregon since 1918, and in the fall of 1918 the California farm bureau egg laying contest was inaugurated at Santa Cruz. This gave such an impetus to poultry culture throughout the state that a Southern California contest was deemed not only possible but imperative. After several months of hard work by Assistant Farm Advisor Gordon a committee of local poultrymen consisting of Cornele G. Ross of Pomona, M. A. Schofield of Gardena and E. J. Houser of Fontana, assisted by Professor Dougherty and Mr. Easson of the poultry division, contest plans took shape, and on the first day of October the 576 hens to which the contest was limited settled down for their year's work.

When it was announced that entries would be limited to 50 pens of 12 hens each there were those who wondered whether there would be interest enough to fill 50 entries with the entry fee at $2 per hen, but before closing day the management was turning away birds, and on September 28, the day of the farm bureau picnic when the contest houses were first opened for inspection, every pen was full.

Southern California Egg Laying Contest
Buildings at Pomona in which an annual contest of layers began on Saturday, October 1. This contest will continue for 12 months and will be conducted as nearly as possible under the same conditions as ordinary commercial egg production.

The Contest Houses

Pomona, long recognized as a poultry center, was fittingly chosen as the location of the contest, and houses built on the model of those at Santa Cruz were erected at the corner of Eighth Street and Gary Avenue. Eighteen feet wide and 100 feet long and fronting south to admit every bit of sunshine these two houses are divided into pens 18 by 20, each designed to hold eight entries, or 96 birds. Four of the ten pens have been divided again in order to accommodate the eight experimental pens. The other six have each their quota of 96 birds.

Each pen is provided with 32 trapnests with wire tops and bottoms to make them as nearly as possible mite proof, and for the same reason shavings are used for nest litter. A slatted mash hopper, automatic drip fountain and wire hopper for green feed, which is placed under the droppings board as far as possible from the sunshine complete the equipment of each pen. Two yards, each 20 by 50 and so arranged that greens may be grown in one while the other is occupied, adjoin each pen at the rear. Before the hens are placed in the houses their wings are clipped so that there may be no danger whatever of their flying over the fences and confusing the record.

Feeding the Layers

The poultry division has spared no pains in working out a nourishing and wholesome ration, and C. G. Burgess, the resident manager, is carrying out their instructions with exacting care. The mash, which is before the hens constantly, consists of 35 per cent bran, 20 per cent Red Dog flour, 20 per cent corn meal, 10 per cent linseed meal, 7½ per cent each meat scrap and fish scrap, 2½ per cent charcoal and ½ per cent salt. The scratch feed, which is fed in litter at night, is 40 per cent barley, 20 per cent wheat, 20 per cent cracked yellow corn and 20 per cent milo. Green feed consisting of cut alfalfa during the fall and cut barley in the winter is fed at 9 a. m. in sufficient quantity to last all day.

Experimental Pens

Any one who wishes may contribute two pullets for the experimental pens which are designed to test the comparative value of meat and milk and also of the various milk products.

Pen 1 will be fed the same ration as the birds in the contest, except that the mash contains 15 per cent beef scrap instead of 7½ per cent each of beef scrap and fish scrap. This is the check pen for the other experimental pen.

Pen 2 will be fed condensed buttermilk diluted to the equivalent of fresh buttermilk instead of meat or fish in the mash. The ground grain of the mash will be before them in hoppers and the buttermilk in crocks.

Pen 3 will be fed the same kind of buttermilk diluted according to manufacturers' directions, a more diluted preparation than that given to pen 2.

Pen 4 will have fresh buttermilk in crocks, with the ground grain in hoppers, like 2 and 3.

Pen 5 and pen 6 will have before them two different kinds of condensed buttermilk diluted according to manufacturers' directions. The mash used in these pens is the same as that of the contest layers and the purpose of the experiment is to determine the tonic value of the buttermilk.

Pen 7 will have dried skim milk in place of the meat in the mash.

Pen 8 will have granulated milk albumen instead of meat.

Carried on through the year's feeding these experiments will be of very great value to all the commercial poultrymen of the state and will be watched with keen interest.

Poultry Queries

(Conducted by Jean A. Koethen.)

Overfed

Three of my hens squat on the ground and act dizzy if we try to catch them. They look well and eat fairly well. I feed in the morning a dry mash of bran, ground wheat, ground corn, O. P. meal and beef scrap, with light feed of whole wheat; at noon whole wheat and barley; at night mash wet with water, all they will clean up in 30 minutes and whole wheat and barley; for greens, soaked alfalfa meal.—Subscriber, Fallbrook.

Your hens may have intestinal worms, but they are certainly getting too much grain and too little greens. Alfalfa meal is a very poor substitute for succulent greens such as alfalfa, kale and barley. Keep the dry mash before them all day and give one good feeding of mixed grain at night, enough to make sure that a little is left for morning. Give all the green feed you can and omit the wet mash except as a vehicle for an occasional dose of Epsom salts. The whole flock will probably be better off if you give them at least one good dosing. Dissolve the salts in water, half a teaspoon of salts for each bird, and mix with a small amount of dry mash. The pullets will eat it eagerly if they are fasted a little first.

1000 Eggs in Every Hen

New System of Poultry Keeping—Get Dollar A Dozen Eggs—Famous Poultryman
TELLS HOW

"The great trouble with the poultry business has always been that the laying life of a hen was too short," says Henry Trafford, International Poultry Expert and Breeder, for nearly eighteen years Editor of Poultry Success.
The average pullet lays 150 eggs. If kept the second year, she may lay 100 more. Then she goes to market. Yet, it has been scientifically established that every pullet is born or hatched with over one thousand minute egg germs in her system—and will lay them on a highly profitable basis over a period of four to six years' time if given proper care.
How to work to get 1,000 eggs from every hen; how to get pullets laying early; how to make the old hens lay like pullets; how to keep up heavy egg production all through cold winter months when eggs are highest; triple egg production; make slacker hens hustle; $5.00 profit from every hen in six winter months. These and many other money making poultry secrets are contained in Mr. Trafford's "1,000 EGG HEN" system of poultry raising, one copy of which will be sent absolutely free to any reader of this paper who keeps six hens or more. Eggs should go to a dollar or more a dozen this winter. This means big profit to the poultry keeper who gets the eggs. Mr. Trafford tells how, if you keep chickens and want them to make money for you, cut out this ad and send it with your name and address to Henry Trafford, Suite 243-C, Court Bldg., Binghamton. N. Y., and a free copy of "THE 1,000 EGG HEN" will be sent by return mail.

Easy Now to Get Rid of Lice and Mites

Startling New Discovery Eliminates These Pests Without Dusting, Spraying or Dipping

Any poultry raiser can easily and quickly clean out Lice and Mites by using a new Remedy recently discovered by a Kansas City Chemist and called Imperial Lice & Mite Remedy.

All that is necessary is to occasionally put a few drops of this amazing remedy in the fowl's drinking water. It renders them immune from the attack of all blood-sucking parasites, as these pests positively will not stay on a fowl taking this remedy.

It also acts as a splendid Tonic and Blood Purifier, as well as increasing egg production and growth, for with these pests eliminated, hens lay better and young stock grows faster. It is positively guaranteed not to affect the meat or eggs.

The manufacturers of this wonderful remedy are anxious to get it quickly introduced among poultry raisers everywhere, and make this Special Introductory Offer: Send no money, just your name and address to the Imperial Laboratories, Room 522, 2110 Grand Ave., Kansas City, Mo., and they will send you a regular full sized $1.00 bottle and will also send you free a big, full sized (double strength) $1.00 package of Imperial Egg Tonic, the guaranteed egg producer. Pay the postman only $1.00 and a few cents postage when both packages are delivered. If, after 30 days' trial you are not satisfied with results just say so and your money will be cheerfully refunded.

Gill
One-piece Piston Rings
keep spark plugs clean

Because: they are *individually* cast from a special gray iron that resists the ravages of heat and retains its elasticity through the most trying piston ring service; because they maintain unfailingly a snug, all-around, leakless contact with the cylinder walls through thousands of miles of usage; and because they have a leakless joint that stays leakless.

Oil does not work up past Gill One-piece Piston Rings; and as a result spark plugs are kept clean.

Molting Pullets

What is wrong with my R. I. Red pullets? I have 80 hatched in February and March. The February pullets began to lay at 4½ months but are now molting and have nearly stopped laying.—Subscriber, Fallbrook.

February pullets almost invariably molt in the fall. The only possible preventive is to hold them back from laying until they are well grown and fully developed. All you can do now is to feed them well, using a mash moistened with sour milk in afternoon or evening in addition to the dry mash which is always before them, a full feed of mixed grain at night and as much green as possible during the day. A little linseed meal added to the mash and some sunflower seed in the scratch may hasten the molt a little, but your main reliance must be on abundant feeding.

CALIFORNIA FARM BUREAU EGG LAYING CONTEST AT SANTA CRUZ

The 1921-22 contest is starting on the initial lap of the 12 month stretch with a total of 63 entries while the 54 entries in the fast closing 1920-21 contest, now hardy veterans, are straining over the last monthly lap in a final spurt for a big prize.

With the flashing on of the lights at 5 a. m. Saturday morning, October 1, the 756 incoming pullets settled into the egg laying harness with such a zest that a special deputy had to be placed on duty for the sole purpose of patroling the pens and putting pullets showing signs of wanting to lay on the nests so that they will quickly become used to the nests and the floor eggs be reduced to a minimum.

September, the tenth month of the 1920-21 contest, ended with the contest flock averaging 34.3 per cent, bringing the average production per hen for the 334 days, ending September 30, up to better than 176 eggs. Hanson's pen increased its lead over the second high pen during September and started on the last lap with a lead of 111 2-3 eggs over Gibson's pen. S. L. Gibson's pen climbed into second place over George Gray's pen, forcing Gray and Marshall into third and fourth positions and Hollywood pen moved up into fifth place.

Electric lighting was again resumed at 5 a. m. September 18 and is used in the morning only.

The feed consumption for the month has been 8.3 pounds mash and 8.1 pounds grain ration.

The leading pens to date are: Hanson's Poultry Farm, Corvallis, Oregon, 2291 2/3 eggs; S. L. Gibson, Santa Cruz, 2180; George Gray, Santa Cruz, 2171; W. H. Marshall, Santa Cruz, 2158 2/3; Hollywood Farm, Hollywood, Washington, 2120 2-3, A. W. Ford, Umatilla, Oregon, 2110; Gibson, 2080 2/3; Warren Wood, Santa Cruz, 2056; Gibson, 2005 1/3; Alex Stewart, Santa Cruz, 1979; H. C. Kleinsmith, Hoff, Oregon (Barred Rocks), 1961 2/3; O. A. C. (Barred Rocks), 1956 2/3; C. E. Hyde, Seabright, 1953; W. J. Neef, Santa Cruz, 1948; La Rita Poultry Farm, Santa Cruz, 1942 2/3; D. B. Walls, Petaluma, 1917; E. L. Spacher, Santa Cruz, 1913.

Ten high hens to date: Hollywood Farm, 273 eggs; O. A. C. (Barred Rocks), 264; O. A. C., 260; Hanson, 259; Hanson, 254; Crewdson, 251; Hollywood, 251; Gray, 248; Kleinsmith (Barred Rocks), 249; Gibson, 248.

Hanson's pen won the blue ribbon for high pen for September with a production of 192 eggs.

The high pens for September are: Hanson, 192 eggs; Kleinsmith, 180 1/3; Walls, 166; O. A. C. (Barred Rocks), 164 1/3; Neef, 164; Gray, 161 1/3; Gibson, 157 1/3; Gibson, 152.

The ribbon awards for highest individuals for September were again closely contested for, 5 hens tying for third place. The awards follow: Walls, 26 eggs, first; Walls, 25, second, and Hanson, Kleinsmith, Wood, 24, third. All birds, unless otherwise indicated, are S. C. White Leghorns.

Fractional figures in pen records result from apportioning floor eggs equally between the three entries in each pen.

What You Lose
in using cheap paint—do you know?

GOOD paints require much thought and time in their preparation. That is why you should insist upon puchasing paints that have a reputation.

We make good paints like this—*to save you money;* and we call them Fuller's Specification Farm Paints because we have made them especially for farm use.

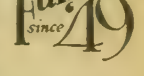
We use Pure PIONEER LEAD, pure linseed oil, zinc and color in scientifically exact proportions, arrived at through 72 years' experience.

The lead is made so fine that it will pass through a silk screen of 40,000 meshes to the square inch. That means covering capacity and ease of spread.

A special device super-purifies the lead, making it "whiter" so Fuller colors are exceptionally clear-toned. All ingredients are thoroughly mixed in specially designed machine, so the paint is always uniform.

The result on the house or barn is an elastic, tough, protective coat that stays five or more years, keeping the wood like new.

Some figure paint economy as "cost per gallon." That is wrong. For "Cheap" paint doesn't cover so much surface—you buy more *gallons.* "Cheap" paint spreads less quickly and you have more labor cost. So "cheap" paint applied is no less expensive than the best.



"Cheap" paint on the average starts cracking in twelve months while the best paint stays intact five or more times longer, if properly applied. Figure then the cost per year of *service* and decide how much you lose when you use cheap paint. Don't allow surfaces to rot. It costs less to paint them.

All "Fuller" Specification Paints are made the costlier way for your economy. Be sure you get them when you paint.

Fuller's SPECIFICATION Farm Paints

House Paint - Barn & Roof Paint
Wagon Paint - Rubber Cement Floor Paint

M'f'd by W. P. Fuller & Co.

Pioneer Manufacturers of Paints, Varnishes, Enamels, Stains and PIONEER WHITE LEAD for 72 Years.

Established 1849 San Francisco

Branches in 16 cities in the West—Dealers everywhere

Also makers of All-Purpose Varnishes, Silkenwhite Enamel, Fifteen-for-Floors Varnish, Washable Wall Finish, Auto Enamel, Porch and Step Paint and PIONEER WHITE LEAD.

Mail the coupon and we'll send you a free copy of "Save the Surface," a book that tells why good paint is important.

Read it before you paint. Read it now though you may have decided to put off painting for another year.

Send coupon for it. Also get our booklet of Fuller Paints and Varnishes for farm use.

Ask our Specification Department for free detailed advice on any question about painting.

W. P. Fuller & Co.
Dept. F-35 San Francisco.

Please send me, without charge, a copy of "Save the Surface" and your small booklet of farm paints and varnishes.

Watching for the ring around the moon

WHEN a crop is dependent on the availability of water in a certain period of time, sky-gazing for the ring-around-the-moon rain omen is not a happy pastime.

The modern, direct motor drive pump has done more than anything else to banish this superstition of past ages away from the farm.

A Byron Jackson centrifugal will do more than make a ring around the moon for you. It will produce water whenever and in whatever quantities you may need.

—and don't forget the Byron Jackson service

CITRUS FRUITS

Grapefruit: Supplies moderate, movement moderate, market firm. Local: market pack mostly 3.50@4.00; poorer 3.00; special packed, 4.00@4.50.

Lemons: Supplies liberal. Demand moderate, market weak. Locals: special pack mostly 5.00@5.25; market pack, best, 3.50@4.00; poorer, 3.00@3.25; loose box, 2.00@2.50; lugs, 90@1.00.

Oranges: Supplies light. Demand mostly 5.75@6.00; market pack, 3.50@4.25; small sizes 2.75; loose boxes 75@1.50; mostly 1.00@1.25.

HONEY

Supplies throughout California are becoming lighter, especially of sage and orange honeys. Most sage and orange stock is in producers' hands in small lots of less than 100 cases. Supplies of alfalfa, although still moderate, are declining. Demand moderate but steady. Market strong with prices advancing slightly. The small crop of fruit in the East, and the high prices of jams now on the market due partly to the high sugar level last year, are considered to be in part responsible for the increased eastern interest in honey. Carloads f. o. b. usual terms: White Orange 11½@12; White Sage 11½@12; Light Amber Sage 8@8½; Light Amber Alfalfa 6@6½, mostly 6½. Several cars of the 1920 crop of California sage, alfalfa and mesquite recently offered, but the supplies of the old crop have become very light.

Beeswax supplies liberal. Growers receiving 20@22 per pound for crude wax.

NUTS

Milo: 100 ton lots, Oct. del. 1.68.

HAY

Alfalfa Growers of California report:

The market for alfalfa hay continued firm and active during the week under a good general demand. The recent rains did no extensive damage excepting in the Imperial Valley.

Receipts in the Los Angeles market are picking up.

There were 880 tons of grain and alfalfa hay received on the Los Angeles tracks the week ending October 8, with 180 tons held over.

Prevailing prices, delivered in vicinity of Los Angeles:

Choice Rabbit Alfalfa	$28.00
Choice Dairy	25.00
No. 1 Dairy	22.00
Standard	17.00

Quotations by Nichols-Loomis Company. Following are prices to growers f. o. b. Los Angeles in carload lots; handling and commission must be added to obtain retail prices on new hay:

Tame Oats	18.00@26.00

Bananas: Eastern, 6@7; Hawaiian, 7@8.

Blackberries: 35@50 per drawer.

Cantaloupes: Flesh tinted, 2.00@3.50 cr.; River, 1.00@1.25 lug. Persian, 1.00@1.25 per small cr., 1.50 large; Honeydew, 75@1.00 per standard crate; Casabas, 50@75 per dozen.

Chestnuts: 25 per lb.

Cranberries: Bx., 5.00@5.50; Cape Cod, 15.00@16.00 bbl.

Figs: Black, double layer, 1.25@1.50; single layer, 75@1.25; do, white, single, 75@1.00.

Grapes: Per crate, seedless, 1.65@1.75; laga, 1.25@1.50; black, 2.50@3.00; fancy, 3.50 per large lug; Tokay, 2.00@2.25 per large lug; fancy, 3.00; Muscat, lugs, 2.00@2.50; fancy, 3.00; wine grapes 85.00@1.00.00 per ton.

Huckleberries: 12½@20 lb.

Peaches: Oregon packers, 1.50@1.75; per small box. Placer County, 1.00@1.15.

Pears: Bartletts, No. 1. wrapped, 2.75@4.00 box; Forelle, lug 75@1.50.

Pineapples: 4.00@4.50 dozen.

Persimmons: 1.75@2.25.

Pomegranates: 85@1.25.

Prunes: Silver, 1.25@1.50 per crate; German, 1.75@1.85 crate; 60@75 small box.

Quinces: 1.25@1.50 lug.

Raspberries: 60@85 per drawer.

Strawberries: cr.. 1.25@1.60; dr., 65@75.

Watermelons: 1.00@2.50 doz.

Mexican Reds	6.00
Red Kidney	7.40
Henderson Bush	4.85
Cranberries	5.75
Bayos	5.40
Blackeyes	3.50

HAY AND FEED

Receipts hay during week 911 tons as compared with 1,025 tons of the previous week. While prices have not improved general business is much more active and the volume of sales considerably greater than we have had for some time. As money has been coming to the farmers from the cashing of their crops it has eased up the tension throughout the country districts and also had a tendency to create a sentiment of confidence among the country dealers. Alfalfa has been moving quite heavily although the necessity of shipping before being caught by the rain has made producers in this section anxious to sell with a result that prices have been extremely weak throughout the shipping districts although unchanged on our local market.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the markets in San Francisco (for prices to consumers, charges of switching, cartage, commission and handling expenses must be added, according to conditions).

Citrus Markets

Los Angeles, October 12, 1921.

Oranges are especially strong and occasional spectacular sales are made. Some auction sales have crowded close to $10 mark.

Lemons are easier, especially heavy imports of foreigns affecting the market.

Shipments

Shipments of citrus fruits to date since November 1, 1920, Southern California: Oranges, 39,617 cars; lemons, 11,194; total, 50,811. To same date last season: Oranges 29,533; lemons, 8,019; total, 37,552. From Central California to date this season: Oranges, 6,658; lemons 212; total. 6,870. To same date last season: Oranges, 5,383; lemons, 288; total, 5,671. From Northern California to date this season: Oranges, 305; lemons, 5; total, 310. To same date last season: Oranges, 261; lemons, 23; total, 284.

THE FLOWER SHOW

(Continued from Page 391.)

of electric lights that will make the fountain an hundred fold more beautiful by night than by day In addition to this the outer basin is filled with water lilies in bloom, whose growth and glory is accelerated and increased by steam pipes from the special underground power plant. At night this gigantic water display will have the general effect of a glass dome of great height. Around the border of the garden various landscape designers have wrought unique and spectacular features. O. W. Howard will show his conception of the "Wee Hoos 'Mang the Heather," as described by Harry Lauder in the famous Scotch song of that name. A bagpipe band and Scotch singers will be on hand to further entertain the visitors. Mon! Mon! Ye dinna ken the joy o't.

The main indoor flower show will be in a huge tent 130 by 250 feet opposite the main entrance on Exposition Boulevard. The entrance booths will be through the body of a huge floral basket 30 feet high and inside the lights will emanate from immense colored reproductions of flowers—roses, poppies, tulips, etc., held aloft by pedestaled female figures 12 feet high, designed somewhat after the famous Statue of Liberty on Bedloes Island, New York Harbor. The trade exhibits proper will be under another huge canvas 130 by 280 feet, the court of the State Armory Building. All three gigantic features are continuous; the visitor passes from flower and plant show to trade exhibit and from there directly into the seven acres of blossoms. More money and men have been used in the preparation of this flower show, doubtless, than the total amount and number heretofore utilized in all the shows of this character yet held in California and the management has anounced that it expects a total of 200,000 visitors to pass through the gates. There is no doubt that in extent and variety of exhibit it will also equal many combined of the largest shows of the past held in San Francisco, Los Angeles, etc. For the first time in history the whole state contributes its best.

New Lamp Burns 94% Air

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, V. N. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

New Irrigation District to be Developed in FRESNO COUNTY

Mutual Husbandry Club Now Being Formed

Land in this Irrigation district may be purchased by members of the Club at the dry land price of not to exceed $50.00 per acre.
Think of the opportunity offered by cooperative pooling of interests.
Big profits should be realized on this land.

Read this page carefully and act promptly. Fill out the coupon and mail for full particulars.

SOIL

The soil of this entire tract is about the same quality, being of a dark brown silt loam of clay formation, of good depth, free from hardpan and alkali, level in its general contour. This land has been farmed to grain for a great many years and is noted for its fertility and high productive powers when irrigated.

ADAPTABILITY

All of this land is so fertile and rich that it is adapted to any kind of crops suitable to this climate, such as figs, raisins, all kinds of deciduous fruits, vegetables, alfalfa and all kinds of grain crops. All the above named require irrigation.

OBJECT OF MUTUAL HUSBANDRY CLUB

It is the intention to form an irrigation district in Fresno County, under the California irrigation laws, upon soil that has been proved to be exceedingly fertile by the development of several projects irrigated from deep wells and dealing with the same soil as the soil in the proposed district.

AMPLE WATER ASSURED

The sufficiency of the water for the irrigation of the land within the proposed district by gravity has been established by ardent and prolonged studies and investigations on the part of competent engineers who have completed their filings before the State Water Commission upon the watersheds supplying this water. Five hundred thousand acre feet of water can be impounded in natural reservoir sites.

In order to obtain the approval of the State Engineer and other State authorities for the formation of this district the findings of these engineers must be established to the satisfaction of the State Engineer by additional engineering work.

The land in the proposed district can now be purchased at not to exceed $50.00 per acre.

A mutual association, called the "MUTUAL HUSBANDRY CLUB," has been formed for the following purposes:

1. To assist in completing the engineering work necessary to be done to prove to the State Engineer that the proposed project is feasible and to cooperate in every way possible to bring about the formation of the district.

2. To take all necessary preparatory steps for the formation of the irrigation district.

3. The engineers have secured options on land enough within the proposed district to secure for each member of this association from one to forty acres of land. Amount of land up to 40 acres optional with the member.

In order that this association may, in this manner, avail itself of the opportunity to acquire land at the present low price for its members and to be benefited by the substantial increase in value of this land through the formation of an irrigation district under the California irrigation laws, it is necessary that at least 500 members join this association and become landowners and voters able to petition for the formation of this irrigation district.

The Mutual Husbandry Club is assisting the engineers in the formation of this irrigation district, enabling thereby these engineers to participate with the other members in the increased land values and, in return, these engineers are granting the other members of the association the same privileges on a mutual and cooperative basis to buy land at the present low price and be benefited by the increased values.

Each member of the association contributes $100.00 to the association, which, under the direction of five Trustees already elected by this association, is to be expended for engineering and organization work and the optioning up of additional land within the proposed district for the members of this association.

LOAN VALUE

Such portions of the money that may have been expended for engineering and organization work will be refunded by the district, when formed, out of the bond issue to be voted to construct the irrigation system.

The increase in value of the land by the formation of the district will enable the purchasers to borrow any unpaid portion, if they desire.

RISK

The risk incurred in joining this association and contributing $100.00 thereto is the following:

If the State Engineer and other State authorities do not approve of the formation of this district, which would be the case if they found the engineers to be mistaken in their calculations, then such portions of these $100.00 that have been expended up to the time of this decision would be lost to the members of this association; the balance remaining in the treasury would be pro rated among the members of the association.

STATE ASSISTANCE

It should be remembered, however, that if the State Engineer and other State authorities find the project feasible and sanction the formation of this district, it becomes their duty to assist in every way possible to foster this district upon the principle that the State of California desires fertile land to be irrigated and to make use of any and all available water for that purpose.

INCREASE OF LAND VALUE

If the district is sanctioned, the holdings of each member of the association, in our opinion, are materially increased in value, even before the work of constructing the irrigation system has begun.

The land in question is subject to the most intensified cultivation and can be brought up to the highest valuation of any land in this State.

There is no better grape or fig land anywhere in this State of California and, altogether, this is a good risk to obtain a valuable piece of land.

The irrigation district will be developed in three or four units, and the land of the members of this association will be the first unit.

The least you can buy such land as this for in an irrigation district formed under the Wright Act, in a raw state, is $250.00 per acre, and possibly more. Now you are getting it for $50.00 per acre, because you are helping to form the district by your votes.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

If among the more than 40,000 Cultivator's weekly circulation any fail to find any article they desire to purchase advertised in the Cultivator's columns, a special request is extended you to let your wants be known to the California Cultivator and we will place you in touch with proper parties.

EDITORIALETTES

Humboldt County holds the cover this week. There are the redwoods and the rich pastures and the richer Guernseys. The herd there shown is one of the first to become a member of a cow testing association in California. This was in 1909 when the Ferndale Cow Testing Association was organized. Mr. Rasmussen, the owner of the herd, enrolled his entire bunch of 123 cows. The first year of test showed 227 pounds average fat. It resulted in a number of the cows being sent to the butcher and a raising of the average to 279 pounds fat. The grading up continued until now Mr. Rasmussen demands of every cow at least 350 pounds fat in ten months, and there are 28 grades and pure bred Guernseys now in his herd who have an average production of 511 pounds. Hence our remark above as to Humboldt's rich pastures and richer Guernseys. We are indebted to the Guernsey Breeders Journal for use of the engraving.

* * *

Humboldt County continues as Cultivator purse winner in the state dairy cow competition. The southern end of the state pulled away everything for the first few months of the contest, but the extreme north has claimed nearly every prize during the last six months. Nate Hauck of Alton is the September winner. Prof. Woll's account of the performance of the five grade cow winners will be given in next issue.

* * *

The Ohio experiment station has definitely established that lazy mid-winter hens routed out at three or four o'clock in the morning by turning on the electric lights will lay more eggs than those who remain on the perches and sing: "It's nice to get up in the morning but it's nicer to lie in bed." The station has also discovered that these same hens won't stand the strain of the extra production unless they are given a long fall vacation with plenty of sustaining extra food. This only helps to establish the law that nature has its limitations excepting under special coddling. The station's conclusion is: "The more they eat, the more they'll lay, but to force production without supplying additional food is to defeat the sole purpose of lighting."

* * *

It's a good idea to clean up the weeds which may be harboring aphis or other expensive insects and it is usually recommended that all weeds be burned, but if they can be gathered and piled with ashes, leaves, dirt, garbage from the table, manure and refuse generally, with an occasional layer of dirt, there is no reason why a fine compost of dirt should not be secured. If properly kept moist, worked over and thoroughly decayed, there will be no danger of scattering weed seeds or insect pests.

* * *

Speaking of bugs, they cost us a billion a year (that is not an editorial "us"). The department of agriculture has made an approximation and finds that with grasshoppers eating a 50 million dollar meal; chinch bugs, 60 million; Hessian flies, 40 million; corn ear worm, 20 million; boll weevil, 20, and on down the line to our little old San Jose scale presenting a board bill of ten million, the grand total of $1,100,000,000 is reached. In fact, the farmers obey the old Mosaic law and tithe unto the insects, for it is estimated that at least one-tenth of all the crops in the Unied States is required to support insect life. Strength to the arm of the state department of agriculture and to the federal department, which are seeking for the beneficial insects which will help us to control these which cause such great damage.

* * *

Another statement which startles almost as much as this aggregate contribution we make to insect life, is that "of American cattle 97 per cent are scrubs." We don't believe Californians are prepared to admit any such percentage of scrubs in this state, but doubtless if we knew as definitely as some members of the cow testing associations know what their animals are doing we might be startled to find the number of boarders in California.

* * *

A writer in "History of Agriculture" has suggested that "The man who improves the livestock of a community or gives it a better variety of corn is as deserving of praise as he who 'plucks glory from the cannon's mouth.'" It may be, but we continue to beat our plowshares into swords. We are hoping the coming of Armistice Day will result in starting the job of melting over our armaments into implements of agriculture.

PLACER COUNTY PLAN

Placer County claims a plan of its own in the ousting of Japanese or, rather, in a very quiet movement of replacing Japanese tenants with white folks, folks who will upbuild the community and fill the schools with white children. Placer County is, or at least was, one county in the state in which leasing of orchard properties to Japanese was a common practice. Most other sections confined their dealings with Asiatics to leasing potato or truck farming lands. Many orchardists of Placer County, however, continued leasing to Japanese until the situation became alarming. We now note in a statement issued by the Placer County chamber of commerce that "at the present time a number of Placer County fruit growers are ready to rent their properties. This presents an opportunity to experienced white fruit growers to obtain a home in the wonderful Placer County fruit growing belt"

CONVENTION WEEK

The conventions are on. Director Hecke of the state department of agriculture is in Los Angeles completing details for the convention which opens next Monday morning. There are some live topics up for discussion, chief of which are legislation and water transportation.

Meantime the nurserymen's convention is in full swing. California is the nation's greatest nursery state and has the most effective of all state organizations amongst nursery people. Besides talking shop the nurserymen are discussing the larger questions of horticulture affecting the Pacific Coast, and it is expected that a new impetus will be given to the bud selection movement. Avocado men have the entire day of Saturday, ending this first week of the convention in a great banquet at the Ambassador.

The Fruit Growers convention banquet is to be held on Tuesday evening, October 25, at the City Club, corner Broadway and Eighth Streets, at 8:30. Governor Stephens will be guest of honor and it has been hoped that Secretaries Wallace and Hoover may be present but definite acceptance has not been received from them. Noted speakers will leave no dull moment.

The week closes on Wednesday with horticultural commissioners in charge of the entire day's program.

The Flower and Horticultural Show is one of the handsomest shows ever staged. It will continue through the two convention weeks.

MARVEL OF WORLD

The growth of a large city may be of little concern to most readers of the California Cultivator, but we are going to refer to the wonderful growth of the city of Los Angeles purely for the sake of enforcing a truth which it seems hard to get our own California people to appreciate. That truth has to do with the upbuilding of this great state.

As an indication of the rate of growth of that city let us call attention to the fact that the cost of new buildings there aggregated about a year ago between two and three millions of dollars each month. This has gradually increased until five and six and seven millions per month has been chronicled as the cost of those buildings and they are mostly of cottages to house home makers coming from other states. It is now estimated that the cost of homes to be built during the month of October will aggregate nearly eight millions of dollars.

Why this increase which has been termed the marvel of the world? And one who has investigated answers, "Water and hydro-electric power supplied by the city at low rates." This power has been secured because of a 240 mile aqueduct which cost about 25 millions of dollars (and power plants costing possibly 15 millions) carrying to the city 272,000,000 gallons of water daily from the slopes of Mt. Whitney.

Los Angeles has pointed the way and is now urging a greater industrial and agricultural development of the entire Southwest by asking the cities, towns, communities and farming districts to join with that city and the federal government in building the great Boulder canyon project on the Colorado river. This gigantic project, under public ownership, will benefit all of the people of the Southwest and will in no way injure the rights of the people along the upper portion of the Colorado river and its tributaries.

Public utility corporations will not—cannot—make as low rates as can municipalities or communities cooperating in the development and distribution of hydro-electric power. Then why do not our people awaken and act?

Los Angeles proposes that in Boulder canyon on the Colorado river a dam shall be constructed to impound water capable of irrigating 2,000,000 acres of land and providing opportunity for installing hydro-electric power systems capable of generating 700,000 horsepower, and that other cities and communities shall unite in financing and benefiting from the development which will be under the direct supervision of the reclamation service of the United States. The magnitude of this is made apparent when it is understood that the total installed horsepower within the boundaries of all California today totals only 1,107,139.

Arthur P. Davis, director of the reclamation service, has reported to congress as to the great wealth possible because of this development, and its feasibility. This scheme is interstate and even international in scope and will call for patience and energetic action on the part of the people of the state to bring it about. There are others much simpler and yet with wonderful possibilities, and all within the boundaries of California, in the mountains all the way from Modoc to San Diego.

Let us get under the Marshall plan or any other plan which permits cooperation in the development of California's resources. Thirsty lands need the impounded water, while other thirsty lands underlaid with water need the power to lift it to the surface. If the people do not take advantage of the opportunity now before them public utility companies will, and this will means the state's upbuilding but with less of net return to the producers.

Since the above was put in type the daily press makes announcement in most obscure corners: "According to advices from Washington, Secretary of the Interior Albert B. Fall will come to San Diego the first week in November, if this date is acceptable to all concerned, to meet in conference with representatives of Southern California, Arizona and Nevada to make definite plans for early starting of work on the Boulder Canyon dam project. The Boulder Canyon project was discussed by the president and Secretary Fall at great length and the president gave his enthusiastic indorsement to federal building of the great dam."

California Cultivator

Vol. LVII, No. 17 | Los Angeles, October 22, 1921 | One Dollar Yearly

California Livestock and Horse Show

San Francisco has come back. She held a livestock show, then last year she lapsed. This year she is opening on Saturday of this week the livestock show declared to be worthy of the great city which promotes it. C. N. Hawkins is president of the organization promoting the show, C. R. Thomas, general manager, and John A. Bunting, secretary. There are four acres under canvas, and the management announces the finest herds of Shorthorns, Herefords, Aberdeen-Angus ever exhibited will be among those present. The exhibitors are:

Shorthorns

Howard Vaughn, Dixon, 4. Ormondale Ranch, Redwood City, 10. Easton & Ward, Diablo. W. M. Carruthers, Live Oak, 8. Caledonia Farms, West Sacramento, 17. William Bond, Newark, 4. Thomas T. Miller, Hollister, 10. T. S. Glide, Davis, 15. Estate Thomas B. Dibblee, Santa Barbara, 10. Straloch Farm, Woodland, 7. Pacheco Cattle Co., Hollister, 14. University of California, Davis, 1.

Herefords

University of California, 2. Mission Hereford Farms, Mission San Jose, 8. John A. Bunting, Mission San Jose, 3. Harry Thiessen, Sweetwater, Idaho, 12. A. B. Cook, Townsend, Montana, 17. W. D. Duke, Esparto, 1. H. H. Gable, Esparto, 4. Wm. Briggs & Sons, Dixon, 10. Charles Rule, Jenner, 4. H. A. Baldwin, Pleasanton, 2. Sierra Vista Vineyard Co., Minturn, 4. Diablo Stock Farm, Danville, 6. J. B. McNerney & Sons, Carlton, Oregon, 13. A. M. Barnum, Moro, Oregon, 11. Romie C. Jacks, Monterey, 20. C. S. Howard, Willits, 6. Frank R. Howard, Willits, 1. H. M. Barngrover, Taylorville, 16. J. H. Cazier & Sons Co., Wells, Nevada, 11. Ken Caryl Ranch Co., Littleton, Colorado, 12.

Aberdeen-Angus

F. F. Peabody, Santa Barbara.

Fat Steers

University of California, 3.

Holsteins

Bridgford Holstein Co., Patterson, 13. A. W. Morris & Sons Co., Woodland, 12. E. Swift Train, San Francisco, 1.

Jerseys

Guy H. Miller, Modesto, 11. J. E. Thorp, Lockeford, 20. M. Fortini, Oriand, 2. Harold Mordecal, Petaluma, 1. Oscar B. Peterson, Sebastopol, 1. Newton M. Peterson, Sebastopol, 1.

Guernseys

A. B. Humphrey, Escalon, 16. Brant Rancho, Owensmouth, 12.

Ayrshires

Woodside Farm, San Francisco, 6. Alta Cresta Farm, Spencer, Massachusetts, 33.

Milking Shorthorns

Alexander & Kellogg, Davis, 16. R. Heckley, Santa Rosa, 1. Santa Rosa Stock Farm, Santa Rosa, 12.

Percherons

Miller & Lux, San Francisco, 9. University of California, 7. Romie C. Jacks, Monterey, 16.

Belgians

Ratto Stock Farm, San Francisco, 9.

Shires

Easton & Ward, Diablo, 12.

Clydes

Est. of T. B. Dibblee, Santa Barbara, 7.

Shetland Ponies

Frank R. Howard, Willits, 5.

(Continued on Page 431.)

Harnessing Unused Energy

Address by Arthur S. Bent Before Metropolitan Club, Washington, D. C.

HARNESSING unused energy is a pretty big and indefinite topic, and has doubtless already stirred your imaginations in many directions. My own first thought was how miraculously, overnight, life would be changed, if human energy could be conserved and coordinated completely. But my subject has a simpler and more feasible aspect than that. The stupendous possibilities of the unused natural energy about us have inspired men of all times from Archimedes, who cried out for standing room while he moved the earth, down to our old friend, Bill Nye, who proposed to condense water over in Oregon and send it to Arizona, there to be diluted for irrigation purposes. Rather impractical schemes, both of them, we'll say.

The uncaught forces of nature are still on every hand, but when we consider how our Morses and Marconis and Curies and Edisons and Wrights and Burbanks are seizing and harnessing them for our use, it seems impossible to overdraw the picture of the world's future.

The story of man's progress in the past has been one of sudden, vivid chapters closely linked up with the harnessing of each new energy from fire to radium.

Consider transportation. Up to 1830 it was practically unchanged from the days of Alexander the Great. My forebears went West by ox team. Then came steam, and suddenly, after having painfully crept only as far West as the Missouri in nearly 200 years, we leaped the rest of the way to the Pacific Coast in decades. H. G. Wells recently said that "Without railways and telegraph it would be easier to administer California from Pekin than from Washington." We know that if our railways should stop, this great nation would fall to pieces, fall into little states, and become what Europe is today. Well, then, how are we going to keep our railways running?

Great Power Wasted

I was born in the heart of the high Sierras, and so to me unusued energy inevitably has one outstanding aspect, water power, and its concomitant, irrigation, and I marvel today as I did 20 years ago, that we waste our precious birthright of fuel energy, while our great Western streams run for the most part unharnessed and destructive. Coal and oil are literally money in the bank, but our streams are unused energy, and in perpetuity.

It seems to me a fatuous pride that boasts of our material achievements of the last 50 years, when as a matter of fact most that we have accomplished has been at a bankruptcy cost. We have burned down our house to warm our hands. We have been the "Coal Oil Johnny" of the nations scattering in a few hours the accumulated natural wealth of ages.

And now the end of our priceless legacy is in sight. Our forests are dwindling and we have not replanted them. We can count the coal left in our cellar. We are already wondering what we are going to do for gasoline and for lubricating oil. Germany might have lost the war for want of lubricants. And yet we burn and burn and burn, while 50 millions of horsepower runs continually to waste. Gentlemen, that awful fire burning day and night should be put out. The great army of men who feed it should be disbanded and their energy, harnessed to that of the water and the soil, be turned from destruction to production.

Roughly, it takes 1,000 tons of coal per hour to develop a million kilowatt hours of energy. Disregarding the waste of irrecoverable coal, just consider the army of miners required to produce it. Yet three million kilowatt hours can be developed by the Colorado River alone in only 110 miles of its course. The same energy that the labor of one man produces by water, requires 16 men to produce by fuel. There's a 16 to one idea well worth our consideration.

Just think! In the United States this very 24 hours 43 million horsepower was developed with our precious fuel, while 52 million hydro-horsepower slipped by us unharnessed into the seas. And of the labor involved in this production, 15/16 was wasted. That waste meant roughly: Eight hours each for 10,000 men and this means interest on a capital of $300,000,000.

And even this takes no account of the fact that a large percentage of the transportation power of our railways is expended to haul coal for their own use.

A good prescription for national prosperity, I take it, is a proper balance between raw material, labor and capital. What account of this balance has our power development program taken thus far?

It is pretty widely agreed that the Pacific Coast is to be the center of the greatest drama of history. In that favored and portentous region lies 50 per cent of the potential hydroelectric power of the country. When we should be conserving and preparing this strategic region for its great destiny, we are wasting its resources and tearing down its defenses.

Power Problem Acute

In my own state of California we have one million horsepower developed and digested, and during the war this was all pooled by intercommunication and is now available at practically every point in the state. This is good. But we have at the same time three million of potential power not touched, and this is bad. The situation with us is acute. We are burning the precious oil which should be saved for our navy and marine, and still we are short of power. Our normal growth will absorb this entire four million in 15 years, and if the steam roads electricize, as they eventually must, it will all be needed in ten years, which is none too long a time to carry out such a vast development program. We can finance it—750 millions in the next eight years, but we must have back of us an enlightened public opinion and helpful federal and state legislation.

It must be remembered that private profit frequently does not coincide with social gain. The relation between the usefulness of a work and its remuneration is often remote. And since we cannot safely consider the care of society's needs as a by-product of individual enterprise, it behooves us as a nation to see to it that the way is made easy and not hard, when private or community capital seeks such essential and beneficent avenues as the development of water power, irrigation and flood control.

The Southwest is turning now to the Colorado River, where many of the best dam sites are within the Grand Canyon Park. It happens that the national parks of the West are mainly on the roof of the country where the great waters have their source and thence tumble idly to the valleys below. The beauty of these parks should not and need not be destroyed, but it is a poor conception of our duty to posterity which fails to utilize these streams for the development of a great and prosperous civilization.

Usefulness Pointed Out

In the case of the Grand Canyon of Arizona, its splendor and availability will be enhanced when we can not only gaze into that stupendous gorge from the two or three accessible points on its rim, but can also ride between its mighty walls for miles over beautiful lakes.

And, of course, when we harness these streams to our impulse wheels, we also make them available for irrigation, storing up their disastrous floods against the dry season when their waters are needed—a by-product which of itself is worth the entire cost, and is not less vital to our development.

In my lifetime I have seen the desert which Southern California once was blossom into the garden it is today, by the simple process of harnessing its wasted waters to the soil. When the Colorado River is reservoired it will irrigate three million acres of now arid land, transforming deserts into prosperous communities and adding immeasurably to our national wealth.

Here, then, lies at our hand, particularly in the West, the obvious first answer to the problem of harnessing unused energy. Water power, the cheapest known to man, clean, concentrated, inexhaustible so long as nature functions, the last word in prime movers; and its beneficent corollaries, irrigation and flood control.

These days will doubtless be known to history as the water power age, and will mark, here in America, the highest development of the human race. In this inspiring program, we contractors will play a leading part, for it is our hands that will buckle the harness to this vast energy. So it is fitting that we should take stock of ourselves.

Agricultural News Notes of the Pacific Coast

Northern California

Lodi grape growers report sale of Zinfandels at $140.

During the week of September 14-20 2906 carloads of grapes were shipped from California.

Tokay grapes from Lodi, San Joaquin County, have been bringing $2.27 per crate in Chicago.

Ralph P. Merritt has been elected president and manager of the Pacific Rice Growers Association.

Colusa County has determined to enforce the law against the overloading of trucks on county highways.

Civil service examination for forest rangers will be held October 25 at each forest supervisor's headquarters.

Olive growers of Placer County have formed a cooperative marketing association with Wm. F. Ketts president.

Short courses in animal husbandry at the university farm at Davis, which closed today, have been well attended.

A short course in dehydrating of fruit will be given at the farm school at Davis, November 28 to December 10.

The Placer County Herald chronicles increasing number of leases made to white farmers of lands formerly leased by Japanese.

Manager Inman of the Pacific Rice Growers warns growers not to contract their 1921 crop as prices are already advancing.

Manager Coykendall of the California Prune and Apricot Growers says that practically all of the 1920 crop of beans is cleaned up.

The state highway commission has called for bids on construction of the 18 mile stretch between Auburn, Placer County, and the Grass Valley road.

A public auction sale of state scrip will be held by Surveyor General W. S. Kingsbury at the state capitol, Sacramento, Monday, November 7, 1921, at 10 a. m.

The fall conference of the North Bay Counties district was held in Santa Rosa October 5, directors and advisers talking over plans for the fall and winter campaign.

The Central California Milk Goat Breeders' Association held an all day meeting at Berkeley October 8. Sessions were held in Hilgard Hall on the University campus.

Trinity County supervisors have asked the state fish and game commission to remove obstructions in Mad river which keep fish from ascending or to put in fish ladders.

County Horticultural Commissioner Ladd of San Joaquin reports that the heaviest plantings in fruit trees last year were of figs, 88,649 trees. There was also a very heavy planting of table and wine grapes.

Horticultural Commissioner Brosius of Sacramento County is making a careful survey of spread of Spanish measles in vineyards. Harry S. Smith of the state department of agriculture is cooperating in the work.

The Bodega Cooperative Hog Association, Sonoma County, met at Bodega Hall last Saturday. The officers are: E. H. Cheney, president; J. A. Gobbi, vice president; Tom Keefe, treasurer; John Comotta, director; R. T. Kee, secretary and manager.

Central California

The Stanislaus County Poultry Men's Association will hold a show at Modesto December 4-7.

A squirrel poisoning campaign has been completed in the eastern section of San Joaquin County.

The annual meeting and picnic of the Fresno County farm bureau will be held at Kearney Park October 27.

Watsonville, Santa Cruz County, hopes to secure one of the tractor schools conducted by the state university.

The Delano district of Kern County will plant 350 acres to lettuce to come in after the Imperial crop is off the market.

The quarterly convention of the Stanislaus County Farmers Union was an all day session at Patterson high school.

The Strathmore Cooperative Packing Company has its buildings nearly completed and machinery is being installed.

Farm home department meetings will be held in Kern County at Kern-Delta, October 25; Wasco, 27; Edison-Fairfax, 28.

Farm bureau meetings will be held in Kern County at Shafter, October 26; Arvin, 28; board of directors at Bakersfield, 29.

Mrs. Hope Baxter has been appointed home demonstration agent for Stanislaus County. She took up her work October 7.

The San Joaquin County Fair Association has decided to hold its 1922 fair the week before the state fair at Sacramento.

Pomegranates are going forward from the Lindsay district of Tulare County. The output of the district is estimated at 75 carloads.

County Horticultural Commissioner Currier of San Benito County has resigned his office and will act as entomologist for the San Jose Spray Company.

At the October meeting of the Stanislaus County farm bureau it was reported that Modesto's objectionable truck ordinance would probably be repealed.

The new Puccinelli dehydrator at Robertsville in Santa Clara County is being visited by many prune growers who are interested in the new method of drying their fruit.

A step in the solution of the problem of feeding and housing fruit workers during the orange packing season in Lindsay, Tulare County, is the establishment of cooperative dining rooms.

The Lindsay plant of the California Associated Olive Growers has passed into the hands of the Virden Packing Company. The Virden company will handle the association's output on a four year basis.

Students in dairy industry classes will send several judging teams to Portland at the time of the Pacific International, where they will compete with teams from other states in judging butter, cheese and milk products.

The California Associated Raisin Company announces that it now has signed contracts with growers for enough sweatbox hand sorted layers to fill its 1921 crop orders from the wholesalers and that no more contracts for making layers will be entered into.

Southern California

Yucaipa's apple crop is now estimated at 800,000 boxes.

The beet dump at Wintersburg, Orange County, will close within a few days.

Recent rains at Blythe made it necessary to suspend cotton picking and ginning.

The big walnut packing house at Puente, Los Angeles County, is busy on the new crop.

1,500 acres of pimientos are being harvested in the Garden Grove district of Orange County.

The next meeting of the Southern California State Supervisorial Association will be held in Los Angeles in April.

The Duarte-Monrovia Fruit Exchange estimates the coming citrus crop at 6 to 10 per cent heavier than last year.

The packing house of the American Fruit Growers at Anaheim reports tomato crop in that district only two-thirds of normal.

The retail merchants of Orange County are objecting strenuously to the activities of the recently formed farm bureau exchange.

Manager Hooper of the Carpinteria walnut house says the new grading equipment has enabled cutting force of employes from 20 to nine.

Prices of 1921 walnuts have been raised by the association. Opening price announced ten days ago on No. 1 Softshell, 24½ cents, now 27.

Local farm bureau meetings will be held in Imperial County at McCabe, October 19; Jasper, 21; directors, 22; Alamo-Verde, 26; East Side Sunset, 28; Acacia, 28.

A drainage bond election will be held in the Palo Verde Valley, October 28. The proposed district takes in practically the entire valley outside of Ripley and Blythe.

October 26 marks opening date of the campaign which Imperial County chambers of commerce are staging to encourage settling and planting of idle lands in the valley.

Supervisors of Southern California counties met at Riverside during the Southern California fair and organized an association which will enable closer working together of the seven counties.

Secretary Hathaway of the Ventura County Fair Association reports that 25,000 people visited the fair during the five days, and the surplus in the treasury will amount to some $20,000.

One of the first steps to be taken by the newly organized Southern California branch of the State Supervisorial Association is the adoption of a uniform truck load regulation for the seven counties.

Orchardists of citrus districts of Olive, Buena Park, McPherson and Tustin have organized to oppose plan of the Union Pacific to build a rail line paralleling the Southern Pacific. They say the road is not needed for transportation and it will destroy much valuable orchard land.

Arrangements are being made for the holding of a conference of the League of the Southwest at Riverside the last of November to discuss the big hydro-electric development now before California. The league hopes to have present Sir Adam Beck, head of the municipal hydro-electric power system of the Ontario project.

The Coast and General

Maricopa County, Arizona, will hold a poultry show at Phoenix November 9-12.

Tampa, Florida, citrus growers estimate the crop 5 per cent larger than last year.

Navel oranges are coloring rapidly in the Yuma Valley of Arizona, earlier than usual.

The third cutting of alfalfa is about completed in Utah and Idaho and good yields are reported.

Olive packers of Arizona report picking as getting a good start and the crop as generally good.

The Oregon State Horticultural Society will hold its annual meeting in Forest Grove, December 1, 2, and 3.

The Columbia, Oregon, Jersey club will exhibit a county herd at the Pacific International at Portland November 5-12.

Sweet potato growers of Jacksonville, Texas, have applied to the railroad commission for curing-in-transit privilege.

Lewis and Thurston Counties, Washington, are joining in a project to drain 700 acres in the Zenkler valley north of Centralia.

Up to September 23 shipments of cantaloupes from Colorado amounted to 2754 cars as against 1668 at same time last year.

The Florida citrus fruit season opened September 26 with grapefruit shipments. Oranges will begin to move about November 1.

Sweet potato growers of the Sylvania district of Georgia are planning to build curing plants and store their potatoes for spring shipment.

Faced with the problem of disposing profitably of their alfalfa farmers of Prineville, Oregon, have joined in purchase of two carloads of milk cows.

The Western apple crop is generally good, but poor in most other sections. A late infestation of coddling moth has made many wormy apples in Michigan.

Hop fields near Harrisburg, Oregon, yielded a crop of 2100 bales. Most of the growers sold for from 20 to 30 cents though some holding long contracts received 50.

The Clatsop County fair of Oregon was held on the new concrete dock at Astoria. The space occupied by exhibits was 160 by 500 feet and half of this was devoted to livestock.

Report of the Hempstead, Texas, Melon Growers' Exchange for shipping season shows receipts from sales $73,310.04. Of this freight charges took 54 per cent, or $39,246.40.

State engineer of Washington is making survey of the greater Wenatchee project designed to bring water from Lake Wenatchee to irrigate 50,000 acres of land in the Wenatchee and Columbia River valleys.

Hood River, Oregon, apple growers have had limits put on number of boxes of apples they may load on trucks passing over highways. Unrestricted loading during apple season last year ruined many stretches of roads.

Pasture on the desert ranges of southwestern New Mexico and southern Arizona have improved greatly under the influence of warm days and following recent rains. Pastures at high elevations have cured without injury from frost.

The Valley of Apples

By Ernest Braunton

YUCAIPA may not be a "Valley of Ten Thousand Smokes," for that many firesides are not yet present, but it is a valley of ten thousand acres of apples. Eight thousand of these acres are bearing today and the remaining acreage of young trees is of the best. This year the apple crop will be more than a half million boxes. In three years at present rate of increase it will be a full million boxes.

The one big leader in varieties is the delicious Delicious, but only because it happens to be the best. Other standard varieties thriving equally well are, in the order of their importance: Rome Beauty, Winesap, Arkansas Black, King David, Jonathan, Winter Banana and Rhode Island Greening. In addition to apples the valley grows many pears, principally Bartletts, and these have brought the present season from $90 to $100 a ton. On the lower levels and lighter soils peaches are grown in abundance. All the standard varieties are planted. The leading one is the Red Bird Cling, but of late the J. H. Hale is very popular. The Yucaipa people also claim to have the largest cherry orchard in the south end of the state and numerous smaller orchards. The principal varieties are Black Tartarian and Royal Anne.

This wonderful valley was a vast stretch of grain fields in 1910, with but two or three ranch houses, far apart, in the whole stretch of miles. In that year the Redlands and Yucaipa Land Company placed the first 5,000 acres on the market. Since that time they have placed 7,500 acres under water at high pressure so that one may enjoy all the aqueous comforts and conveniences open to city dwellers. There are 80 miles of steel pressure pipe and 50 miles of concrete irrigation flume. The valley is made available to traffic by 80 miles of graded roads, and the ocean to ocean paved boulevard constitutes the trunk line. The climate is most delightful for the altitude ranges from 2,600 to 3,000 feet. To care for the large and increasing apple and other fruit crops there are five modern packing houses well equipped.

No account of the Yucaipa would be complete without a record of what the local woman's club has accomplished. It has been the strongest influence in the upbuilding of the schools, in civic improvement and in the maintenance of a high moral standard of citizenship. It has built, or is now completing, a clubhouse that would be a credit to a town of several thousand inhabitants. To be sure gifts have been numerous but just sufficient to prove a stimulus to the membership's best endeavor. The land company presented two lots for a site and a contribution of cash. The husband of the first president and greatest upbuilder (now deceased) presented them with $1,200 worth of lumber, and when the building is finished it will be dedicated to the memory of this noble civic worker who for the last several years of life was the club's official head. But all these gifts did not buy or drive a nail, lay a brick or mix a pound of concrete. The women have never lost heart and now their labors are meeting with a gratifying response. Each year they hold a two-day festival, the proceeds of which go to the clubhouse fund. Last year it netted them $1,200; this year they anticipate still greater returns. The building must be finished, a wing built for a dining hall, furniture and equipment purchased and the grounds improved. But the Yucaipa Woman's Club is equal to the task.

Selling Cattle on a Cost Plus Basis

By R. P. Royce

DURING the last presidential campaign a New York paper referred to one of the candidates as being "an habitually indignant man," the remark being made in view of the pronounced opposition of this particular gentleman to the general plan of running the universe.

It now appears that the matter of being "habitually indignant" is not confined to the gentleman alone, but that one of our esteemed California agricultural journals is "habitually indignant" and chronically "views with alarm" the matter of public sales of livestock in California. Indeed, this particular journal appears to have become obsessed with the idea that unless the rank and file of California breeders hearken to its oracular pronouncements and permit this self appointed Moses to lead them up out of the bull rushes of complicated selling to the sunlit plains of success, the whole business of producing registered livestock will just about go to pot.

And be it known that this feeling is of no sudden development. For several years, at least, the idea has been germinating and from time to time various emissaries of this esteemed contemporary have worked themselves into a lather over the deplorable situation we have been blindly heading for. About every so often—with each change of the moon—some new sure-fire copper-riveted, air-tight, non-sinkable plan for salvation has been offered. These various activities have only mildly interested the livestock fraternity, but as yet the fraternity at large has not been greatly impressed for the reason that no one seems to know just what the paper in question wants. The attitude of the breeders appears to be one of expectancy, i. e., they hope that sometime their self-appointed guardian will come forward with a definite and demonstrable plan that is better than the plan now in general vogue. Several times, after much preliminary heralding, it has appeared that at last, and after all, and finally, the way of the California breeder was about to be made smooth—but alack! just as they were about to reach out and fold the new plan to their heaving bosoms something always happened. The plan blew up or else scrutiny of its innards indicated that it held nothing but a revamped model of the plan already in successful operation.

As a matter of fact the majority of breeders—especially men selling or buying at public auction—have long since reached the conclusion that the motive actuating the paper most active is not any deep seated desire to aid in the upbuilding of the business so much as to bring about some sort of change where it might secure greater control of the selling organization. This idea is strengthened by the knowledge that on at least two occasions strenuous efforts were made to set up a new organization for the conduct of sales. Each time the effort was repudiated by the breeders approached.

For a time the burden of their lament was to the effect that the plan of selling livestock through a central organization and on a uniform plan was all wrong—notwithstanding that the plan had been formulated by the breeders themselves. It was argued that each breeder should undertake the details and conduct of his own sales as is the general practice in the East. Later they appear to have tentatively O. K.'d the California plan, at least they endeavored to organize a selling organization along the lines of the pioneer California company. Still later a plea was put forth for the establishment of a company to handle only beef cattle sales, arguing that specialization was the correct order. Later they were found backing a proposition to divorce the sales comapny from any particular breed. Still later they came out for a plan to have a breed association take over the sales company claiming that only through such a plan could proper promotion work be carried on. The most recent proposal is for the organization of "a cooperative sales organization for all the breeds, operated at cost and turning back to its member associations any sums above costs derived from sales" which "would in a short time furnish substantial sums for specific breed promotion work." And in a final plea they say, "Give us one big cooperative selling agency embracing all breeds, operated for the sale of pure bred livestock and turning its earnings back for promotion work; then watch us grow."

The humor of the latest proposal lies in the fact that after several years of being habitually indignant this esteemed contemporary bursts forth in a plea for something California breeders have had all along and something everyone realized save this habitually indignant paper. For be it known that the California Breeders' Sales and Pedigree Company of Sacramento, the agency which handles the majority of our registered cattle sales, is in fact a big selling organization embracing all breeds, operated for the sale of purebred livestock and which as announced last year will in the future return its earnings to the men selling livestock.

The esteemed paper goes further and demands "a sales manager hired by and the hired man of said board of directors who will attend to this job and do nothing else." Accommodation should not be difficult on that point because the sales manager of the California Breeders Sales and Pedigree Company is hired by and is the hired man of the board of directors and attends to his job, most efficiently too, and does nothing else—and thereby sets a commendable example for many folks.

The writer for the esteemed contemporary coyly admits that all the details of his new plan have not been worked out, as a matter of fact one rather gets the notion that he is vague to the point of not knowing just exactly what he is talking about. This notion is further strengthened after reading farther into his article to the point where he declares that we have all been wrong in rating a sale a success or failure according to the average price obtained. By the Holy Pink Toed Prophet of Cappy Ricks, what other sound, sensible or rational method remains? Why shouldn't a man selling livestock or anything else insist upon getting a good average price? Who sets the average, anyway? Not the seller, but the buyer. And are buyers not supposed to be endowed with brains and the knowledge of how to use them? Is it the opinion of our contemporary that California buyers are so infantile in judgment as to need a patronizing mentor to run their business?

As if the above was not enough to evoke hilarity, hear the next suggestion, "Isn't it about time for cost-plus to cut some figure in our attempt at average prices?" Isn't it!

Can any level headed livestock man conjure up a cost-plus plan? Talk about the intricacies of the income tax! It would be child's play compared with figuring the value of a well bred animal as compared to a plain sort. Fancy, for example, the auctioneer about ready to call for bids. The owner rushes forward saying, "Just a moment, Mr. Auctioneer; before starting this bull I want to say that by reference to my books I find that to date this bull has cost me $339.72 and I'll have to get cost-plus ten per cent else I'll lose money." About that time the son of the seller, who is really the expert accountant of the ranch, interrupts his dad to remind him that the figure just quoted is entirely too low and was, in fact, the cost up to and including the middle of last week, and since that time, due to the increased cost of gasoline, repairing two punctures in the family flivver, a can of oil for the separator and the fact that this durn calf was responsible for knocking three boards off the bull corral, which expenses have all been duly prorated, the present cost of the bull will stand them $341.13, and if a cent less is taken the banker will foreclose. Fine business, that. No wonder the details of this cost-plus business have not been worked out.

Seriously, though, the livestock breeders of California, in view of the fact that they know that their business is on the soundest basis of any state in the Union; that they themselves are receiving satisfactory prices; that the buyers are protected to an extent not to be found in any other section, are getting just a trifle tired of being constantly importuned to listen to suggestions as to how to run their affairs by men who offer nothing constructive, who advance no sound reasons for a change other than that they are not personally satisfied with the manner in which things are run, who urge them to accept less than their cattle are worth and charge the difference up to sweet charity, and who advocate such an astounding proposition as to sell cattle on a cost-plus basis.

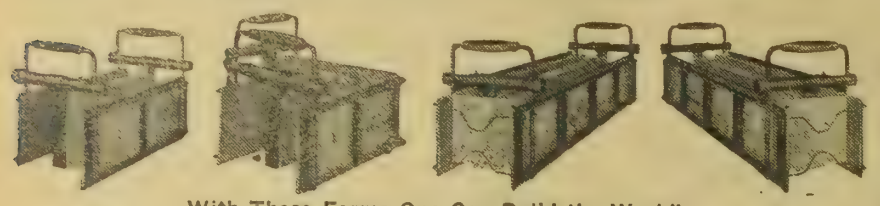
CONSTRUCTION COSTS LOWERED

Universal Concrete Molds—Fool Proof, Make Hollow Wall Construction CHEAP and EASY



With These Forms One Can Build the World's Best Buildings for the Least Money

You Can Build SILOS HOUSES BARNS WALLS TANKS CURBING EVERYTHING—and DO IT YOURSELF WITH UNIVERSAL MOLDS

What has proven a truly marvelous method of the best hollow or solid wall construction to others should interest YOU.

Everyone admits good cement construction is A-1 construction. A building—silo, wall or house—properly built of concrete adds greatly (more than the cost of construction) to the property.

The Universal Cement Molds are positively THE FOOL PROOF MARVELS OF THIS YEAR'S CEMENT OPERATIONS. With them and your two hands, some good cement, sand and gravel you can, without experience build houses, foundations, walls, silos, tanks, barns, and many other structures around the ranch. Many buy the molds—do their own work, and make BIG WAGES constructing for others.

Made of galvanized iron. EVERY FARMER SHOULD HAVE A SET. You can quickly turn spare time into valuable construction. It's easy to Build with the Universal (Fool Proof) Cement Molds. The cost is low and they last for years.

Write today for descriptive circular and booklet on cement construction.

Roeding's True Trees

When anyone is looking for a ranch home almost the first question that arises is the nature of the improvements. A place with a good ORCHARD INCOME is certain to sell first.

IMPROVE your vacant land by planting ROEDING'S TRUE TREES. Remember that the cost of a tree is not the only cost,—a good tree, like any other good article, is the cheapest in the long run.

We have a magnificent stock of properly grown, vigorous, well rooted Deciduous and Citrus Fruit Bearing Trees, Ornamentals, Vines and Roses.

Let us have your name and address and we will mail you new price list when printed.

Biological Control of Insects

CITRUS growers spend half a million dollars fighting scale pests of citrus orchards, so Orange County growers propose to make bug eat bug. A recent meeting taking steps to secure establishment of an insectary under direction of the state department of agriculture resulted in definite action and an account of the meeting is taken from the Santa Ana Register.

That 60 days at the most will see the establishment in Orange County of an entomologist at work to establish scale control in Orange County groves was the opinion expressed today by fruit growers all over the county who attended yesterday the fruit growers' conference at Fullerton.

Between 30 and 40 growers from all sections of the county were present at the conference, which was held at the Placentia packing house, with Farm Advisor H. E. Wahlberg presiding. J. H. Lang of Fullerton was appointed chairman and called for reports on aphycus control from various citrus growers who had liberated aphycus in their groves with wonderful results.

Following these reports and the discovery that those present were unanimous in their sentiment that a county insectary should be established, a committee was appointed to work out problems of establishment with full power to act on any conclusions reached.

This committee, composed of C. E. Utt, Tustin, chairman, and C. L. Crumrine, La Habra, secretary; D. Eyman Huff, Orange; Dr. I. G. McBeth, manager of the Bastanchury ranch; William Berkenstock, Placentia; Willard Smith, Villa Park; C. V. Newman, of the San Joaquin Fruit Exchange, and S. C. Hartranft, Fullerton, went into session immediately after the general meeting.

At that conference the plan suggested for financing the proposition to establish an insectary and for employing one well qualified entomologist to have full power in the county, was that each box of fruit shipped in the season should be assessed one cent, which, based on the assumption that an average citrus crop would equal that of last year, when 4,000,000 boxes of fruit were shipped, would yield the sum of $40,000 to carry on the year's operations.

Figures were given proving that $500,000 was spent last year in fumigating alone and an equal amount in overcoming the damages resulting from fumigation. These figures were a great factor in deciding the growers and shippers unanimously to approve the proposed plan. Some asserted that they would welcome an increased assessment in order to get the project launched.

The experience of the Limoneira ranch, Ventura County, was described. There the black scale has been under control for two years by means of aphycus, and the entire expense had been $7000 as opposed to $15,000 yearly for fumigating. These groves are now commercially clean. The Santa Paula Fruit association established insectaries a year later by the one cent a box assessment plan, and is finding the venture a success. If the same plan is put into effect in Orange County, it was stated the assessment plan would be presented to the independent growers and speculative buyers as well, with a view to interesting them and the growers they represent.

The committee has the names of four able men under consideration for the place as entomologist, and members are pursuing investigations of these, with a view to reporting at the next committee meeting to be called by the chairman. It is the intention to employ the best man available in the country, one whose technical knowledge and business ability have been tested, and he will have entire control of the situation in the county.

A comprehensive report of all that has been done, together with the needs of the county and the necessity for prompt action, will be submitted to the growers and the general public in the near future, after which definite steps will be taken at once, unless some unforseen difference in opinion arises among the growers' associations. That this is unlikely is the opinion of D. Eyman Huff, committeeman, who declared that Orange County fruit growers' associations and all citrus growers were a unit in favoring the proposed plan.

Walnuts Up

Prices were no sooner made by the Walnut Growers than the trade placed orders for vastly more than the whole crop. The association accepted orders for 85 per cent of the crop, then for the remainder made a 2½ cent advance. In a statement to the trade the association says:

"We alloted and sold at our opening prices 85 per cent of our estimated season's output. You may imagine our surprise when every broker on our list not only confirmed his full allotment but requested tremendous increases. In fact with an estimated crop of 310,000 bags the legitimate trade demands, as evidenced by orders submitted us at the opening, were for 782,000 bags. Naturally we couldn't confirm nearly half of the business offered. The trade's requirements were well over twice as heavy as in any previous season.

"We immediately realized that with all of our brokers having to reduce their customers' orders there would be some buyers who simply had to have additional goods in order to fill out a minimum car to certain one car markets, others to take care of opening price orders they had absolutely committed themselves to accept and which were in excess of their allotment. Therefore in order to serve the class of customers who absolutely had to have additional quantities we were forced to advance our price on our second allotment to a figure higher than we desired. Otherwise the demand would again be so excessive that we could not commence to meet it. But even at the 2½ cent advanced price the orders submitted were four times as great as we could care for. Consequently we could give our trade only 25 per cent of what they needed on the second allotment. Our second allotment absorbed all goods up to a safe estimate of our crop. If our crop overruns estimates we will have a slight additional quantity to offer later. If the crop does not overrun estimates we are through for the season."

SECOND FRUIT SHOW AT THE UNIVERSITY

On November 17-19 the Second Annual Fruit Show of the horticultural round table of the college of agriculture, University of California, will be held. The enterprise is being handled entirely by the students of the division of horticulture. No cash awards will be offered, but ribbons will be given for first, second and third places in each variety and class. The first show was very successful but it is hoped that this year a larger and more varied exhibit will be available. It is desired to have exhibits representative of all sections of the state, and more particularly to interest growers in the show. Specimens sent for the show will be much appreciated. With excellent cold storage facilities at the college most fruits shipped now can be kept in perfect show condition for exhibition in November.

Address all containers to Division of Pomology, University of California, Berkeley, California. Mark packages "Fruit for Exhibit."

In conjunction with the fruit show a short course in deciduous fruits will be conducted by the division of pomology. It will embody lectures and demonstrations upon phases which can be illustrated with the materials on display during the fruit exhibit. The program will be of interest and value to both amateur and commercial fruit growers.

AVOCADO DAY

Saturday, October 22, will be Avocado Day at the Fruit and Flower Show. The afternoon will be given up to an educational discussion of food values, use of avocado in other countries, and general avocado information. The speakers will be George H. Hecke, R. W. Hodgson and J. Eliot Coit. The program will begin at 1:30. The official nurserymen's banquet will also be given by the Avocado Association. It will be held at the Ambassador Hotel, Saturday evening at 6:30. Avocados will be served in all forms from soup to nuts. After dinner speeches will be made by representatives of horticultural associations of California, and it is hoped the representatives of state and national governments will also make talks. Plates will be $2.50 and reservations should be made through Miss McNally of Altadena.

Avocado Exhibit

Besides being the big feature on one day of the fair the avocado proposes to take a big share of attendance at the fair every day from Thursday, October 20, to the closing of the fair on October 26. If possible the members of the association will serve avocados at the association exhibit which will be in the big tent at south end of the Armory Hall in Exposition Park.

Officers of the association are: President, W. L. Hardin; vice-president, A. F. Yaggy; treasurer, J. M. Elliott; secretary, R. Agnes McNally, Altadena. Directors: Chas. D. Adams, A. Ellis Barron, E. W. Camp, W. L. Hardin, Wm. Hertrich, S. W. Jamieson, Dr. W. R. Manning, R. M. Teague, A. F. Yaggy.

AVOCADO SOILS

Nearly all standard varieties of avocado trees thrive on soils ranging from very sandy to very stiff adobe. But the time of maturity or bearing varies much. William Hertrich has planted the standard varieties on the Huntington estate on a considerable range of soils. All fruit from two to more years earlier on the heavier soils. But those on the lighter soils go on growing at a rapid pace, while their sister trees are bearing, so that after a specified lapse of years the non-producers are much larger. They have not yet been observed a sufficient time to be able to determine in which or what soils the heaviest crops are produced. If those in heavy soils also bear heaviest in future years there is no problem or puzzle. But if those on sandy soils eventually and consistently bear the heavier crops, what then?

WARRING COOPERATORS

The California Prune and Apricot Growers wired Attorney General Daugherty today protesting against any modification in the packers' consent decree which would promit the "Big Five" meat packers to handle and sell other food products, and California fruit products in particular, in addition to their meat business.

The association's wire reads: "Referring to request for modification of packers' consent decree claimed to be asked by cooperative fruit interests of California, the California Prune and Apricot Growers Association, a cooperative organization with a membership of 11,000 growers in the state of California, protests against any modification of said decree as not being in the best interests of producer, consumer or distributor."

Two carloads of onions were recently sent from San Joaquin County to Havana.

SELECTION OF AVOCADOS

There is great need of selective work being done with standard varieties of avocados. In no variety is this need greater than in the Spinks. The large size of the seeds in some fruits has been a marked objection to this variety which in other respects stands close to the head of the list. Vigorous trees of heavy bearing quality, with large, uniform small-seeded fruits should be selected through close observation, and such trees only used for buds and grafts. In this way this, or any other, variety could be very materially improved, although, because of its many excellent qualities, the Spinks will be extensively planted. In the writer's list it has always stood second, only the Fuerte being more desirable for orchard planting or home garden.

Another point of interest is the season of ripening. In Mr. Spink's large original planting at Duarte there are ripe fruit of the Spinks variety every month of the year, but not on one tree. Yet again is selection promising on another point. Some of the trees produce fruits over a much longer period than others. Some ripen their fruits months earlier than others, so that in future years we should have "Early Spinks" and "Late Spinks" as distinguished from the main crop. But the selection of trees for propagation that bear small seeded fruits is the greatest need. There are enough large trees on the home ranch at present to present a sufficient field for this most necessary work. One other point of great interest in this variety is that the first seedling from the Spinks variety is now fruiting and the fruits are as smooth skinned as any Mexican seedling. It is possible that the seed parent flower may have been fertilized with pollen from a Mexican seedling through the agency of a bee or other insect, but as the Spinks is very thin skinned the writer leans heavily to the opinion that the Spinks, like the Fuerte, is a hybrid.

STANDARDIZATION OF EMPEROR GRAPES

On Monday, October 3, the standardization bureau of the department of agriculture held a meeting at Dinuba with some of the principal shippers of Emperor grapes. A good deal of discussion has been going on ever since the opening of the shipipng season in an effort to arrive at standards for grapes packed in drums and kegs. It is agreed by all that grapes packed in sawdust for storage should represent only the very best in quality and condition and that inferior or medium class stock should be shipped in crates or lugs and disposed of promptly. The meeting was conducted by F. W. Read. It was decided to omit grading this season and instead to use the state shipping point inspection service on every car so that the quality and condition of the grapes could be accurately described on the inspection certificate and sales made on the strength of such description.

A committee was appointed to carry on further investigations as to the proper requirements for grapes to be packed in drums and kegs. This committee will meet with officials of the state department from time to time and formulate a grade which can probably be made effective next season. The personnel of the committee is as follows: Dr. G. A. Hare, Fresno; Martin Gilbert, Reedley; Dr. J. A. Moore, Dinuba; George G. Hobbs, Dinuba; Fred Moore, Dinuba; R. L. Perry, Dinuba; Clarence L. Fraser, Dinuba.

ANNUAL GRAPE REPORT READY

The annual grape report is now ready for distribution and will be mailed to the growers whose names are on the list of the viticulture service. Those not on the list can obtain a copy by addressing a request to the Viticulture Service, State Department of Agriculture, Sacramento, California.

In the main this report deals with the present status of the California grape industry. Comments on this subject and statistics relating to the 1920 grape crop, and foreign imports of grape products which come into competition with grapes and raisins of California, furnish very interesting reading for grape growers and all those who are interested in any way in grapes, whether horticulturally or commerically.

The California Bean Growers Association will meet October 29 to determine whether the association has sufficient support in the state to continue its activities. Campaign for contract signers is now being pushed.

MINUTE SOIL ORGANISMS

Farmers must depend upon the presence of minute organisms in the soil in order to get the best growth in certain legume plants.

On the roots of all plants are found small lumps or nodules which contain the small bacteria needed to take the nitrogen from the air for the life of the plants. Fortunately California soils contain a good supply of these bacteria, except possibly where new plantings are some distance from older fields or gardens.

When in doubt as to the need of artificial inoculation look for native legumes growing in the field or garden. If nodules are found on the roots of burr clover, then the soil is already inoculated for alfalfa.

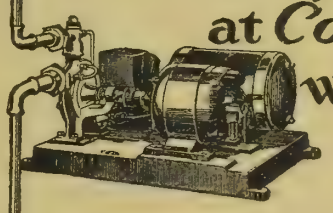
Over 88,000 pounds of squirrel poison were sold in Monterey County during the 1920-21 anti-squirrel campaign, and for sales of poison, carbon bi-sulphide, etc., the county horticultural commissioner's department collected $11,592.20.

AN APPRECIATION

Regarding the pest fighting number of the California Cultivator of September 24, H. B. Waldron, proprietor of Bonnie Doon Ranch, Hayward, writes:

"In handing you our subscription for another year we are adding an additional 25 cents for which please send us a copy or two of your last issue (Sept. 24th) which should have been printed on vellum rather than on ordinary paper. Let me ask why you do not issue this fine collection of pest control formulas on a large sheet of cardboard that can be tacked on the wall. The state department of agriculture would indeed be doing a great kindness to every orchardist if it would place an order with you for five hundred thousand for general distribution throughout the state."

Plenty of Water at *Constant* Pressure without a Tank



WATER in abundance, *direct* from well, at a turn of the faucet.

Westco

The Tankless Water System

(Automatic)

gives you every convenience of the city water system.

You don't need a storage tank because the WESTCO Pump has such capacity and pressure that it will give you all the water you want *direct* from well. Think of the saving!

And this remarkable pump has *only one moving part.* No complicated mechanism. No valves, belts or gears to get out of order. Saves you a lot of tinkering.

Thousands of these small, compact, economical WESTCO Tankless Systems are in use giving daily, dependable service.

It's way ahead of any water system we've ever seen. Come in and look it over—no obligation to buy. We're sure it will interest you.

Just Grass

By H. L. Musser

WITH the ever increasing demand in California for livestock (cattle, sheep and hogs) there is a greater need for more forage. With the rapidly decreasing range the forage question would seem a serious one. The question is not one of acreage as there is far more acreage lying idle than under cultivation; idle for some reason or other but not necessarily for lack of grass; there is grass for every condition of soil and climate.

If you have damp land there are many good palatable grasses and clovers that will grow on it. If you have alkali plant Melilotus alba, Rhodes grass, Sudan grass and Australian salt bush (Atriplex semibaccata). If you have rich level farm land with abundance of water for irrigation you need scarcely ask the question, "What shall I plant?" You may plant anything you wish for your stock and expect maximum crops. But it is the dry desert range that needs the attention of scientific investigation and cooperation among the stockmen.

We hear the expression of "run down ranges" and of "reseeding the range," etc. The natural range abounds in gramma grasses and edible brush, this in spite of the fact that all the herbaceous animals since Noah turned them loose have been destroying the good and leaving only what they did not want and what they could not destroy.

Our stockmen have turned their cattle loose on the range until there is nothing left for them to live upon except during the short season following a normal rainfall, and when there is no rainfall there is a famine. The remedy for this is (1) Cooperation among stock men or government control in order that the range may be divided into sections and pastured in alternate years. (2) Systematic reseeding. The native grasses reseed themselves if given a chance. But foreign grasses may be established if the proper method is found. Broadcasting seed has not proven satisfactory. The reason may be found in the statement that "raw land must first be broken in." Therefore, wherever possible there should be devised some method of "breaking in." Another solution may be found in the fact that many seeds grow readily in burnt off lands. Smilo is one of them and a good one for either the dry mountain or low land range. We would not suggest burning up the desert in order to sow Smilo but would it not be feasible for stockmen to contribute to sowing seed of Smilo and Melilotus alba where thousands of acres have just been burned over?

This has proven successful and will no doubt again. There are grasses that will reclaim the desert that need only a demonstration to prove it. Either the stockmen or the federal government should make this demonstration and in doing so produce enough seed to meet all demands. I can think of no federal project that would prove more remunerative to the government or more beneficial to the public.

Replacing Peach Trees

In the issue of October 8, (page 374) is inquiry from Turlock as to renewing, or rather replanting, peach trees which were dying in 14 year old orchards. The soil is possibly infected with fungus spores and other conditions are not the best for replanting a growing tree in same site. We answered as best we could then asked subscribers to come back with suggestions. They have come and here are some of their suggestions:

George S. Knight, Modesto

I had a good deal of experience along that line in the Santa Clara Valley. Pull the old trees as early in the fall as possible, digging the dirt away for two or three feet all around the trunk of the tree and deep enough to get out as many of the old roots as possible, then pile the holes full of prunings or any rubbish that will leave a good bed of ashes and let the rains leach them until planting time. If not enough brush to fill all the holes, scatter a good coat of slacked lime (air slacked will do) and let the rain do the same to it. I have had good results with all kinds of trees in that way with the exception of cherries. When planting the young tree fill in around the roots with fresh dirt from center of rows and you can put the old dirt on top. Don't put any fertilizer or manure in the hole.

William Honegger, Vacaville

After we had removed the stump and main roots of a tree we proceeded to dig up the smaller roots, following some for two to three feet. After all the roots are thoroughly removed the hole should be about four feet deep. Then we let it lie until spring. In the spring we took a scraper and filled the hole completely with top soil, then we planted our trees. The main point is to get out all the roots thoroughly and put in new soil as the old soil may be infected more or less with the diseased roots. If this is done I see no reason why the young trees should not grow in spite of the old trees. Ours grew and then some.

F. R. Weidenmueller, Anaheim

I would pull or dig out the dead or dying trees, leave holes open for aeration until ready to fill up to the very top with virgin, or nearly so, soil well firmed by trampling as may be (having previously cleaned out holes good and plenty), then get well grown, healthy trees with abundance of roots and on, preferably, the Tennessee seedling peach root, if obtainable, and soon as time comes so to do, plant them, roots well puddled and never for a moment allow to get dry up to that time, in most approved manner and properly cut back for a low head, giving young trees every chance for good start by frequent and thorough hoeings (whether under irrigation or not). I would protect them against sun, wind and vermin by whatever material is handy, be it nothing but newspaper; this would encourage buds on south, hot sides of trees to put forth that otherwise might dry up and never put out, assuring a much more symmetrical head to start with. Then, and this is the most important, the one great essential part of the program, I would sever the roots of remaining old trees about midway between rows in both directions at right angles, using a subsoil or a common 1 inch plow. Plow out a deep dead furrow and wide so as to go deep enough to cut any root that might encroach upon the moisture and plant food so essential to the young trees. Then I'd fill up again with plow and plow the whole orchard in regular fashion. I would not hesitate one moment cutting roots no matter how large, the larger the more necessary to be cut for the good of the young trees. Root, as well as top, pruning is invigorating and vital to the health and longevity of fruit trees. Anyway the sole object is to best establish young, helpless trees among a lot of old, greedy vets. The above outlined procedure will bring desired results.

H. B. Lehman, Glendale, Arizona

We have an old orchard in which trees have been dying six or eight years and we have been resetting young trees where the old ones died with no success. It made no difference whether the young tree was close to old trees or four to six rods away. We even dug large holes and got new ground from a ditch bank, ground that came out of the ditch from cleaning it. The trees would grow one or two years and then die. Two years ago one tree made a big growth, say limbs four to six feet long, then last year not one leaf came out. Apple trees the same, also umbrella trees.

(The conditions described by our Arizona correspondent are so common than in answering the question in the first place we suggested that possibly

YOU CAN BE SURE IT IS GENUINE

HAIRY PERUVIAN Alfalfa Seed

Every seed that goes into the bags stamped RED SEAL BRAND is a GENUINE HAIRY PERUVIAN ALFALFA SEED. This seed is selected and inspected for its quality — and given the identification of RED SEAL BRAND for YOUR PROTECTION.

2 and 4 Wheeled

Auto Trailer Co.
1320 Central Ave., Los Angeles

the fungous and other troubles which may have affected the roots will exist in the soil for a longer time than the few months referred to and this might prove a determining factor in the success of the newly planted trees. If possible to rotate and put in alfalfa or potatoes or some other crop for a few years we believe the orchard could be made over into another orchard probably of great value.—Ed.)

Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

Veterans Aid

Can a man who served in the regular army for 15 years and during the last war was on detached service at Monterey, be entitled to the opportunities offered to ex-service men of California? I have settled in California since August, 1920. Is such a person entitled at the present time to vote without registration in California?—Subscriber, Hynes.

The veteran acts of this state define a "veteran" as one "who received an honorable discharge from the United States military forces and was on active duty therein in time of war and who was at the time of his enlistment, induction, commission, or drafting, a bona file resident of California" As the subscriber was undoubtedly a resident of some eastern state he would not be entitled to participate under the terms of this act. In order to vote it is necessary that he be a resident of the state at least one year and in the county 90 days. No person is entitled to vote without registration, no matter how long he has resided in the state.

Clear Off Mortgage

Two parties own a house together. One, with the consent of the other, mortgages the house for money borrowed. Both sign the mortgage, the one obtaining the money giving the other an agreement to pay the mortgage. He, however, fails to pay and the other wishes to clear the mortgage and still retain his undivided half. How shall he proceed?—Subscriber, Santa Maria.

Each is, of course, liable for the total amount of the mortgage. The party desiring to clear the property should pay the mortgage and take an assignment thereof. He then stands in the position of mortgagee and is entitled to enforce the lien of the mortgage against the property or require the mortgagor to pay. If the property is sold on the mortgage foreclosure plan then he is entitled in any event to obtain contribution of the amount, if the complaint in the action is properly framed.

Line Fence

I wish to build a line fence, pay for it myself and retain absolute title. How can I always show that it is mine?—Subscriber, Vacaville.

If the fence is built upon your own property at your own cost and expense, it is unquestionably your own fence and no one would be entitled to obtain any interest therein except with your free consent. If you keep the receipts for labor and materials, it would, of course, aid materially in establishing the fact that it was your own fence, if the question ever arose. It would make no difference as to the manner of building the fence so long as it is entirely upon your own property.

Road Right

I purchased 30 acres of land which was rented to adjoining neighbors. Many years ago there was a road into this land but traces are nearly lost. These neighbors now refuse permission of ingress and egress. What should I do?—Subscriber, Windsor.

Two methods are apparent. One would involve the tracing back of the history of the old road to and from this place, and if it was a practicable road dedicated to public use you would be entitled to have it re-established. The other means is what is termed as the "right of necessity," which would involve the tracing back of the title of this land and that of the surrounding land. This rule is based on the fact that it is presumed that a grantor who sells land surrounded by his own land grants also a right-of-way to the vendee over his own land and in the same way retains such right-of-way over the land which he grants. In either event a detailed inquiry into the history of the land would be necessary for a correct answer.

Right to Redeem Lots

I own property upon which I gave mortgage and sold lots to a party who would not assume the mortgage. He failed to pay the interest, the bank foreclosed, and the lots will be sold. I intend to buy the lots at the sale. Has the party to whom I sold a right to redeem the lots within a year?—Subscriber, National City.

Parties who are entitled to redeem property are, first, the judgment debtor or his successor in interest in the whole or any part of the property; second, a creditor having a lien on the property sold, or some part thereof, subsequent to the lien under which the property was sold. As you granted this property to the buyer he is thus your successor in interest and would be entitled to redeem from the mortgage sale.

Liability of Bondsmen

A bond was given on appeal to the superior court. The case was dismissed because filed too late. Can action be taken against the bondsman?—Subscriber, Imperial.

The condition of the bond under the provisions of the statute are that the bondsmen agree that the appellant will pay the amount of the judgment appealed from and all costs if the appeal be withdrawn or dismissed or the amount of any judgment and all costs which may be recovered against the appellant in the superior court. It will be seen that as the appeal has been dismissed it comes exactly within the provisions of the statute if the bond was drawn in conformity therewith.

Loans to Soldiers

I was born in Ohio, enlisted in Utah, and was transferred to the 143rd Artillery, from which I was discharged physically unfit. Am I entitled to a loan under the California law?—Subscriber, San Joaquin.

The California acts are made for the relief of veterans who at the time of their enlistment, induction, commission, or drafting, were bona fide residents of the state of California. Unless you were a resident of California you are not entitled to relief under these California statutes. If you were a resident of Utah it would probably be that you are entitled to relief under any act which may have been passed in that state.

Blue Sky Laws

What are "Blue Sky Laws"? In what states do they exist, and are they enforced in this state?—Subscriber, Buellton.

The purpose of the blue sky law is well defined in the title of the California act wherein it states that it is an act to provide for the regulation and supervision of companies, brokers, agents, and sales of securities, as the same are defined in the act; to prevent fraud in the sale of securities, to provide for the enforcement of the act, penalties for the violation thereoff; and the creation of a department and commissioner to deal with business arising under the act. These acts have been passed in a large number of states in the Union and the act is very carefully enforced in this state.

Placing Child in School

I have taught my child according to the regular course of study at home. He is entitled by his education to enter the third grade but the teachers and principal will not permit him to go beyond the second grade, stating that I had been forcing him. He is wholly uninterested in the work which he has gone over many times, and I fear that he will dislike school. How may I require him to be placed in the

proper grade according to his education?—Subscriber, Roseville.

If you have exhausted the teacher and principal you should probably take the matter up with the county superintendent of schools. The final jurisdiction in all school matters, of course, resides with the board of trustees.

Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Grass with Oats and Barley

What grass seed would you advise sowing with oats or barley for hay? If advisable what proportions of seed should I sow?—Subscriber, Chino.

We know of no grass seed which might be sown with oats and barley for the purpose of making hay though some growers have sown vetches or other leguminous crops with the cereals. Oats or barley, especially the latter, is often used as a nurse crop for alfalfa, and the first cutting of alfalfa and grain makes a very good hay. Some think that the keeping down of weeds and protection of alfalfa from frost is sufficient compensation for the amount of moisture and nourishment taken away from the alfalfa by the nurse crop. Where planted in this way it is necessary to seed in most sections of the state during this month.

Sweet Potato Vines for Feed

Could you give me relative value of sweet potato vines for cow feed compared to alfalfa, also the best way to handle them?—Subscriber, Hynes.

We are unable to turn to any analysis or estimate of value of sweet potato vines as feed. The small or cull sweet potatoes are very valuable, especially for feeding swine which will harvest their own crop. Henry's "Feeds & Feeding" suggests that sweet potatoes may be substituted for half the corn ration. The same book says: "The vines, though difficult to gather because they trail and take root at short intervals, are often utilized for feed, usually in the green state." We would suggest the careful saving and feeding of these vines even if they do not possess as high feeding value as does alfalfa.

Possibly Mealybug

Honeydew is doing great damage to my Malaga grapes. I hope you will assist me in relieving this deadly disease. —Subscriber, Selma.

Possibly this is grape mealybug, one of the most serious pests affecting that industry. See Mr. Howard's suggestion as to handling this pest on the cover page of the California Cultivator of October 8.

Killing Eucalyptus Stumps

How can I kill eucalyptus stumps? Will arsenate of lead do it? Please tell me just how to use it. Saltpeter has been suggested by one party. I have a large number of stumps that I wish to kill out without the expense of grubbing.—Subscriber, Seeley.

Yes, arsenate sprayed over the leaves will perhaps end their existence, but why go to such great expense? A man with either an ax or mattock will kill or at least discourage the growth on these stumps much faster and cheaper than can be done with chemicals. If the stumps are attacked before the growth becomes large and woody and while the old stump is struggling to get sufficient leaves to support life, it is a serious shock to have these few leaves quickly removed. Of course they will start again, but a similar operation a few weeks later takes but a minute or two to each stump. As to saltpeter we think it would have but little value in killing the stump, but if large hole is bored down in the top of it and this filled with the saltpeter it permeates the wood and makes it combustible so that later when the stump is entirely dead a fire built alongside of it will sometimes consume to the ends of the larger roots.

Keeping Apples

I would like to know a good way of keeping apples for winter use.—Subscriber, Downey.

We have never seen it tried in California but it has often occurred to us why is not the good old Eastern way of storing apples in a covered pile in the orchard satisfactory? It would certainly keep them cool, and if covered as deeply with straw and dirt in order to keep out the warmth as they are covered in the East to keep out the cold we believe they should keep very satisfactorily. Have any Cultivator subscribers tried it? The method in the East was to place deep layer of straw on the ground, pile apples in a pyramid, cover with straw and then in turn cover the straw with the surrounding soil. We have seen them covered to the depth of two feet. The digging out of the dirt for the covering makes for perfect drainage of rains away from fruit and an even temperature is assured. Of course storing on racks in cellar is another method while the best method of all is cold storage where temperature may be kept around 35 degrees.

Net Weight of Milo

Answering a question as to net weight of milo, Geo. W. Hendry, assistant professor of agronomy at the state university, writes: "We have found that the difference in weight between milo heads as cut in the field and the threshed grain obtained therefrom depends upon several factors as follows: The length of stalk attached to the head when cut, the percentage of moisture contained in the heads when cut and weight and the completeness of filling of the kernels in the head. There is also a variation depending upon variety or strain. Some strains produce very compact heads which contain a higher percentage of grain to total weight than the heads of other strains which are more open. Under average conditions, however, assuming a six-inch stalk, we have found that the percentable of grain will vary from 75 to 85 per cent of the total weight of the head. In case of the more open brown and white Egyptian corns this would be reduced somewhat, and in the case of the very compact feterita or White "Yolo" it would be slightly higher."

Lime Lovers

Is the cantaloupe a calciphile or a calcifuge plant?—Subscriber, Turlock.

Calciphile. For more general information regarding lime loving or lime shunning plants would refer our subscriber to the California Cultivator of June 18, 1921, in which a list of lime loving plants is given. This is in an article by Dr. R. R. Snowden. In the same article may be noted a list of plants which are indifferent as to whether they have or do not have lime, and another of those which are lime avoiding plants. We have in our own garden a case of loss of a large numver of valuable gladiolus bulbs planted in soil on which a very liberal application of lime had been made. These were planted some months prior to the printing of Dr. Snowden's article which classes "glads" amongst caclifuge plants.

AGRICULTURAL LEGISLATION AT WASHINGTON

The American Farm Bureau Federation reports:

"The conference report on the billion dollar farm export credit measure was adopted by both the house and the senate and went to the White House for the president's signature. President Harding signed the Capper-Tincher bill for the regulation of grain exchanges. The packer control bill placing the packing industry and the stockyards under supervision of the secretary of agriculture had already been passed and signed. The president also recently signed the bill introduced by Senator Kenyon of Iowa increasing the interstate rate on federal farm loan bonds from 5 to 5½ per cent. This congress also has to its credit the bill introduced by Senator Curtis of Kansas increasing the work-

ing capital of the federal farm loan system by $25,000,000. It passed the emergency tariff, and the country has been operating for several weeks under the law which limits immigration to two per cent of the foreign born in this country as recorded by the census of 1910 as residing in the United States. The federal aid road bill passed the senate on August 19, carrying an appropriation of $75,000,000 for road construction, one-third of which will be immediately available. As passed it leaves the administration of the fund with the bureau of roads in the department of agriculture and does not establish a highway commission. The highway legislation is likely to be delayed until congress convenes after its vacation. The same is true of the permanent tariff and the tax bill, the bill to prohibit the manufacture of filled milk, the truth-in-fabric legislation, and the bill proposing an increase in the maximum of federal farm loans to individuals from $10,000 to $25,000."

THE BEAN HARVEST

The California Bean Growers Association reports survey of the state's bean harvest:

"Threshing is on in all sections. In the Chino, Puente and Ontario districts late beans show considerable damage from rust and nematode which will materially reduce the earlier estimates of the Blackeye crop. In the Santa Ana district the Blackeye crop is practically all harvested and reported free from blemishes of any character. Red Kidneys are also of good quality and yield.

"The earlier estimates of 150,000 sacks of Small Whites in the Lompoc-Santa Maria district will not materialize and production is now figured around 100,000 sacks of choice recleaned. The acreage in this part of the state, as elsewhere, was considerably reduced this year. Pinks and other varieties, including Large Whites, Cranberries, Mexican Reds, Bayos and Henderson Bush, are averaging up to earlier figures as to quantity. The acreage of these latter varieties was larger than usual.

"Salinas Valley reports an excellent yield and quality of all varieties, Pinks predominating.

"Reports from the Stockton Delta district state the estimated damage by frost will be from 30 to 40 per cent of the bean crop in that section. The heavy frost was rather unusual for this season of the year and the damage so great that it can not be overcome by later growth. Harvesting begins about October 15, when the actual loss will be determined. The delta west of Stockton usually produces about 500,000 sacks.

"In the Sacramento and Marysville districts harvesting conditions are said to be ideal, but the yield not as heavy as expected, about 20 to 25 per cent below estimates made earlier in the season."

He talks so much he doesn't know
What he is saying.

WINDBREAKS FOR CALIFORNIA

By Ernest Braunton

For major windbreaks, such as are planted along highways, nothing is more effective than eucalyptus and Monterey cypress. Generally the more common blue gum is used (Eucalyptus globulus), or one of the red gums (E. rostrata or E. tereticornis). Where heat is intense in summer and frosts severe in winter, as in parts of the Imperial, Coachella and Antelope valleys, no species has withstood the two extremes so well as the manna gum (E. viminalis). The eucalyptus are planted on the highway line. As there is usually more or less of a gutter here, the roots seek this area for moisture and so develop less toward the orchard. The cypress are planted inside, or on orchard side, alternating with the gum trees and at varying distances therefrom. As the eucalyptus roots have also to compete with the cypress roots, this increases the necessity for the former to invade the soil under the roadway and lessens the pull on fertility of orchard soil.

It may be found advisable to keep the cypress pruned somewhat on the orchard side. If roots interfere with crops, a subsoiler with chisel-like edge on front can be made, that will effectively cut all interfering roots. The Fontana Ranch in San Bernardino County has such a tool, and by attaching a 75-horsepower tractor it will sever all roots to a depth of three feet, covering a fifteen-mile stretch in a day. Where eucalyptus are on field lines only, the cutter is run on one side one year and on the other side the next year. Citrus trees grown within a few feet, or regular orchard planting distance away, seem to develop and fruit as well as rows farther away.

In so-called desert sections there is generally no need of heavy winter protection, and deciduous trees are used. Cottonwoods are common, but are serious soil robbers and are very dirty. A much better tree is the locust, though it also is a voracious feeder. In these regions—Imperial, Coachella and Antelope valleys, nothing is now so popular as an evergreen species of tamarisk (Tamarix articulata). Some use diciduous species of tamarisk, and the deciduous Eleagnus angustifolius is also a good low growth.

In the Antelope Valley, especially in pear growing districts, some orchardsdists are planting early apricots, peaches or crab apples along roadsides and fence lines, six or eight feet apart. These leaf out before the pears, are good wind breakers and do not unduly rob the soil. Others use a double set of regular orchard trees. Bartlett pears are set at 22 feet. Every sixth row a double row is set, the rows six feet apart and the trees alternating at regular distances. This gives a wind checker every eleven feet, and those who have tried it are much pleased with results up to present time. One orchardist of the South advocates the use of seedling avocados, being evergreen, hardy for that section of the state wherever citrus trees may be grown, and of handsome appearance. One may also reap a crop from nearly all of them and occasionally find a new variety worth propagating for commercial use.

AMERICAN FARM BUREAU FEDERATION ANNUAL MEETING

The annual meeting of the American Farm Bureau Federation will be held in Atlanta, Georgia, November 21-23. Arrangements have been made to care for an attendance of 8,000. The Georgia Farm Bureau Federation will be hosts on a motor tour of the state after the annual meeting. The usual convention rates will be made by railroads.

THE WORLD A STAGE

"Shakespeare says, 'All the world's a stage.'"

"Yes," replied Miss Cayenne. "And the cost of living indicates the presence of a great many ticket speculators."

Electric lights in the farm home cancel the pulling power of those "bright white lights" in the cities.

Household Department

A DESPERATE DEVICE IN DOMICILES

Lumber and labor are heavenward soaring;
Mortar and brick? They are visions too bright!
What is the use of eternally poring
Over a pamphlet of "plans" or a "site"?
Come, let's betake us to venturesome flight
(Not in pursuit, though, of labor and lumber);
Rise to a strike-free and lucreless height.
And there build us Air Castles fair without number!

Never a thought need we give to the matter—
The trivial matter! by slaves termed "the cost"!
Never an ear need we lend to their chatter
Of "price" and "expenses," those things old, enmossed!
Impediments like that shall be tossed
Over the battlements airy and gleaming;
Drop where they may, they'll be very well lost
From where the fair lights of our Castles are beaming!

Never these Castles our spirits shall harry
With cracks in the ceilings and windows that stick;
Never outside of their portals we'll tarry
At doors that won't open for key or for kick;
Nothing shall leak, warp or sag—not a trick
Of earth building domiciles ever shall bore us—
Make haste, my Love! Why, the plan is so slick
That everyone else will be up there before us!

—Minnie Leona Upton in the New York Times.

HALLOWE'EN SMILE BRINGER

By Annette Squire

IT was Hallowe'en and dark. But Peggy Weggy and Jerry Dumpling, sitting on their garden wall under the apple tree, were not a bit afraid. Their mother knew where they were, and Needle Naddle, Mother Goose's robin redbreast, knew—at least they thought he did. Just before he flew away from their garden that morning, he needle-naddled his head toward the garden wall and the apple tree. And since this was Hallowe'en, he surely meant for them to come out to the garden wall.

They were sure something Hallowe'eny was going to happen. They held hands and sat in silence. Over in the woods Mother Goose's owl was asking, "Who—oo?" The new moon went rising, rising, up in the sky like a floating, pale yellow pumpkin.

And then, all at once, at the top of the hill, right under the moon, something Hallowe'eny happened! Little dark shapes and big dark shapes came over the hill! They came down the hill. They turned into the lane that led by the wall and the apple tree!

And when they were almost to Peggy Weggy and Jerry Dumpling, all the little stars in the sky turned brighter, and the moon winked, and the shapes turned into Mother Goose, and her Gander, and Peter Pumpkin Eater, and the Old Woman Who Sweeps the Sky, and Nice Little Pussy Whose Fur Is So Warm! And Peggy Weggy and Jerry Dumpling were so glad that they cried out, "Oh, oh!" And then everybody stopped, even Gander and Pussy, to look under the apple tree.

"Why!" laughed Mother Goose, "it's children! I thought you were baby owls! Did you know it's Hallowe'en? We are going to play a trick on The Old Woman Who Has So Many Children She Doesn't Know What To Do."

"Yes," said The Old Woman Who Sweeps the Sky, "and on The Crooked Man Who Lives In a Crooked House, with only his crooked cat and his crooked little mouse. We are carrying apples and pumpkins to them; and when they wake in the morning they will find apples and pumpkins dumped all topsy-turvey by their kitchen doors! Won't that be a joke?"

"They will smile," said Jerry Dumpling.

"Here," said Peter Pumpkin Eater, opening the big sack that he carried, "you shall share the smiles and bring a smile to your mother. Here are two little Hallowe'en jack-o-lanterns, just the size for you to carry. There's the light in them! See them grin? Now as you go back through the garden, step high; and if a Hallowe'en owl asks you, 'Wh—oo?' sing out, 'We are taking these lanterns and ourselves to our mothers! We, too, are Hallowe'en Smile Bringers!'"

Smiling themselves, the children took the cute little lanterns. "This is why Needle Naddle wanted us to come out here," said Jerry Dumpling, "to get this fun! It is always fun to make mother smile! Hurrah! We're Hallowe'en Smile Bringers!"

Then Pussy and Gander and Mother Goose and the other Old Woman began to jig about and sing:

Dance a jig, my Pussy dear,
Hallowe'en's good fun is here;
Time to make somebody smile,
Maybe laugh a little while!
Let us play that kind of trick;
Dance ahead, old Gander, quick!

HINTS FROM HOUSEKEEPERS

Candied Figs

This is the third summer I have candied figs, and this is the recipe: 5 pounds white figs, 1 pound sugar, 1 cup water. Sprinkle two tablespoonfuls baking soda or saleratus over the figs, cover with boiling water, and let stand five minutes. Drain and rinse twice in cold water. I use only water enough to dissolve sugar; and when it boils, drop in figs. Cover and cook one hour. Uncover and let stand until next day. Boil slowly one hour uncovered. Cool again and boil one hour at a time until juice is evaporated. Dry on plates or granite pie pans. Keep in open jars or tin boxes, not airtight. I had 12 pounds to send away last Christmas. A few left were just as good in April or later.—Mrs. A. Inglett, Los Angeles.

Canning Tomatoes

I have been reading in your columns some good suggestions for canning different kinds of fruit and vegetables, but I have never found any as good for canning tomatoes as the one I am sending:

Put in bag and submerge in boiling water for a few minutes, then in cold water. This keeps them nice and firm and so makes them easy to skin. Have tin cans washed and ready tested to see that none of them leak. Pack tomatoes in cans until full; sprinkle a little salt and pepper on top of each can and leave covers off and set in oven to cook. When cooked enough take out of one can to fill up the others as they will settle down in cooking. Put lids on and seal. Try these and if they are not the best canned tomatoes you ever ate then I won't send any more recipes to the Cultivator.

Care should be taken in using tomatoes from tin cans. Contents should be emptied as soon as the lid is removed. Always look at the can and if it is black inside do not use it. Never use cans the second time.—Mrs. Geo. Brill, Selma.

Cabbage Pickle

I have been reading so many good pickle recipes in the Cultivator that I would like to add one more to the list—one for pickled cabbage:

3 gallons chopped cabbage, 2 gallons chopped onions, 1 gallon vinegar, 2 pounds brown sugar, 2 tablespoons turmeric, 1 tablespoon white mustard seed, 1 tablespoon celery seed, about 1 ten cent package mixed spices. If the vinegar is very strong use part water.

Put cabbage on stove in salt and water, let come to boil, take off and drain. Have ready vinegar, sugar and spices, pour over cabbage, put back on stove, let come to boil, take off, add onions, put in jars. When cold it is ready for use. Will keep indefinitely. This is a splendid relish for meats and boiled vegetables.—Mrs. Geo. Brill, Selma.

Letter File for Cultivator Clippings

Finding that saving Cultivators for reference took up too much room, I went through the old Cultivators and cut out those articles I thought I would be most likely to want. These clippings I filed in an ordinary letter file where they can easily be referred to.—A. M. D., Arlington.

Marking Fruit Jars

Instead of pasting labels on fruit jars, it is easier to write directly upon the glass with a wax pencil such as chemists use. These pencils write more easily if the glass is warm.

Besides the kind of fruit, I always put the date, as: "Bartlett Pears, 9-20-21." Have taken the Cultivator a good many years and am always finding it interesting and helpful.—Mrs. J. M. Davison, Arlington.

A BACK SAVER FOR WASH DAY

A piece of rubber tubing will be found a most desirable addition to the kitchen equipment, especially if you have running water. A piece three-quarters of an inch in diameter will fit over the faucet in the sink, and it will be easy enough to siphon the water into the wash boiler on the back of the stove, thus eliminating many trips and the lifting of heavy bucketfuls of water. The water can be siphoned from the boiler to tubs, or from boiler or tubs to the sink. The tube must of course first be filled with water, and a thumb placed tightly over each end of the tubing to prevent the intake of air. Many other uses will be found for it once the tubing is tried out.

OPPORTUNITY

A stranger knocked at a man's door and told him of a fortune to be made.

"H'm," said the man. "It appears that considerable effort will be involved."

"Oh, yes," said the stranger, "you will pass many sleepless nights and toilsome days."

"Oh," said the man; "and who are you?"

"I am called Opportunity."

"Yes," said the man, "you call yourself Opportunity, but you look like Hard Work to me."

And he slammed the door.

Oil Light Beats Electric or Gas

Burns 94% Air

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, V. N. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

MAKES HEAT AT HALF WHAT WOOD AND COAL COSTS. Install it yourself. Write for circular and prices on different sizes. Address Sievert Oil Burner Co., 710 North Main St., Los Angeles.

PEPPERS ARE RIPENING—TRY THESE RECIPES

Both green and red sweet peppers add zest and pungency to other dishes. It is worth while to put some up for winter use, either in pickle combinations or alone. Chutneys, chile sauces, and other relishes are better for the addition of peppers. Fresh sliced sweet peppers and canned pimentos flavor as well as garnish salads, whether vegetable, fruit, cheese or meat.

The United States department of agriculture recommends the following recipes in which peppers are used:

Stuffed Baked Peppers

1 cup minced cold ham, chopped bacon or cold chicken, 1 tablespoon chopped parsley, 1 cup toasted bread crumbs or cooked rice, 1 tablespoon chopped onion, 1-8 teaspoon pepper, 1 cup tomatoes cut in cubes. Salt to taste.

Other cold meats may be ground, seasoned, and mixed with an equal quantity of bread crumbs or cooked rice, moistened with a slightly beaten egg, cream, or tomato, and substituted for either of the fillings.

Take six whole medium sized fresh green peppers or canned whole pimentos. If fresh peppers are used, slice a round off the top, remove seeds, and save the top to replace. Soak in cold water (2 tablespoons salt to one quart water) for half an hour; rinse in clear, cold water. Drain, press in the filling, replace the top, and fasten it in place with wooden toothpicks. Put the stuffed peppers in a baking pan, pouring around them enough water to cover the bottom of the pan one-half inch. Bake in a medium hot oven for 20 to 30 minutes. When canned pimentos are used, remove from cans, discard liquor, and allow the pimentos to stand in a bowl for about 15 minutes to aerate before using, thus giving them a better flavor. Stuff as for green peppers and bake for 10 to 15 minutes.

Instead of actually stuffing the peppers some cooks like to chop them up and mix them with the stuffing in a baking dish which is then sprinkled with crumbs and browned in the oven. This dish is tasty and unusual even when the meat is omitted. Individual earthenware ramekins may be filled with the mixture in the same way.

Creole Chicken or Jambolaya

1 medium sized fowl, 2 cups tomato, 1 cup okra, 1-4 cup chopped onion, 1-2 cup rice, 1 teaspoon salt, 1 cup boiling water and 1 tablespoon fat.

Dress the fowl and cut into joints. Melt the fat, add onion and pepper. Cook for a few minutes to develop flavor. Then add salt, tomato and okra, and simmer for 10 minutes. Place layers of the chicken, vegetable mixture, and rice in cooking vessel until all is used. Pour over this 1 cup boiling water. Simmer for one-half hour and put in fireless cooker for three hours without the hot disk or two hours with it. Additional seasoning of ham or bacon, parsley and bay leaf, may be used.

Spanish Soup

4 tablespoons butter, 4 tablespoons green pepper (chopped), 4 tablespoons red pepper (chopped), 1-2 medium-sized onion (chopped), 1-4 pound cooked macaroni, 4 tablespoons flour, 6 pints stock, 1 quart tomatoes (canned or stewed), 1-2 tablespoon salt, 1-8 teaspoon pepper, 1 teaspoon vinegar and 1 bay leaf.

Cook chopped peppers and onion in the butter for 5 minutes; add flour, heated stock, and strained tomatoes; strain, season, add cooked macaroni, and just before serving add the vinegar.

The peppers and onion may be minced by putting them through a meat grinder.

TIME SAVED IN SORTING STOCKINGS

Here is a suggestion for saving time and bother with the laundry. When a pair of stockings is dropped in the laundry bag the owner fastens tops together with a safety pin. This saves time in washing, in drying, in sorting out the clean clothes. The mother of three who is also a business woman offers this help to our home makers.

WHICH WAS THE HOME OF WEALTH?

By J. M. Davison

THE car was crowded and I pressed forward and took my stand just back of the motorman. For several blocks, after the plunge through the tunnel had shut out the lights of Hill Street, we rode without stopping. A local passenger, rising to stand by the exit as the car slowed down, offered me his seat. The long ride on Sunset Bouvelard was punctuated by many stops. As we reached the open country on our way to the distant surburb, the car became almost empty and the stops less frequent. I carried the evening paper in my hand, folded. I was in no mood for reading. As I glanced at the paper earlier on my ride, a headline attracted my attention. It was "Unable to Live on $100,000 a Year." I glanced at the article which contained the statement, that inasmuch as one of his relatives had refused to advance him money in addition to the $50,000 he received every six months from his father's estate, Jack Cudahy, in his palatial Hollywood home near which I had passed, had taken his shotgun and ended his life.

As I sat there with the folded paper in my hand, I saw the motorman apply the air and I heard the brake shoes grind against the wheels. I looked around. No one had the appearance of wanting to get off. I looked ahead. We were approaching a street crossing, but I saw no one signaling for a ride. As we reached the crossing the motorman brought the car to a stop and threw open the front gate. Emerging from the semi-darkness there came running a boy, who with a spring bounded up the steps of the car. As the reflection of the lights fell upon him I saw that his feet were bare. I saw a neatly patched but clean pair of overalls that came to his knees. I saw a faded cap upon his head, and in his eyes I saw the flash that comes from health and eagerness, and vitality and—something more. Almost before his feet had touched the step there was a cheery "Hello Daddy," followed by an instant "Hello Sonny," and a package was hastily passed from son to father. For an instant after the package had passed the free hand of the father clasped the hand that had reached to him the package, but only for an instant, for no passenger fare is added to the revenues of the company by this stop, and springing from the car with a "Goodnight, Daddy," the boy was swallowed up by the darkness and the car moved on its way.

The motorman was still humming to himself softly the old words, "There's a wideness in God's mercy like the wideness of the sea," as he started to open up his evening lunch, after setting the brakes at the end of the line.

As I stepped from the car and looked down the dimly lighted street leading to my final destination it suddenly occurred to me that as I had watched the graceful swinging run of the boy into the darkness toward the low roofed bungalow with the cheerfully lighted window, my right hand resting on the empty seat at my side had involuntarily released the folded paper. A very few returning steps would enable me to recover it. I did not take them.

ONE WAY TO GET ACQUAINTED

Talking about American village life, Booth Tarkington, the novelist, once said, "I'm afraid our American villages don't practice the social amenities to any great extent. I know a short story writer who moved recently into a quaint Vermont village. I met him the other day in a magazine office and asked him how he liked his new life.

"Fair," he answered.

"Have you called on your neighbors yet?" said I.

"No," said he, "but I'm going to if I miss any more of my wood."

A BUSINESS DEAL

"Remember, I don't know anything about business. In business matters I'm a baby."

"Can't deal with you, then. A baby wants it all. Send me somebody who does know something about business."
—Louisville Courier-Journal.

Southern California Fair

WHEN the 166 boys from 18 schools making up the judging teams lined up for action at the Southern California fair at Riverside they composed the greatest showing of its kind ever seen in the State of California. Naturally all of the 166 could not be declared winners but there were some good averages made. The winners were: 1, Herman Darling, Franklin (Los Angeles), 66.6; 2, Ralph Stokes, Long Beach, 66.3; 3, Wilder McCullough, Van Nuys, 65.3; 4, Martin Colgrove, Van Nuys, 63.8; 5, Walter Penland, Owensmouth, 63.6; 6, Thelmas Biddison, Antelope Valley, 63; 7, Glenmore Imbach, Van Nuys, 62.5.

Two of this group of winners will be sent with all expenses paid to the Chicago International late in November. These two will be joined by two others chosen from among the state fair contestants. This will be the first delegation of judging teams from California to the International. The funds for bearing the expense of this trip are being solicited from livestock men of the state who believe in this type of education for California youngsters. $2,000 is needed, and it is urged that remittances be made to R. J. Werner at Esparto, R. A. Condee, Chino, or J. B. Lillard, superintendent of agricultural education, Sacramento.

This contest was under direction of J. B. Lillard, state supervisor of agricultural education, John F. Osborne, acting farm adviser of Riverside County, and R. A. Condee of the California Junior Republic. The official judges of the contest were Profs. Hughes and J. I. Thompson. Riverside County farm bureau members have all taken intense interest in this contest, in fact, all the members have been active in promoting the work of the Southern California Fair. It was a remarkably fine showing of California products.

The horticultural tent was even more than filled. There were Fresno and Kings Counties down from the great central valley; then there were the farm bureaus, Elsinore, Hemet, Moreno, Arlington, Avocado Growers, Imperial County, Nuevo, Coachella, Beaumont, Corona, Orange County, state department of agriculture, Banning Almond Growers, Jurupa, Glenavon, Perris, San Bernardino, Almond Growers Exchange, Sunsweet Prunes, Riverside Honey Producers, and myriads of other exhibits, a mere list of which would tire the reader. Southern California's greatest fruit growing industry, the citrus, however, had practically no representation. With Riverside as the center of the citrus industry it hardly seemed just that the citrus interests should be unrepresented.

One of the most striking exhibits was that of automobiles. Without knowledge of actual numbers it appeared that the exhibit at Riverside showed practically twice as many entries as were made at the state fair.

But working back toward the section given over to animal husbandry one was tempted to pass through the poultry tents and buildings. Nearly 2,000 birds were entered and exhibited. The pigeon show was not big, but in the matter of banties the enthusiastic fanciers maintained by long odds "the greatest show ever made on earth." There were 512 banties present and every one standing his straightest. Next door were the milk goats described by Mrs. Koethen on another page of this issue. Superintendent Thomas of the livestock department had a wonderfully satisfied look because of the completeness of the exhibits, especially in the dairy and swine classes.

In addition to the judging contest the various high school clubs made exhibits of swine and calves and showed some remarkably fine stuff. In these classes the awards were:

Berkshires

Boar under 6 months—1, Etiwanda Duke, Stella Mae Dillard, Etiwanda; 2, Hazen Rival, Hazen Cornelius, Ontario; 3, William's Rival, Wm. Beard, Cucamonga.

Sow over 12 months—1, Duke's Lady Lee, Hazen Cornelius.

Sow over 6 and under 12 months—1, Orchard Lassie, Geo. Beard, Cucamonga; 2, Champion's Lady Emblem, John C. Bartlett, Ontario; 3, Leader's Lady Emblem, Donald Clements, Chino.

Sow under 6 months—1, Lady Mae Harlam, Stella Mae Dillard; 2, Guasti's Queen 3rd, Hazen Cornelius; 3, Guasti's Queen 2nd, Wm. Beard.

Southwestern Berkshire Congress Special for registered Berkshire pigs farrowed after March 1, 1921; boars—1, Etiwanda Duke, Stella Mae Dillard; 2, Hazen Rival, Hazen Cornelius; 3, William's Rival, Wm. Beard.

Southwestern Berkshire Congress Special for gilts—1, Lady May Helen, Stella Mae Dillard; 2, Guasti Queen, Hazen Cornelius; 3, Guasti's Queen 2nd, Wm. Beard; 4, Russell Rummell.

Grand champion boar—Etiwanda Duke, Stella Mae Dillard.

Grand champion sow—Orchard Lassie, Geo. Beard.

Duroc-Jersey

Boar over 12 months—1, Ace of Pathfinders II, Frank C. Curtis, Chino; 2, Pathfinder Jr., Edward Klagge, Chino.

Boar under 6 months—1, Champion, Frank Curtis; 2, Chino Champion, Frank Curtis, Chino.

Calf Clubs

Best Holstein calf owned, developed and shown—1, Kenneth Berry, Chino; 2, Kenneth Berry.

Corrected livestock award lists were delayed and Cultivator will be unable to give for its readers until next week.

Women Judge Swine

One of the unique features of the Southern California Fair was the judging contest open only to women. The breeders chipped together and purchased six fine silver cups to be used as prizes. Twenty-two ladies entered and 17 competed in judging one class of each of the following breeds: Berkshires, Durocs, Polands, Hampshires. Their judgment scored on a scale of points and the first two ladies tied with 185 points each out of a possible 200. On a toss up Mrs. Buell won first, Mrs. Whittemore second, Viola B. Wilson third, Mrs. G. A. Goodell fourth, Mrs. Cecelia G. Cravens fifth, Mrs. R. N. Hall sixth. The judging was scored by Mr. Thompson, swine judge from Oklahoma.

SAXER HOLSTEINS IN DEMAND

The John Saxer Holstein dispersal sale held at the ranch near Modesto, Wednesday, October 12, attracted one of the largest crowds seen at an auction sale this fall and resulted in the very satisfactory average of $309 on the 33 head sold.

Carl Ray of Lankershim, J. F. Miller of Ripon, and M. J. & B. A. Edwards of Escalon were the leading contenders on the better things. Ray topped the sale by paying $825 for the attractive Johanna Skylark Ormsby. Edwards Bros. made a nice selection when they took four daughters of the good cow Squaw Queen De Kol 3d. J. F. Miller secured the dam along with several other good ones. Several members of the Delhi state land colony attended the sale and were successful bidders. J. F. Miller was the fortunate buyer of the young bull, King Ormsby Moorland Colantha, a son of the great young cow Moorland Colantha Rose that is making such a creditable record.

W. A. Walker of Ripon consigned six head of cows and heifers that made an average of $191.

The California Breeders' Sales and Pedigree Co. managed the sale and Cols. Rhoades and Davis were the auctioneers.

BULLS

1, Segis Johanna De Kol Pontiac, April, 1920; J. M. Hampton Jr., Live Oak, $375.
2, King Ormsby Moorland Colantha, December, 1920; J. F. Miller, Ripon, $500.

FEMALES

3, Moorland Colantha Mead, March, 1919; J. F. Miller, $550.
5, Segis Johanna De Kol of Edelweiss, November, 1914, 31.95 pounds; Carl Ray, Lankershim, $640.
7, Johanna Skylark Ormsby, March, 1918; Carl Ray, $825.
8, Stanislaus Belle Hengerveld De Kol, September, 1918; Carl Ray, $400.
9, Stanislaus Leda Skylark Ormsby, September, 1917; Carl Ray, $375.
10, Stanislaus Leda Ormsby Jewel, March, 1920; E. F. Gleason, San Juan, $280.
12, Duchess Segis Colantha, November, 1916; Carl Ray, $250.
13, Squaw Queen De Kol 3d, June, 1914, 20.66 pounds; J. F. Miller, $540.
14, Squaw De Kol Nudine, March, 1919; M. J. & B. A. Edwards, Escalon, $490.
15, Queenie Segis Pontiac, May, 1920; M. J. & B. A. Edwards, $300.
16, Queenie Pontiac Segis De Kol, May, 1920; M. J. & B. A. Edwards, $300.
10, Stanislaus Queen Pontiac, April, 1916; J. F. Miller, $575.
20, Inka Hermana Ignaro Princess, April, 1916; M. M. Clapper, Modesto, $350.
22, Fakie Onyx Hengerveld, January, 1920; R. W. Brietenbrucher, Lathrop, $310.
23, Church Hill Lady Hengerveld, October, 1912, 24.45 pounds; A. M. Widener, Delhi, $245.
24, Dottie Tuebie, January, 1913; J. F. Miller, $295.
25, Hughson Pet Hengerveld Colantha, November, 1919; J. F. Miller, $400.
26, Golden West Silver Burke, February, 1920; J. Patrich, Peters, $300.
30, Queen Alice Ormsby Witkop, January, 1921; M. Santini, Stockton, $210.
31, Mercedes De Kol Witkop, December, 1920; J. F. Miller, $300.
32, Ora Korndyke De Kol Witkop; A. M. Widener, $300.
33, Queen Pontiac Torchlight Ormsby; H. Niestrath, Lathrop, $155.
34, Segis Mercedes Colantha, October, 1920; J. Austin, Irwin, $150.
13½, heifer calf out of No. 13; M. J. & B. A. Edwards, $170.

W. A. Walker, Ripon, Consignment

38, Aafke Ignaro De Kol, January, 1916; California Swine Corp., Escalon, $290.
40, Miss Cornucopia Alcartra, May, 1919; D. C. Peters, Delhi, $230.
41, Eva Colantha Cristeria, September, 1919; A. M. Widener, $240.

CALIFORNIA CATTLEMEN'S ASSOCIATION REPORT

San Francisco, October 10.

Sales made October 7 and 8 in Modoc County are reported as follows: Steers 5½c, cows 4¼c, weighed at the ranch, with 3% shrink. Buyer to drive cattle 20 miles to railroad at own expense. Lassen County sales reported a quarter of a cent higher. There is a great shortage of feeder and stock cattle, but abundant feed. Los Angeles buyers are operating in the northern part of the state quite extensively. Cattle weighing 1100 pounds are bringing the best price.

Relative to war finance corporation money, bankers over the entire state are cooperating to the fullest extent in financing cattlemen not only from their own funds, but also in securing money from the war finance corporation. There seems to be no reason why every cattleman in California cannot now be satisfactorily financed. There appears to be no necessity for sending breding stock or young stock to market. Cattlemen in need of financial assistance are urged to consult with their local bankers at once. If additional information is desired, write to the California Cattlemen's Association, 814 Santa Fe Building, San Francisco.

Your chairman sold another car of prime cows on October 3 at Long Beach (local butcher) at 6c f. o. b. ranch, 3% shrink.

Do not ship or sell on consignment. Sell f. o. b. ranch. Sell nothing but prime cattle. Beware of the speculative buyer who does not buy directly for a packing company. His profit belongs to you.—Fred H. Bixby, chairman, A. S. Goode, C. N. Hawkins, Owen Duffy, James Barry.

55 Royally Bred Young Registered Holsteins 55

40 FEMALES — 15 BULLS

SELLING AT PUBLIC AUCTION BY

A. W. Morris & Sons Corporation, Woodland, Cal.

At State Fair Grounds, Sacramento, Cal.

Thursday, November 3, at 10 A.M.

Never before have buyers had an opportunity to secure at their own price so large a number of young cattle from this herd, sired by the best Morris herd bulls, out of dams of rich breeding and many with great records, and most of the females carrying the service of one or the other of the great present Morris herd sires.

While a considerable number of the young females in the sale have 7 and 305 day records, there are many 2 year olds that are milking and have no records, due to the fact that there has not been barn room enough on the Coil place to house these heifers as they have freshened, and buyers are certain to secure some great bargains in these heifers.

ALL OF THE FEMALES EXCEPT FOUR IN THIS SALE ARE SIRED BY SIR AAGGIE DE KOL ACME, KING MEAD OF RIVERSIDE, PRINCE GELSCHE WALKER, KING MORCO ALCARTRA, OR SEGIS PONTIAC DE KOL BURKE, EVERY ONE OF WHICH HAS SIRED A WORLD'S RECORD DAUGHTER OR IS OUT OF A DAM THAT HAS BEEN A WORLD RECORD PRODUCER.

THE DAUGHTERS OF SIR AAGGIE DE KOL ACME include some with 305 day records up to over 653 lbs. butter for first calf 2 year olds, and are out of dams with records up to over 30 lbs. butter in 7 days and up to over 1,000 lbs. in one year.

THE DAUGHTERS OF SEGIS PONTIAC DE KOL BURKE include some with records up to over 763 lbs. butter in 365 days for a senior 2 year old, some out of high record dams.

THE DAUGHTERS OF KING MORCO ALCARTRA, KING MEAD OF RIVERSIDE, AND PRINCE GELSCHE WALKER, are practically all 2 and 3 year olds, many out of dams with high 7 day and 365 day records, and a large number of them due to calve this fall and early winter.

BULLS TO WHICH FEMALES IN THIS SALE ARE BRED

All of the best females in this sale are bred to Sir Aaggie De Kol Acme, Sir Aaggie De Kol Mead, Sir Prince Aaggie Mead, or King Aaggie Mead. Calves from any one of them, out of such dams as will be found in this sale, would add value and attractiveness to the best herd in America.

REMEMBER that nineteen of the great young females in this sale are due to calve before December 10 to SIR AAGGIE DE KOL MEAD, whose calves are rated in the Morris herd as perhaps the most promising they have yet secured from any bull.

A detailed list of the great young females in this sale is needless at this time, for the fact that they are sired by the Morris herd sires noted above, mostly out of dams sired by herd sires that have been in use in the Morris herd during the past years, and that they sell mostly bred to the great young sires noted above is evidence enough of the outstanding quality of the offering.

ELEVENTH HOUR ENTRIES

Just before the catalog went to press we received three additional entries, ONE OF THEM A 16 POUND JUNIOR 2 YEAR OLD DAUGHTER OF THE

$12,000.00 BULL KING KORNDYKE PONTIAC 20TH, fresh in July, and an 18.70 lb. junior 2-year-old, and a 19.75 lb. junior 2-year-old daughter of a 30 pound bull, both heavy in calf to Sir Aaggie De Kol Mead, making 21 females in this sale due to calve to his service before December 10.

FIFTEEN YOUNG BULLS IN THE SALE

The bulls in the offering include several that should head purebred herds, and a splendid lot that will introduce the world's most productive blood into grade herds. All of them are sired by Sir Aaggie De Kol Acme, Sir Aaggie De Kol Mead, Sir Aaggie Mead De Kol, or King Aaggie Mead, and out of dams of rich breeding, some with records up to over 35 lbs. butter in 7 days; others with good yearly records.

EVERY ANIMAL POSITIVELY GUARANTEED TO BE A BREEDER; EVERY ANIMAL TUBERCULIN TESTED AND SOLD SUBJECT TO RETEST BY THE BUYER.

TERMS OF SALE: Responsible parties may arrange for credit on the basis of one-third cash, balance in three, six, and nine months, with approved notes bearing eight per cent interest, if arrangements for credit are made before sale with California Breeders Sales and Pedigree Co.

MANAGEMENT
California Breeders Sales and Pedigree Co.
C. L. Hughes, Sales Manager, Sacramento, Cal.

Sir Prince Aaggie Mead

CONSIDER THE TREMENDOUS PRODUCTION AND DEMONSTRATED ABILITY TO TRANSMIT PRODUCTION ON BOTH SIDES OF HIS PEDIGREE.

His sire, King Aaggie Mead, is a son of the 1,000 lb. foundation cow Aaggie Acme of Riverside, who produced the 1,331 lb. world's strictly official record cow, Aaggie Acme of Riverside, who in turn produced California's only 1,000 lb. junior 2 year old, Miss Aaggie Acme Burke.

His dam, Miss Valley Mead De Kol Walker, with two records above 1,000 lbs. butter in one year, and now making a yearly record that promises to exceed her previous best record of 1,113 lbs., is a daughter of the 1,011 lb. 4 year old De Kol of Valley Mead 2d, who in turn is out of the foundation cow, De Kol of Valley Mead.

HE IS BEING GIVEN HEAVY SERVICE IN BOTH OUR HERDS. KEEP ONE OF HIS SONS IN MIND FOR YOUR HERD SIRE.

OWNED JOINTLY BY
Fred Hartsook, LANKERSHIM, CALIF. and A.W. Morris & Sons Corporation, WOODLAND, CALIF.

DISPERSAL SALE

40 Registered Holsteins
20 Grade Holstein Cows and Heifers

Dr. F. H. Shanks & Sons Herd, Susanville, Cal.

Saturday, October 29
at 10 A.M.

Because two of his sons have taken responsible positions in other lines of agriculture, Dr. Shanks has decided upon a complete dispersal of his high-class dairy herd containing the animals noted above.

The herd contains a splendid lot of heavy producing cows of good breeding, and will be presented on sale day in good physical condition. An exceptional opportunity for buyers in the northeastern counties and in Nevada to buy good Holsteins near home.

EVERY REGISTERED ANIMAL POSITIVELY GUARANTEED TO BE A BREEDER; EVERY ANIMAL OVER SIX MONTHS OLD TUBERCULIN TESTED AND SOLD SUBJECT TO RETEST BY THE BUYER.

TERMS OF SALE: Responsible parties may arrange for credit on the basis of one-third cash, balance in 3, 6 and 9 months, with approved notes bearing eight per cent interest, if arrangements for credit are made before sale with the sale managers.

HOGS AND THE ADVANCING PRICE OF FISH MEAL AND TANKAGE

The increasing number of hogs owned in Southern California has been noted from time to time and the turning of the farmers again to this activity has been very gratifying to those who watch the development of diversified production in this part of the state.

It is generally conceded that to secure the most rapid development, and hence to gain the most profitable growth in market hogs, a certain amount of animal meal is indispensable. Ordinarily six to ten per cent in the ration has been found sufficient. The brood sow has also been found to respond, not only in the number of pigs but also in their rapid, even development. As a result there are few stunted pigs where the ration is properly balanced. A supply of high grade animal meal is causing some concern because high grade tankage from the east has practically been taken from the market and the fish canneries apparently intend to do but little packing this year. Comprehensive tests at the university farm have shown that high grade fish tankage is fully equal to the best meat tankage and is superior to the ordinary hog tankage offered for sale.

The reason the eastern product has been taken off the market is explained by the fact that cotton now is quoted at a price where the grower can afford to fertilize his coming crop. Anticipating then a large demand for fertilizer the producers of high grade tankage have decided to take their product off the market.

The scarcity of high grade fish scrap is shown in the rapid rise of fish meal. In a retail way the price has been advanced approximately $20 per ton the past 30 days. Since we must have a supply of animal meal to produce pork most profitably the constantly mounting prices of high grade tankage and fish meals are beginning to create concern among those who wish to see the rapid development of the hog industry in Southern California.

GOATS AT THE RIVERSIDE FAIR

By Jean A. Koethen

Large numbers of goats have been shown at some previous shows, but at no show yet held has quality been as marked. Very few grades were shown at Riverside, the pure breds and high grades (what is known as American pure bred) being in great preponderance. "You may say for us," declared the manager of the show, L. E. Blodgett of Riverside, "that as far as quality is concerned, this is the best show ever held in the southwest. There are 33 pure bred Toggenburgs, 8 pure bred Nubians, 17 pure bred Saanens and about 50 high grades of all breeds. Only four are ungraded."

Mr. Blodgett himself showed a string of 16 sleek coated Nubians of all colors, Mrs. Wm. True of La Verne brought 13. Fred Hartsook of Lankershim, well known as a breeder of fine cattle, exhibited ten pure bred goats.

Mrs. Winthrop Howland of Redlands was there with 27 pure bred and American pure bred Toggenburgs. Mrs. Howland might almost be called the mother of goat culture in Southern California, for it was the Howland family that in September, 1906, imported the first pure bred Toggenburgs. Mr. Howland's mother, in a visit to the continent in 1905, saw the possibilities of goat culture, and the following year three does and a buck were secured from an importation by a Professor Bowman of San Diego. Mr. Howland paid $60 apiece for the does and $75 for the buck. Nearly every heavy milking Toggenburg in this part of the state, Mrs. Howland believes, has some of the blood of this buck, "Prince Bismark."

Among the interesting entries were four Saanen does from Eagle Rock, twins of last year and this, whose mother holds the world's record, having produced 3023.6 pounds of milk in 225 days, an average of six to seven quarts daily. Her biggest day's record was 16.7 pounds, a little less than eight quarts. These tests are being taken under supervision of the University of California and are therefore reliable. Another Saanen doe shown by a Riverside exhibitor gave 3500 pounds of milk in ten months, but this record is apparently not official.

Red Top
GUARANTEED
Steel Fence Posts

THE RED TOP does all you can ask of a fence post. It does not burn, rot, buckle or break. Holds its place and lasts for years. And it's guaranteed.

RED TOP costs less in the fence line than wood or concrete posts, and practically eliminates repairs.

The RED TOP Anchor that holds the post in place

No wonder it's the most popular fence post in America.

To keep thoroughly posted subscribers should read every advertisement in the California Cultivator columns.

Goats were judged by L. A. Bridinger of Santa Rosa, himself a breeder of Guernsey cattle and Saanen goats. "There has been," said Mr. Bridinger, "a slight slump in the price of grade goats, because of their very rapid increase in number south of the Tehachapi, but pure breds are holding their own and will continue to hold it. You can hardly buy a pure bred doe kid under $150, and prices run from that figure to $1000. People thought at first that a goat was a goat, but it isn't. Pure breds are the thing with goats as with cattle and hogs. It is quality that counts, and when we consider how very new the goat industry is in this state we can but wonder at what has been accomplished. There has been almost as much progress in the breeding of goats in 15 years as in the breeding of dairy cattle in four times that period. Everyone is trying to breed up now, and the goat industry has proved that it is no fad, but rests on the substantial basis of supply and demand. There need be no competition between cow and goat. The goat has its own place." Mr. Bridinger was restored to health by goat's milk three years ago after an attack of typhoid and double pneumonia and believes the deplorable infant mortality in our great cities could be reduced 60 per cent by its use.

WESTERN DAIRY PRODUCTS SHOW

Dr. C. L. Roadhouse, professor of dairy industry at the university farm, writes as to the Western Dairy Products Show to be held under the auspices of the Western Dairy Instructors Association in connection with the Pacific International Livestock Exposition at Portland, Oregon, November 5-12: "This dairy products show is second in importance to the National Dairy Products Show." There are to be judging teams from the northern states and British Columbia, and in addition teams are expected to go from California. Prizes will be given for students receiving highest score in judging butter, cheese, market milk and other dairy products.

The management of the Pacific International writes of a special concession made by railways for fares at time of the holding of the International, November 5-12. A fare of a rate and a half is being made which may be secured by simply buying round trip ticket on account of the exposition and the railway makes the rate without requiring the usual one full fare one way and return at reduced rate conditional on a certain number being secured. Attendants should remember and not buy a one way ticket and ask for receipt but pay for round trip at start.

SELLING CATTLE

(Continued from Page 417.)

Furthermore, breeders are not impressed to have such men who perforce have been sitting on the sidelines of the livestock business in this state, offer as supporting evidence articles from an Eastern magazine that made itself the laughing stock of the livestock world by a flamboyant expose of certain sale practices after the Eastern boom had fallen flat—practices that never have and never will be permitted in California as long as our present sound and efficient system of selling is kept in operation.

For one the California Cultivator resents the imputation that California breeders are incapable of attending to their own businessess or the veiled insinuation that our California sales are not conducted on a high level of fairness and honesty.

The board of directors of the San Joaquin County Fair Association has decided that its 1922 fair shall be staged the week preceding the state fair. This is a departure from former exhibitions and the change is made with the idea of securing stock which may be destined for the state fair the following week. They have arranged dates so there is a two day interval between the closing of the San Joaquin County fair and the opening of the state.

Veterinary

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Blvd., Los Angeles, are without charge. For immediate mail answer remit $1.00. In writing questions give full symptoms or particulars of injury of animal.

Pus Cavity

Please advise through the Cultivator what to do with a young heifer that has a running sore on the side of the head where the horn starts. She is about five months old. When she was very small her owner put something on her head to kill the horns. He says he put on too much and the result is a running sore where the horn would have been. Sometimes there is a swelling just below the ear that goes down when the sore runs out. I am afraid it will eventually kill her and would like to know if you can suggest something that will heal it.—Subscriber, Willows.

There is a pocket inside where the pus gathers and as the opening is at the top it can not drain out completely so it gathers again. The next time that it gathers below the ear open it there and let the pus run out below. Syringe out the cavity with a warm solution of permanganate of potash, using half a teaspoon of the permanganate to the quart of water. If you make the opening large so it can heal right inside before the skin closes that will be the end of your trouble.

Fistula

I have a nine year old mare that started a fistula about two weeks ago. She had two large swellings on her withers so I opened them and drained the pus. What can I do to cure it?—Subscriber, Tulare.

Get your druggist to put up this liniment: One dram corrosive sublimate, one ounce alcohol and enough turpentine to make one pint. Mix and apply as directed. Make the openings so the pus will all drain out if you can. Wash out the cavities with warm water and wipe out all of the water that you can. Make a swab and dip in the liniment and swab out the cavities, touching all parts. Repeat this once a week. Once a day wet the swellings around the openings with the liniment. If you are careful and do not let the openings in the skin close before the inner parts are healed properly that will be the end of it. Do not put a collar on until the parts are good and solid after healing.

Skin Disease

I have a mule that has a breaking out on his body. It seems to itch, for he rubs himself a great deal. What can I do for it? I have washed it with lysol, which gives some relief but does not last long.—Subscriber, Puente.

Probably there are some small mites in the skin. At this time of the year the hair is thick and it is hard to reach the mites unless you first clip the mule. Zenoleum is one of the best remedies for lice. Dissolve a teacup of the zenoleum in two gallons of warm water and after thoroughly grooming him with a stiff brush apply the solution and wet the skin all over, being sure to wet it well under the mane and around the tail. Better repeat the treatment in about a week to get those that may hatch after the first treatment. If this does not bring the desired results get a pint of Fowler's solution of arsenic and give a tablespoon on the feed once a day while it lasts.

Bloody Milk

We have a Jersey cow milking stringy and bloody milk from one teat. She would milk that way for a milking or two and then it would be all right for a few days but lately she has kept it up for several days. What would you advise doing for it?—Subscriber, Ripon.

The trouble may have been caused by a bruise or from too rich feed. Mix three pounds of Epsom salts with two pounds of common salt and give a handful in her feed once a day while it lasts. That will thin the blood and the parts will heal better. Outward applications do little or no good in such cases. When milking her rub that quarter with the hands and be sure to milk it out clean.

HOLSTEI-FRIESIAN SPECIAL

A special meeting of the members of the Holstein-Friesian Association of America is called at St. Paul, Minnesota, for the purpose of acting upon amendments proposed to the constitution and by-laws, also to provide for the changes and manner of government of the association or any other business which may come before the association. Frank O. Lowden, Illinois, is president of the association and, as has been the case for many years, F. L. Houghton, Brattleboro, Vermont, is the secretary. Frank L. Morris of Woodland is the Pacific Coast representative on the board of directors.

First Prize Breeder's Young Herd, 1921 California State Fair

NEVADA HEREFORD RANCH

Owned by J. H. Cazier & Sons Co., Wells, Nev.

WILL SELL AT PUBLIC AUCTION

80 Real Foundation Herefords 80

State Fair Grounds, Sacramento, Cal.

Tuesday, November 1, at 10 A.M.

The present expansion of the Hereford breeding business in California is an outstanding feature of the agricultural development of the state.

This expansion is taking place in the most substantial manner in the hands of a particularly progressive group of men whose breeding herds are being established with cattle of the better sorts to meet the tremendous demand already present for breeding Herefords of superior quality.

California buyers of the better class of Herefords may well consider it to their distinct advantage to have near at hand a herd of such widely acknowledged excellence as that of J. H. Cazier & Sons Co., Wells, Nev., that is able at this time to offer from their herd a large group of young females and a limited number of young bulls of herd heading caliber.

For general excellence, including breeding, breed, type, good health, and the high ideals of its owners, this herd has won a place among the foremost collections of the breed in America, and those wanting to buy real foundation Herefords, or to strengthen an already established herd may buy in this sale with utmost confidence.

This Is a Federal Accredited Herd

Attention is invited to the important fact that the cattle in this sale are of practically the same excellent combination of breeding as the Cazier show herd that has been so successful in our best shows during the past few years, and which has won consistently over winners in some of the best middle west shows.

LIBERAL TERMS OF SALE: Responsible parties may secure credit in this sale on the basis of one-half cash, balance in six months with approved note bearing eight per cent interest, if arrangements are made before sale with CALIFORNIA BREEDERS SALES & PEDIGREE CO.

VENTURA FAIR

By Jack Klein

Ventura County, headed by its bunch of live wire supervisors (who, by the way, are all fair directors) and by its fair secretary, L. P. Hathaway, were right in line with all of the other county fairs this year in putting on the biggest and best show they ever had Ventura County fair has the distinction of being very liberally supported by the county supervisors and the county in general with practically unlimited funds. The supervisors were all fair enthusiasts and anything within reason which is asked of them they attempt to do. The fair has grown wonderfully within the past two years and now ranks with any county fair in the state.

The livestock show this year was of exceptional merit with nearly 100 head on the ground. The great Santa Monica Dairy Company bull, King Segis Pontiac Jannek, was senior champion, and the Maxwell senior yearling, Sir Ormsby Skylark Hengerveld, was junior champion. The Maxwell Farms was the largest winner of the blues, being defeated in only two classes in which it had entries. Joy Hengerveld Clothilde, a great aged cow shown by Maxwell, was senior and grand champion, and the wonderful junior calf shown by Hartsook was again junior champion. In the Jerseys Jim Thorp of Lockeford won all honors. In the Guernseys A. B. Humphrey of Escalon won most of the honors excepting grand champion cow which went to Tucker of Ventura. The Ayrshire show brought together the herds of the Elkhorn Ranch, Watsonville, and A. A. McMinn of Phoenix, Arizona. Elkhorn won grand champion cow and McMinn won the rest of the champions.

In the hog show the Poland Chinas were represented by Fred Gatewood of Fresno whose boar, Navy Boy, was again grand champion, and by Buckland and McNeil who took all the rest of the blue ribbons. The Duroc-Jerseys brought together the herds of the Sierra Vista Ranch of Perris, James Thorp of Lockeford and J. C. Craig of Owensmouth. Royal I Am, the Sierra Vista boar, was again grand champion and Jim Thorp won grand champion sow. The Hampshire show was a good one as Ventura County is one of the Hampshire centers of the state. Lonnie Buell of Carpinteria took most of the honors but Carl Meiner of Ojai won grand champion boar. The Berkshires again brought together the herds of the Italian Vineyard Company and A. B. Humphrey. These two herds have shown against each other at practically all of the fairs this year, and the placing in this show was the same as usual, Humphrey taking grand champion boar and the Italian Vineyard Company taking grand champion sow with the undefeated Violet's Festine.

L. W. Wing of Elkhorn Ranch judged the Holsteins while G. E. Gordon of the Los Angeles County farm bureau judged the rest. Prof. E. M. Hughes of Davis was the hog man.

Ventura County turned out in force to attend the fair and the visitors from around Santa Barbara and Los Angeles kept the grounds crowded throughout the week. The fair grounds are ideally located along the sea shore, and with the treatment accorded the breeders by the fair committee everyone came away highly satisfied.

32 Roselawn Shorthorns

At Public Auction

Roselawn Stock Farm

Owned by H. M. ELBERG

Woodland, California

Wednesday, November 16

At 1 P.M.

Village Beauty E

ROSELAWN SHORTHORNS, one of the longest established herds in the west, have for many years been held in the highest esteem by buyers of dependable Shorthorns.

Directed by constructive breeding practice, and by progressive business methods, the herd has consistently merited its high place among the units of the breed in the west.

Since its last public sale in 1919 the herd has multiplied upon itself and has been strengthened by the addition of choice individuals of fashionable pedigree, until the owner is again in position to offer at public sale a class of Shorthorns that will fully maintain the high standard of the herd.

The offering contains both Scotch and Scotch topped cattle, including cows with calves at foot, bred and open heifers, and a limited number of good young bulls.

Guaranteed Breeders—Tuberculin Tested

Livestock News Notes

LIVESTOCK SALE CALENDAR

Holsteins

November 3, A. W. Morris & Sons, Inc., Woodland.

November 9, Palo Alto Stock Farm, Palo Alto.

Herefords

October 27, Pacific Coast Hereford Breeders' Association, California National Livestock Show, San Francisco.

November 1, J. H. Cazier and Sons, Sacramento.

Shorthorns

October 28, California Shorthorn Breeders' Association, California National Livestock Show, San Francisco.

California friends of the Nevada Hereford Ranch, Wells, Nevada, will be interested to learn that at the recent Utah state fair cattle from this herd made almost a clean sweep in the classes in which they were entered. Beside winning the two-junior and grand championships they topped the following classes: Junior yearling bull, senior bull calf, junior yearling heifer, senior heifer calf, young herd, calf herd, get of sire and produce of dam. The senior bull calf, Blanchard 4th, was grand champion and the junior yearling heifer, Standard Eyes 4th, was grand champion female. Many of these winners will appear at San Francisco and later in the Cazier sale to be held at Sacramento.

The animal husbandry division of the university farm at Davis is preparing to send a judging team made up of students specializing in animal husbandry, to the Pacific International Livestock Show to be held at Portland, November 5-12. This will be the first team to represent the California institution at the above show.

At the recent Oregon state fair a junior yearling Shorthorn heifer, sired by the noted California bull, Imp. Caledonia, was junior champion. This heifer was purchased in the Caledonia sale in May, 1920.

Adirondiac Wietske Dairy Maid, the great producer owned by the Bridgeford Holstein Company, Patterson, is again on yearly test and at the end of five months has rolled up a production of 808.8 pounds of butter from 16,870 pounds of milk. Her last record was 1296.43 pounds of butter from 31,899.8 pounds of milk in 365 days.

George M. Rommel, chief of the animal husbandry division of the bureau of animal industry of the United States department of agriculture, who has been with the department for 20 years, has resigned to become editor-in-chief of the American International Publishers. He will be at his office in New York November 1.

Tritoma Pietertje Mercedes, the grand champion Holstein bull at the National and the Waterloo Dairy Congress this year, was formerly owned by D. G. Maxwell of Hollywood and a large number of his calves are in the Maxwell herd. Four of his progeny won get of sire at Riverside in the strongest class shown this year. His get are all of exceptionally uniform type and are good ones.

The junior three year old Holstein cow, Miss Riverside Walker Wase, owned by the Santa Anita Rancho, has recently completed a seven day record of 27.79 pounds butter from 545.4 pounds milk. This record follows one of 19.78 pounds butter from 494 pounds milk as a senior two year old. At present Herdsman Wall says she is milking over 90 pounds per day and will be carried on yearly work. She is a daughter of Prince Riverside Walker.

W. G. Maxfield, King County Cow Testing Association, reports a new use for cow testing association records. He says that two men, partners in a dairy, dissolved partnership and used the association records to divide the herd according to production and age. Seventy head of cows were thus divided in 1½ hours, to the satisfaction of both parties.

The many sales reported of breeding stock indicate increasing interest in swine. John Kincaid of Bakersfield has just sold to C. G. Bartlett of Wasco a Pathfinder boar and four Orion gilts; to L. R. McKibbie 1 gilt; to M. S. Dukes of Wasco four Orion gilts.

WEATHER BUREAU ASSISTS STOCKMEN

The stock growers of the great range states of the West are vitally interested in cold waves, heavy snows, high winds, and the storms known as blizzards. The weather bureau of the United States department of agriculthre issues warnings of these unfavorable conditions which are dangers to farm animals. These warnings are widely distributed by telegraph and telephone to large centers. but the further dissemination must devolve on the people interested. The problem has been largely solved in some states, particularly Missouri, by telegraphing the warning to one central point in each county, where arrangements are made to telephone information of the warnings to each community interested.

When a warning is received the farmers and stockmen on the great western ranges arrange to graze their stock near shelter, or in such a direction from shelter that the stock will drift toward it when the anticipated severe weather comes. A modification of this service consists of sheep shearing and lambing forecasts and warnings. In early shearing and lambing districts shearing is delayed or newly shorn sheep, ewes, and young lambs are kept near suitable shelter, such as coulees, where they will receive protection when wind, snow, or cold rains are expected.

Classified Liners

The direct selling method from producer to consumer, and a clearing house for over 40,000 subscribers. Weekly Liner rates: Single insertion 4½ cents per word; 45c per issue minimum charge. Cash with Order.

Mail all classified copy to Los Angeles Office.

POULTRY

Continued requests are being received by the California Cultivator for varieties of poultry not advertised in our columns. If any of you, our readers and friends, have any you wish to dispose of, send a small advertisement to this office and you will be doing our readers a service as well as yourselves.

Day Old Pullets—Here is your chance to get day old White Leghorn and Ancona chicks, guaranteed at least 90 per cent pullets. We are taking orders fast for October and November delivery. Poultry and Pets at the Riverside Show

By Jean A. Koethen

MORE than usually appropriate was the grouping together of chickens, turkeys, rabbits, cavies, pigeons and other winged and furred creatures in the big triple tent at the Riverside fair. Sometimes one wonders just why turkeys and cavies should be classed together, but this time the reason was plain. Bantams were the connecting link, and bantams are both poultry and pets.

A Remarkable Class

Had there been only a few dozen bantams it would have been less noticeable, but there were hundreds. They eclipsed and outclassed all the rest of the show. To put it in cold figures there were 1700 entries all told, and 525, or nearly a third, were bantams. Chickens outside of bantams numbered about 600, and the other third of the show was made up of turkeys, geese, ducks, guineas, rabbits, cavies and pigeons.

The bantams were so beautiful too and of so many breeds and colors and varieties that one wondered whether all the world had suddenly turned to the culture of bantams. There were the old standbys, Black Breasted Red Game and Red Pyle Game, the Sebrights, Golden and Silver with their lovely spangles, the Cochins, Black, White, Buff, Red and Partridge, who filled a whole alley, with Buff, as always, leading in numbers, the Rolish, White Bearded and Buff, and those queer creatures, the Silkies. Then there were rarer varieties, the Silver and Golden Duckwing, with their modest plumage, the dainty White Game and glossy Black Game, and the Brown Red Game. There was the Birchen, a new name, in sober black and gray, the Old English Game, a striking combination of brown and black, the Black and White Rose Combs, the Wheaton, and the White Booted and the Raven. More interesting even than the strictly fancy bantams were what might be called the bantamized larger breeds. Included among these were the Light and Dark Brahma bantams, which together filled a long alley. They are among the most beautiful of bantam breeds, particularly the Dark Brahma, which are newer here than the Light and of a grayish partridge coloring which is most attractive. There were Barred and Partridge Rock bantams, White Leghorn bantams and Black Minorca bantams, the cunning Black Tailed Japanese, the Black and the White Japanese, the Malay and the Mille Fleur. No wonder the passersby lingered long in the bantam tent, loath to tear themselves away from such a fascinating display.

Chickens and Turkeys

The regular classes of chickens were well filled and of excellent quality, without the great preponderance of one breed which is sometimes seen. Rhode Island Reds, Single and Rose Comb, were the large class—they always are—and very fine specimens were seen, one $500 cockerel attracted a great deal of attention. Barred Rocks were a larger class than has been seen at recent shows, and competition was keen. First pullet was a bird of that soft, sheeny purple-green which is so hard to breed and the despair of amateurs. White Wyandottes filled a shorter alley than they did at shows of two years ago, and were balanced by Dark Cornish, which were one of the best classes. There were a few choice Silver Wyandottes.

Light Brahmas have a firm hold on public esteem, but Dark Brahmas have been little shown on the coast, and the string of 18 birds was an interesting surprise. An exhibition pen of quite young birds attracted considerable attention, the beautiful pepper and salt coloring being marked in even half grown pullets, while the gray and black and green of the cockerel marked him as a genuine fancier's delight.

Sicilian Buttercups are steadily working their way into favor, and the 25 birds shown at this show made a worth while exhibit.

A real new breed, shown here for the first time, I believe, is the Jersey Giant. These birds are black with the greenish sheen so marked in the Black Orpington, but much lighter in weight. Just what their virtues are I do not know, nor their pedigree, but they are certainly "different."

Anconas were an interesting alley, as they rarely fail to be, but the class was not large, only 20 birds being shown. Buff Orpingtons have rather dropped out of sight, and their friends were glad to see 20 fine birds, though they were all from the yards of one breeder. The Orpington is too good a bird to be discarded. There were a few Speckled Sussex, half a dozen Black Langshans and as many Golden Campines, a small but choice display of R. I. Whites, another of White Leghorns, and a string of Blue Andalusians. There was also a "One Wing Hen" in a cage by herself, but whether the lack of the second wing was congenital or accidental could not be determined by the casual observer.

Splendid Turkeys

Not for several years has the showing of turkeys been so large as in this show. Mammoth Bronze led in number, but White Hollands and Bourbon Reds were out in most creditable strings. The beauty and size of the Bronze have long since won it a place both as fancier's and as market bird, which can be filled by no other, but the White and the Red have the advantage of smaller size which makes them more fitted for a certain kind of demand. Hotels, restaurants and clubs, it is said, prefer the big birds, but many families like a bird of not over ten pounds, and this demand the White Holland and Bourbon Red fill admirably, though full grown toms reach 20 or 25 pounds.

There were a few Indian Runner and Pekin ducks, the Fawn and White Runners being noticeable for their fine color, a Muscovy or so, a pair of African Guineas, and six very handsome Toulouse geese.

Few But Interesting

The pigeon exhibit was small, but contained some interesting entries, chief among them the beautiful Swiss Mondaines, both Blue and White. The dainty grayish blue and the soft, delicate white of these lovely little birds were first to catch the eye among the yellows and reds and mixed colors of Pigeon Alley. They were not the only beauties, however. There were Miss Carneau and Lady Tumbler and Duchess White, to say nothing of all the Fantails and Runts and Kings and Homers, and a few Russian Trumpeters and the whole Tumbler family, Black and White and Yellow and Blue Muffs. Doubtless there would have been many more if this had been an exclusively pigeon show, but pigeons do not like to take second place and in a mixed show this is inevitable.

Rabbits and Cavies

Nearly 200 rabbits and about 150 cavies were entered. A large part of the rabbit coops bore the card of the Ontario and Upland Rabbit Association which had 57 exhibits and 12 exhibitors. The biggest rabbit in the show was a Flemish doe 8 months old weighing 20 pounds. Among the breeds entered were Gray Flemish, Flemish Giant, Steel Gray, Mottled Gray, Sandy Gray, Black Flemish, American Blue, American Checkered Giant, New Zealand White and Blue, Himalayan, Havana, White Angora, White Flemish, New Zealand Red, and American Blue.

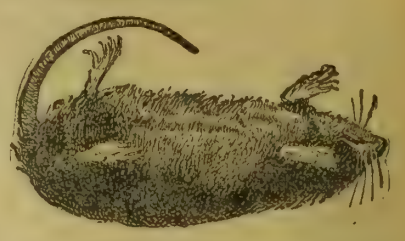
The cavies were about all the colors that a cavy can be, cream, white, mottled, black and gray, and classified as English Black, Cream, Broken Color, White, Red, Golden Agouti, Tortoise and white and Angora, and Silver Agouti, and Broken Abyssinian in buff, white and black. Culture of the cavy, we are told, is increasing steadily in Southern California, and a ready market is found in the laboratories of the County Hospital and other institutions, as well as in private laboratories and at the Presidio in San Francisco.

The executive committee of the Central California Wool Growers Association met at Stockton last week to talk over wages for herders and rates for renting of pasture.

WIPE OUT EVERY RAT AND GOPHER

Amazing New Discovery Quickly Gets Every One. Not a Poison

Don't be satisfied with trapping or poisoning just a few. Exterminate the whole bunch—old, young, big and little. Rats do millions of dollars' damage each year. They kill chickens, destroy grain, damage buildings, merchandise, and are filthy disease carriers.



A wonderful new scientific discovery called Imperial Virus now enables you to clear your place of every rat on it. The amazing feature of it is that it is not a poison and affected rodents such as Rats, Mice, Gophers, Prairie Dogs, Ground Squirrels, etc., only. It is perfectly harmless to humans, stock, poultry, pets. It can, therefore, be spread anywhere knowing it will kill only the pests you want to get. One rat affects the others and in a short time the whole colony is exterminated, root and branch. They die outside, too, hunting air and water.

YOU CAN TRY IT FREE

The manufacturers of this amazing Virus, to get is quickly established and widely used, are making a Special Guaranteed Introductory Offer of two regular, big, full sized (double strength) $1.00 bottles, for the price of one. Use one yourself and sell the other to a neighbor, thus getting yours free. They will also tell you how you can make money telling your friends about it. As this offer may not appear again, you should act at once or clip for future reference.

You need send no money; just your name and address to the Imperial Laboratories, Room 215, 2110 Grand Avenue, Kansas City, Mo., and pay the postman $1.00 and a few cents postage, when the two bottles arrive. It costs you nothing if it does not do the work, as they positively guarantee to refund your $1.00 any time after 30 days if you are not satisfied.

Easy Now to Get Rid of Lice and Mites

Startling New Discovery Eliminates These Pests Without Dusting, Spraying or Dipping

Any poultry raiser can easily and quickly clean out Lice and Mites by using a new Remedy recently discovered by a Kansas City Chemist and called Imperial Lice & Mite Remedy.

All that is necessary is to occasionally put a few drops of this amazing remedy in the fowl's drinking water. It renders them immune from the attack of all blood-sucking parasites, as these pests positively will not stay on a fowl taking this remedy.

It also acts as a splendid Tonic and Blood Purifier, as well as increasing egg production and growth, for with these pests eliminated, hens lay better and young stock grows faster. It is positively guaranteed not to affect the meat or eggs.

The manufacturers of this wonderful remedy are anxious to get it quickly introduced among poultry raisers everywhere, and make this Special Introductory Offer: Send no money, just your name and address to the Imperial Laboratories, Room 522, 2110 Grand Ave., Kansas City, Mo., and they will send you a regular full sized $1.00 bottle and will also send you free a big, full sized (double strength) $1.00 package of Imperial Egg Tonic, the guaranteed egg producer. Pay the postman only $1.00 and a few cents postage when both packages are delivered. If, after 30 days' trial you are not satisfied with results just say so and your money will be cheerfully refunded.

Poultry Queries

(Conducted by Jean A. Koethen.)

Cement Laying House

I wish to build a laying house for 200 hens, and can build more economically with cement. Will it be all right to build back and ends and floor of cement, leaving south side entirely open?—Subscriber, Redlands.

As far as I know, cement houses have not been tried in Southern California, but I do not see why they should not be satisfactory in your dry climate if properly ventilated. You will have to provide for more circulation of air than is required in a wooden house in order to overcome the dampness which gathers so readily in a cement building. Many wooden houses are built with not only the front open but with windows almost or quite the length of the dropping boards between the droppingsboards and the floor. In a cement house it would be well to have the entire space between droppings boards and floor filled with glass or with wire covered with a wooden shutter so that it may be all open when the weather permits. There should also be windows in the ends and the floor should be covered first with a thick layer of dry sand and on top of the sand a layer of straw.

A kicking horse cannot pull and a pulling horse cannot kick. Don't be a kicker. Pull.

Help your Moulters Moult

Moulting time is the time that a hen needs assistance. It is the off-season in the life of the hen.

Think of the amount of a hen's energy, vitality and red blood that's required to reproduce a thousand feathers! (which is only an average plumage).

A moulting hen needs good health, good appetite and digestion. That's just what Poultry Pan-a-ce-a does for a moulting hen—gives her appetite and good digestion, so that she'll eat more and digest more.

Dr. Hess Poultry PAN-A-CE-A

Helps your poultry through the moult. And starts your pullets and moulted hens to laying.

It contains Tonics that produce appetite and good digestion—Tonics that tone up the dormant egg organs—Iron that gives a moulting hen rich, red blood and a red comb. It contains Internal Antiseptics that destroy disease germs that may be lurking in the system.

No disease where Pan-a-ce-a is fed

Pan-a-ce-a helps your poultry to stay at par during the moult. They don't become run-down, pale and thin. That's why a Pan-a-ce-a hen gets back on the egg job quickly instead of sitting around all fall and winter as a bill of expense while regaining her normal vitality.

Always buy Pan-a-ce-a according to the size of your flock. Tell your dealer how many fowls you have. He has a package to suit. Good results guaranteed.

30c, 60c, and $1.25 packages. 25 lb. pail, $3.50. 100 lb. drum, $12.00. Except in Canada.

STORRS EGG LAYING CONTEST

Storrs, Connecticut, September 26, 1921.—Report for week ending September 26. With five weeks to go the hens in the egg race at Storrs have now laid more than 150,000 eggs. They may not smash all previous records but it is reasonably certain that they will beat the average for the last six years. The pen of Leghorns from Hollywood, Washington, that has been in the second place for several months gained another six eggs on the leaders last week which means that they are only 46 eggs from first place. Both the Leghorns and the Wyandottes that are leading them have laid over 2,000 eggs each or an average of 200 eggs per hen.

The weekly scores were close. Three pens of Leghorns owned by Andrew L. Ohr, Wallingford, Connecticut, A. P. Robinson, Calverton, New York, and Hollywood Farm, Hollywood, Washington, tied for first place with 42 eggs each. The total lay for all pens was 2,467 eggs, or a little over 35 per cent.

The four leading pens in each of the principal varieties are as follows:

Plymouth Rocks

W. H. B. Kent, (Barred), 1902; Rock Rose Farm, (Barred), 1625; Jules F. Francais, (Barred), 1603; James F. Macdonald, (White), 1456.

Rhode Island Reds

Charles H. Lane, 1856; The Orchards 1742; Sunnyfield Farm, 1703; Henry P. Walker, 1666.

White Leghorns

Hollywood Farm, 2042; L. E. Ingoldsby, 1973; Burchell & Janson, 1895; Ernest H. Scott, 1888.

Other Varieties

Obed G. Knight, (White Wyandottes), 2093; H. P. Cloyes, (Buff Wyandottes, 1616; A. E. Hampton (Black Leghorns), 1486; Clemens J. Diemand (White Wyandottes), 1409.

CROP CONDITIONS OCTOBER 1

California Cooperative Crop Reporting Service:

The composite condition of all crops in California on October 1 or at time of harvest was about 4.8 per cent below their ten year average condition on that date, compared to 7.7 per cent below average on October 1, 1920.

The condition of the various crops or of total production or average yield per acre on October 1, expressed in percentage of their ten year average (not the normal) on October 1, was:

Oranges	112.8
Lemons	103.6
Grain sorghum	103.4
xPrunes	98.6
Sweet potatoes	97.9
Potatoes	95.2
*Barley	94.6
Sugar beets	93.2
Corn	92.1
*Oats	90.1
Rice	88.3
xPeaches	88.0
Apples	87.2
Pears	84.3
Olives	84.0
Almonds	83.3
*Hops	82.5
Walnuts	82.4
Beans	81.9
Cotton	79.2
Grapes	73.3
Average of all October 1, 1921	92.4
Average of all October 1, 1920	92.3

xProduction.
*Average yield.

The National Tuberculosis Association announces its Christmas seal sale for 1921 as already well under way. The management writes: "The fight against tuberculosis is clearly moving toward victory. The death rate from this disease has fallen to the remarkably low level of approximately 120 per 100,000 population. This represents a saving of over 75,000 lives a year as compared with the death rate of 15 years ago, when we started the fight.

TOO WELL

Blackstone—Why did you fire that young bookkeeper, couldn't he balance his accounts?

Webster—Yes; but he started to juggle them!—New York Sun.

THE SHARPLES MOTO-MILKER

FOR ALL SIZED DAIRIES

Economical and Efficient, It Takes the Drudgery Out of Dairy Work

The Sharples Moto-Milker for Small and Large Dairies.

THE SHARPLES MOTO-MILKER is a new self-contained milking machine designed for the small as well as large dairies. Large dairies install two or more units. Mounted on wheels, it operates by electricity. The teat cups and suction method of milking are the same as those that have made the Sharples pipe line milker for large dairies famous.

THE SHARPLES MOTO-MILKER milks two cows at a time. With it one man or woman milks 15 cows in about 45 minutes. The cows like the SHARPLES MOTO-MILKER and there are hundreds of records where the cows give more milk when milked with it. No pipe lines, pulsators, tanks, stall cocks, or gauges necessary with THE SHARPLES MOTO-MILKER.

It has been proven by official tests on 108 dairies that the "Compressed Air Squeeze" of the SHARPLES MOTO-MILKER milks one-quarter to one-third faster than any other. Fast milking fosters increased milk flow.

THE SHARPLES MOTO-MILKER WILL SOON PAY FOR ITSELF IN WAGES SAVED AND IN INCREASED MILK. The action is natural—the most natural of any milker and anyone can operate it. WRITE FOR FREE DEMONSTRATION AND BOOKLET. IF YOU DO NOT HAVE ELECTRIC CURRENT WE CAN SUPPLY IT.

ARE YOU USING

GOPHER-SCENT?

The new method of killing gophers and squirrels.

Now is the time of the year to exterminate them and GOPHER-SCENT will kill them off so quick and sure that it will surprise you.

GOPHER-SCENT is a new method and a common sense, economical method of killing gophers and squirrels, fully demonstrated on this theory:

We all know that if fish is thrown in the yard it would be difficult to keep cats away. Why?

Because they like the taste and the scent attracts them. Gophers and squirrels are animals, too, and they have a taste for certain things.

GOPHER-SCENT is the one and only preparation that carries this scent and taste that gophers and squirrels like and which positively attracts and exterminates them. GOPHER-SCENT has met with instant success wherever sold.

GOPHER-SCENT is prepared in packages from 50 cents up. No mail orders filled. If your dealer doesn't handle GOPHER-SCENT notify us and we will supply him.

Washingtons: Jonathans, extra fancy, medium size, 3.00; fancy, 2.75.

Cranberries: Supplies limited, market steady. Early Blacks, 17.00 bbl.; one-third bbl. 4.50@4.75.

Figs: Supplies liberal, demand moderate, market weaker. Locals: Per box, 50@1.25.

Grapes: Supplies heavy, demand moderate, market steady. Per lb.: Muscats mostly 5@6, Cornichons 6@7, Malagas 6@7 per lb., Tokays 7@8, Red Emperors 7@8. Black wine grapes, 100.00; White wine grapes, 70.00@80.00.

Melons: Cantaloupes, small crate, 1.25@1.50, poorer 85@1.00; Honeydews, small crates, 75@90; per lb., 1@1¼; Casabas, 1@1½ lb.. Watermelons, ½@¾ lb.

Peaches: Demand moderate, market firm. Wide range in quality and condition, mostly ordinary. Freestones mostly 1.00@1.50 per lug; best 2.00. Clings mostly 1.00@1.50, according to quality, all varieties 5; few, 6½; poorer, 3@4.

Pears: Demand and movement moderate, market weak. Bartletts mostly 5; few 6; poorer, 3@4 per lb.

Pomegranates: Supplies moderate, lb., 7@9.

CITRUS FRUITS

Grapefruit: Supplies moderate, movement moderate, market firm. Local: market pack mostly 3.50@4.00; small, 2.50@3.00; special packed, 4.50@5.00.

Lemons: Supplies liberal. Demand moderate, market weak. Locals: special pack mostly 5.00@5.25; market pack, best, 3.50@4.00; poorer, 3.00@3.25; loose box, 2.00@2.50; lugs, 90@1.00.

Oranges: Supplies light, demand good, market firm. Special brands mostly 6.25@6.50; market pack, 3.50@4.25; small sizes, 2.75@3.00; loose boxes, 75@1.00, mostly 1.00@1.25.

HONEY

Supplies throughout California are becoming lighter, especially of sage and orange honeys. Most sage and orange stock is in producers' hands in small lots of less than 100 cases. Supplies of alfalfa, although still moderate, are declining. Demand moderate but steady. Market strong with prices advancing slightly. The small crop of fruit in the East, and the high prices of jams now on the market due partly to the high sugar level last year, are considered to be in part responsible for the increased eastern interest in honey. Carloads f. o. b. usual terms: White Orange 11½@12; White Sage 11½@12; Light Amber Sage 8@8½; Light Amber Alfalfa 6@6½, mostly 6½. Several cars of the 1920 crop of California sage, alfalfa and mesquite recently offered, but the supplies of the old crop have become very light.

Beeswax supplies liberal. Growers receiving 20@22 per pound for crude wax.

Barley: 100 ton lots, Dec. del. 1.26.
Milo: 100 ton lots, Dec. del. 1.45.

HAY

Alfalfa Growers of California report:

The market for alfalfa hay continued firm throughout the week under a good healthy demand in practically all parts of the state, which readily absorbed the offerings listed by growers for sale at current prices. Prices remained firm and unchanged in the central markets; in some of the local marketing districts sales were made at an advance of one and two dollars a ton. Damage from the last rains in Southern California turned about 2,000 tons of marketing hay of dairy quality into fertilizer quality. San Joaquin Valley growers report yield per acre for the season is below the usual average.

There were 1,070 tons of grain and alfalfa hay received on the Los Angeles tracks the week ending October 15, with 140 tons held over.

Prevailing prices, delivered in vicinity of Los Angeles:

Choice Rabbit Alfalfa	$28.00
Choice Dairy	25.00
No. 1 Dairy	22.00
Standard	17.00

Quotations by Nichols-Loomis Company. Following are prices to growers f. o. b. Los Angeles in carload lots; handling and commission must be added to obtain retail prices on new hay:

Tame Oats	20.00@26.00
Barley	16.00@24.00
Alfalfa, Rabbit	24.00@28.00
Alfalfa, No. 1 Dairy	19.00@21.00
Standard	16.00@18.00
Straw	12.00

Henderson Bush	5.15
Cranberries	5.75
Bayos	5.40
Blackeyes	3.50

HAY AND FEED

Alfalfa Growers of California, Inc. report:

Prevailing prices last week f. o. b. San Francisco:

Choice Dairy Alfalfa	16.00
Standard	15.00

A. W. Scott Co. says:

Receipts of hay during the week were 1,399 tons as compared with 911 tons of the previous week. Although receipts were much heavier the firmness of last week has continued and values have tended better. Several large shipments have been reported moving from one portion of the interior to another and somewhat of demand has increased from the southern part of the state. Alfalfa has been moving in increased quantity and demand from all over the state has been much better. Quite a bit has been shipped lately and the surplus has been taken care of comfortably as it was ready for market.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the markets in San Francisco (for prices to consumers, charges of switching, cartage, commission and handling expenses must be added, according to conditions).

Wheat Hay No. 1	16.00@18.00
Wheat Hay, fair grade	13.00@16.00
Tame Oat Hay	13.00@15.00
Wild Oat Hay	10.00@12.00

Citrus Markets

Los Angeles, Oct. 19, 1921.

Summer fruits less in evidence. Valencias are commanding more attention and very satisfactory prices are being received. California grapes are still going forward rapidly but a shortage of refrigeration cars is holding back much which should be going forward. Valencias are commanding between $5 and $6 f. o. b. and some sales are being made in auctions approaching the $10 mark.

Lemons are meeting with good demand though some sales of indifferent stock are not at very satisfactory prices. First class stock is commanding around 4.00@4.50 f. o. b.

Shipments

Shipments of citrus fruits to date since November 1, 1920, Southern California: Oranges, 40,205 cars; lemons, 11,299; total, 51,504. To same date last season: Oranges, 29,729; lemons, 8,266; total, 37,995. From Central California to date this season: Oranges, 6,658; lemons, 212; total, 6,870. To same date last season: Oranges, 5,383; lemons, 288; total 5,671. From Northern California to date this season: Oranges, 305; lemons, 5; total, 310. To same date last season: Oranges, 261, lemons, 23; total 284.

THE FESTIVAL OF DATES

By Carl Downing

IN a display such as has never before been attempted in the United States Coachella Valley will, October 21, 22 and 23, tell the world that the most profitable fruit in all the world, the finest and most costly fruit grown, may be commercially produced there. For then it is that the International Festival of Dates will be held at Indio, and every grower in Coachella Valley, every business man and every land owner whatever he grows is behind this fair with his pocketbook and his enthusiasm. The people of Coachella Valley, which once upon a time was called the "desert," will show that the sagebrush has been displaced by gardens that will make California known better than it has ever been known before. After 17 years of toil and experiment the date is established as a commercial fact.

There are in Coachella Valley some 55,000 acres suitable for dates of which about 1,200 acres have been planted. There are more than 600 acres of seedlings, but the seedling holds the same relation to the date that the seedling orange does to the fine varieties. While many like the taste of the seedling as well as that of the higher priced varieties, it does not keep so well. Growers this year, however, have been selling fresh seedling dates at 40 cents per pound and have been making big money. There is no doubt an acre of good seedling dates is as valuable as an acre of Valencia oranges.

AYRSHIRE BREEDERS

The Ayrshire breeders of California will meet at Hotel Bellveu in San Francisco at 8 p. m. on the evening of October 26 for the purpose of forming a state organization.

CATTLEMEN'S ASSOCIATION REPORT

October 17, 1921: During the first week of this month packing companies at Los Angeles bought cattle in the Kansas City market, paying $4 for several cars of grass fed cows and $5.20 for about 20 cars of grass fed steers. Taking into account freight rate, shrinkage, and loss due to bruises, this price is equivalent to at least $7 in California. Due to our shortage of prime beef as well as feeders and stock cattle in California, packers will undoubtedly find it necessary to occasionally buy outside the state. The association feels, however, that California cattlemen should receive first consideration and should be paid an equal price. Sales have been reported from San Francisco Bay counties, averaging 6½c for steers f. o. b. ranch. One or two loads have sold for 7c. These cattle can be put on the market for one-quarter cent freight rate. Sales in Tulare County of prime steers now on good stubble are reported for November and December delivery. November deliveries will bring 7c and December deliveries 7½c. They will be weighed on the ranch and will average about 1,100 pounds. These are for local delivery. Reports reach us that local banks need considerable education regarding the War Finance Corporation money to cattlemen. Most local banks are cooperating 100 per cent. The California. Cattlemen's Association stands ready to assist wherever any local bank is reported to appear unwilling to help secure War Finance Corporation funds on cattle. Report all such cases. Do not ship on consignment. Sell only f. o. b. ranch. Offer only prime cattle for sale. Beware of the speculative buyer who does not buy directly for a packing company. He is most active on a rising market. His profit belongs to you.—R. M. Hagen, Secretary.

Mutual Husbandry Club

NOW BEING FORMED TO DEVELOP A

New Irrigation District in Fresno County

Let us tell you all the details of the Mutual Husbandry Club. There are thousands of acres of land in Fresno County with unlimited agricultural possibilities when put under irrigation.

We want 500 members to vote the district — more than 250 have already joined. Members of the Club can obtain land at dry land prices of $50.00 per acre. Big profits can be made when district is voted.

MAIL THIS COUPON TODAY

88 REGISTERED HOLSTEINS 88
AT PUBLIC AUCTION

Palo Alto Stock Farm
Palo Alto, Calif.
Wednesday, November 9
at 10 A.M.

This offering, the first individual public sale from this well known herd; is composed very largely of young cows and heifers of famous blood lines, many with excellent short or long time records, or both, and includes a large number of daughters of

KING PONTIAC SEGIS KORNDYKE, who now has 31 A. R. O. daughters. He is a 30-pound son of King Segis De Kol Korndyke, full brother to King Segis Pontiac.

FINDERNE KORNDYKE NETHERLAND, a son of King Pontiac Segis Korndyke, out of a 31-lb. daughter of Gordon Glen Pontiac.

CARNATION SEGIS WALKER, a son of Johanna McKinley Segis, out of a paternal sister to Segis Pietertje Prospect, the world's record milk cow.

RAG APPLE IMPERIAL KORNDYKE, proven son of Rag Apple Korndyke, and whose daughters are now making some excellent long time records.

This sale affords a great opportunity for selection of young females bred in some of the greatest producing lines of the breed.

EVERY ANIMAL POSITIVELY GUARANTEED TO BE A BREEDER; EVERY ANIMAL OVER SIX MONTHS OLD TUBERCULIN TESTED AND SOLD SUBJECT TO RETEST BY THE BUYER.

35 TOP NOTCH HEREFORDS
— AT PUBLIC AUCTION —
California National Livestock Show Grounds

SAN FRANCISCO
Wednesday, October 26, at 1 P.M.

Providing an opportunity right at home to buy Herefords of most approved character and breeding. The cattle for this sale will be seleeted largely from the show herds of leading breeders in Nevada, Oregon and California, by a committee representing

Pacific Coast Hereford Cattle Breeders Association

J. I. Cazier, President — J. A. Bunting, Secretary

The wonderful exhibit of young Herefords at this year's California State Fair was a revelation of the amazing progress the breed has made in California during the past few years, a progress that is right now only at its beginning.

Why not lay your foundation in this sale for one of the most useful, most profitable agricultural activities—the breeding of registered Herefords.

We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

If among the more than 40,000 Cultivator's weekly circulation any fail to find any article they desire to purchase advertised in the Cultivator's columns, a special request is extended you to let your wants be known to the California Cultivator and we will place you in touch with proper parties.

EDITORIALETTES

The banquet tables shown on the cover are loaded down with 500 pounds of California's finest avocados. The load is soon lifted, however, in gratification of the appetites of the several hundred people shown gathered about the tables. That banquet is abundant evidence of the interest of Californians in this newest of the old-time fruits.

* * *

R. N. Wilson, scretary of the agricultural legislative committee, on the convention floor in Los Angeles this week reviewed some of the accomplishments of the committee, or, rather, some of the steps necessary to take to secure recognition in the state legislature of the California farmer. Heretofore, the lobby has been largely dominated by "The Interests," and "lobby" is not even yet considered as entitled to admission to the best society. But this committee went squarely after what it wanted, and it let the fact be known that California farmers to the number of 60,000 were squarely behind the committee and were going to know the reason why if the more important legislation requested was not granted. This attitude and the cut of Wilson's jaw was sufficient, and the farmer got what he went after—at least in part. He is going after more, which he will get, and at the same time insist on quick justice to all other classes. The legislative committee which was appointed two years ago at Chico is still in existence, and unanimous action at the Los Angeles convention continues the same membership.

* * *

Will the fruit growers secure an all inclusive, nation wide organization which shall market, or at least aid in marketing, fruits of the United States? The question was brought up in the recent convention when it was announced that two California delegates had been selected to represent the farm bureaus of this state at the meeting of the American Farm Bureau Federation. California's delegates are Sheridan W. Baker of Santa Rosa and Mr. Edwards of Redlands. Delegates from other states of the Union bring the total membership of this committee up to 21, and it is anticipated that it will discuss the general fruit situation of the United States from a producer's standpoint and possibly may secure the organization of the fruit growers somewhat along the line of that of the U. S. Grain Growers, Inc., which already has under contract from American farmers over 30,000,000 bushels of wheat.

* * *

So far as any expression was made on the floor of the convention Californians will welcome an organization somewhat along the line of the Citrus Protective League which pays no attention whatever to marketing, leaving that to the individual shippers or associations but taking cognizance of national legislation, transportation and others of the larger problems affecting all interests alike. But to make this new force a marketing organization to supervise cooperative marketing associations as now formed, expressions of California fruit growers are almost unanimous as opposed to such a movement. As Mr. McKevitt remarked: "The difference between California and Eastern fruits in nature or character and in location and the problems which come because of these differences are so great that it is impossible to handle these two great producing sections from one central office."

* * *

Wherein there may be closer affiliation, however, between Eastern and Coast fruit growers is for both, working through, perhaps, the bureau of marketing and crop reporting, to give to each other more definite information as to markets to which fruit is being shipped, the earliness or lateness of the season, quantities as compared with other years, consumers purchasing power and numberless other items which would aid materially in placing fruit where needed and with much lower percentage of losses than is all too common.

THE CULTIVATOR MOVES

After a third of a century within stone's throw of First and Broadway, Los Angeles, the California Cultivator has moved. The new location is at 317 Publishers Trade Building, Third and Central Avenue. This move has been made necessary through the increase in the business of the Cultivator. The larger space in the new quarters makes for effective work in the entire publication department. New presses and more linotype machines demanded have nessitated more room; the mailing facilities have been increased; and elevators and modern equipment generally will make for a better Cultivator than ever before.

With the Cultivator a number of other publications are centered in the new location. It is a bit removed from the Cultivator's beaten path, but a most cordial welcome will always be extended to friends of the California Cultivator.

Remember the new location, 317 Publishers Trade Building, near Third and Central Avenue. It is but a short distance from the Southern Pacific Station.

SHIP BY WATER

Some fruit growers are rather hard hearted as to the sorrows of the higher officials in our big transportation companies. But there are others who may be influenced by burning eloquence and smooth logic, and these had an opportunity to feel genuine sorrow for these officials in the fruit growers convention.

The losses to fruit growers and to vegetable shippers and others have been recounted, and the excessive freight charges referred to, but after eloquent and logical presentation of the case of the railroads it appeared that the difficulties confronting the railroads are so infinitely greater than are those of the fruit producers that they, the fruit producers, may yet come with the suggestion that their present rates be raised. More seriously, there are two sides to the transportation problem, but the injustice suffered these many years by the fruit shippers has put the grower into an attitude of everlasting antagonism so that it is hard to give simple justice to an institution which has, at times at least, been more or less shifty.

A case in point: The recent offer to reduce freight rates on citrus fruits if citrus growers would discontinue water shipments. Another: Offer by the Western roads to make material reduction providing Eastern roads would participate in the reduction. This passing of the buck resulted, as anticipated, in failure to get any reduction. All of which is very enlightening but darned unsatisfactory.

Meantime the citrus fruit shippers have committees at work formulating plans for a line of ships all their own. Shippers the country over are holding their breaths and wondering, "Dare they do it." Establishing a line of a half dozen or more ships to ply between Atlantic and Pacific ports involves vastly more than the layman at first imagines. Not only must millions be raised to purchase or guarantee leases on ships, but arrangements must be made for dockage and initial transportation, and then at the consumer's end, other dockage or opportunity for disposal of the fruits to dealers. At present practically all available pier space for auctions or other fruit disposal is under control of the railways. The railways, naturally, are not particularly solicitous as to the success of the movement, hence are not offering material accommodations to any new line of ships.

Some exceptionally long thoughts are required before California fruit growers will have their line of ships established. But California fruit growers have handled some big things, and their present effort is well worth watching, and a great number of us are saying: "God speed you."

OPEN THE DOOR

At the Fresno convention of the state nurserymen there was one open meeting which gave to the people of Fresno a fund of information as to the importance of the nursery industry to California. That meeting was in a large assembly hall decorated with a vast quantity of products of California nurseries and flower gardens. Hundreds of Fresno people listened to addresses on the industry, and we believe the meeting resulted in much of good and of publicity for the industry.

The Los Angeles meeting just ended was conducted along materially different lines. The assembly hall was in the basement of the Armory Building and notwithstanding liberal decoration with palms lacked the cheer and brightness so necessary to fullest enjoyment. We do not think that at any session there were more than two or three dozen people present. Of course those who attended were vitally interested in the industry and so far as business sessions were concerned perhaps as much was accomplished as was desired but the fact still remains that opportunity for a great amount of publicity and for creating good-will and giving information as to the magnitude of the business represented by attendants from all parts of the state was lost, this in part because it was necessary for many who would attend to do so only through the gates of the flower show, which called for a 50 cent admission fee.

California Cultivator

Vol. LVII, No. 18 | Los Angeles, October 29, 1921 | One Dollar Yearly

A Great Convention Week for the Big Four

THE NURSERYMEN'S CONVENTION

By Ernest Braunton

THE eleventh annual convention of The California Association of Nurserymen opened at Armory Hall, Exposition Park, Los Angeles, October 20, at 1:30 P. M., the entire forenoon's program, as printed, being waived to give the members a chance to first see the mammoth flower show staged on the same dates as the convention. Even after luncheon the attendance was light, but the program was carried out as printed.

The first number was "The Bergtholdt Plan: What It Means To Nurserymen," by Past President J. E. Bertholdt of Newcastle.

The next was a paper on The Nursery Industry and Taxation, by E. D. Moore, followed by one on Nurserymen's Bud Selection Association: Its Progress, which will appear in a future issue. A most valuable paper was then read on Quarantine No. 37 and the Plant Industry, by Dr. R. Kent Beattie, pathological inspector federal quarantine board, of Washington, D. C. This paper will appear in full in our early issue.

Walter B. Clarke of San Jose then read a comprehensive paper on the possibilities of California supplying American markets with nursery products heretofore imported. Bulbs were first dealt with and Mr. Clarke showed that nearly all the leading ones can be successfully produced here but some sorts are still imported at such low prices as to prohibit commercial culture in California. In shrubs the outlook is very promising and the amount of such stock is rapidly increasing. In kentia palms an unusual activity is reported. A firm at Sierra Madre, Los Angeles County, has a growing stock of more than a million plants, while nearby Montebello has 300,000, Santa Barbara reports 30,000, and there are many smaller lots. California is at present producing annually more than 3,000,000 rose bushes.

The other papers read and speeches made the Cultivator will give in full or notes of mention in future issues. Owing to lack of time or conflicting attractions some were not given, reports of committees were not read or filed, but all will eventually reach the secretary.

On Friday afternoon a considerable number of delegates were lured from the flower show to visit the plant growing establishments of Wilcox & Co. and Howard & Smith, Montebello; Bassett & Washburn, Sierra Madre, and the large gardens of H. E. Huntington at San Marino. On Saturday afternoon a similar trip was made to the plants of the Beverly Hills Nurseries and Armacost & Co., Sawtelle.

Saturday forenoon officers for the year 1922 were elected as follows: President, J. W. Barnicott, Newcastle; vice-president, Donald MacLaren, San Francisco; secretary-treasurer, H. W. Kruckeberg, Los Angeles.

NEWS FROM THE CONVENTIONS

By C. B. Messenger

IT has been a lively convention week. The nurserymen were first to open their sessions on Thursday afternoon. So many of them were busy with the installation of exhibits that the attendance was not so large as anticipated. Reports of various committees, including legislation, transportation, etc., were deferred, and the afternoon program began with discussion by J. E. Bergtholdt of Newcastle. Mr. Bergtholdt outlined his plan in effect that it included two features. The first was to educate the housewives of America in the necessity of greater consumption of California fruit, this to be accomplished through cooperation of all the housewives and distribution of millions of copies of a book which should have value in educating as to healthfulness of California fruit, the book to be edited by one who could make it a classic or a publication which would be so sought that it would reach practicaly all the country's hundred million inhabitants. California's fruit industry aggregating 250 million dollars per year, together with several thousands of millions of investment, is amply able to finance such a publication. The second part of his program has to do with an educational and selling campaign with the trade of the country, this to be taken up especially with retailers with the general plan that they shall be induced, so far as possible, to specialize on California products. Mr. Bergtholdt does not expect a half, nor a fourth, nor perhaps a tenth of the grocers to unite in this campaign but he feels sure there are some who will in every community.

California is growing more and more fruit and has lands capable of producing manifold more than at present, and as that industry grows and prospers California's prosperity will increase.

Saturday afternoon's session was devoted entirely to the avocado. Addresses were made by Robert W. Hodgson, Los Angeles County farm adviser, Dr. J. Eliot Coit, Director Hecke and others. Dr. Coit touched upon the avocado, the tree, the fruit, the industry. Mr. Hodgson enlarged upon its food qualities, its healthfulness, and the desirability of extending use among all the people. Director Hecke brought greetings from the state department of agriculture and urged that the avocado growers use the department, which stands ready to serve at all times and in every way possible. The officers of the association are W. L. Hardin, president; A. F. Yaggy, vice-president; J. M. Elliott, treasurer; R. Agnes McNally, secretary.

The nurseymen's annual banquet was combined with the banquet of the Avocado Association and was held at the Ambassador Hotel. The best comment on attendance is given on cover page of this issue.

A Group of Nurserymen and Members of the Ladies' Auxiliary.

George H. Hecke, director of state department of agriculture, is in the center foreground. At his left is Henry Kruckeberg, secretary-treasurer of the California Association of Nurserymen. Next to the right is J. W. Barnicott, president of the association. At his left is Roy F. Wilcox, past president of the association.

President Hardin of the Avocado Association acted as toastmaster and held both speakers and audience well in hand. He expressly requested all speakers to make their remarks as short and to the point as possible, this for two reasons, first, many wished to break away to attend the flower show and besides, as he suggested, a good speech is like a woman's dress, it must be long enough to cover the subject and short enough to be interesting. The speakers to a man obeyed his request.

Former President Wilcox gave a short review in which he touched upon the magnitude of the nursery industry and especially referred to the promise of that comparatively new fruit, the avocado.

J. M. Elliott, who has large avocado interests in the North Whittier section, gave a few notes from its history since the days when the Spaniards first landed on the New World shores and saw the fruit which, as nearly as they could learn its pronunciation, was called the avocado. He touched especially upon the efforts of the government to introduce new varieties by sending explorers to practically all semi-tropical and tropical countries. But in all the world there are no finer avocados grown than may be produced by proper selection and tilth in California. We must propagate, disseminate, standardize.

Mr. Barnicott, new president of the Nurserymen's Association, appreciated the opportunity of commending nurserymen and avocado growers for their ability to get together in a sociable, friendly way.

Secretary Kruckeberg gave some figures which show the magnitude of the nursery and seed industry of California. From recent estimates it appears that the annual turnover in the nursery trade of this state is in excess of $10,000,000. This is thought to put California in the front rank of the nursery trade of the country. New York is the nearest competitor and produces very nearly the same amount as does this state, but in seed production California easily stands first with an annual value of more than $17,000,000.

The state fruit growers convention opened on Monday morning with good attendance and a program which brought attendants from practically every county in the state. The representation from the north was exceptionally strong, and there were many representatives of the U. S. department of agriculture. The program is being followed as given in the California Cultivator, the most interesting features being those having to do with transportation. The transportation committee's report and addresses made brought out very warm support of the railroads from officials of the Santa Fe and the Southern Pacific. These addresses are causing comeback on the part of California fruit growers and shippers which is giving real pep and punch to the program. Particulars in next issue.

FARMER COOPERATORS NO TRUST

The right of farmers to unite and employ business methods in the disposal of their products is being recognized and even demanded. There is deep resentment of the treatment which has been given them, and the following resolutions presented on the floor of the state fruit growers convention by Col. Weinstock met with rousing and unanimous approval:

Whereas, the farmers of this country in their endeavors to organize and maintain cooperative marketing associations which have for their end the establishing of high product standards, the elimination of waste in the cost of distribution, the broadening of markets and the stabilizing of prices, all in the common interest of producer and consumer; and

Whereas, the opponents to such activities, confined as a rule to speculative buyers and great vested interests, have left nothing undone to hamper, to harrass and to destroy such associations; and

Whereas, in such endeavors farmers and their associations have at various times been indicted for alleged violations of the Sherman anti-trust law, and despite the fact that no convictions have been secured because of the baseless character of the indictments, the farmers have, nevertheless, been subjected to humiliating imprisonment pending trial, to costs in defending themselves in excess of $100,000, and the scorn of the public for the time being as alleged profiteers and exploiters; and

Whereas, the claim made by opponents that such cooperative marketing associations tend to create possible

(Continued on Page 442.)

Agricultural News Notes of the Pacific Coast

Northern California

Sonoma County's grape harvest is practically over.

Forty sacks of paddy to the acre is reported by a rice grower east of Arbuckle.

The Lodi Sentinel reports this year's grape crop already 4,000 cars ahead of last season.

The Farmers Protective Association meets at Pleasanton, Alameda County, today, October 22.

Shortage of refrigerator cars has seriously embarrassed San Joaquin County grape shippers.

The Lodi district of San Joaquin County had up to October 13 more than 11,000 carloads of grapes.

The California Bean Growers Association has planned a series of meetings to enlarge its membership.

Grape growers of Sonoma County are now assured of 40 refrigerator cars daily for shipment of their grapes.

The Pacific Fruit Exchange reports sale in one day last week of 32 carloads of Tokays and Zinfandels for $63,226.

Yuba County supervisors have asked the state highway commission to locate the Ukiah-Tahoe highway on the north side of the Yuba River.

There have been so many thefts from vineyards near Lodi, San Joaquin County, that growers estimate at least $20,000 worth have been stolen this season.

A tractor school will be held in Sonoma County, December 11-24, location yet to be determined. The farm adviser's office at Santa Rosa will furnish information.

Secretary Ross of the Lodi Growers and Shippers League says that close to 95 per cent of the district's Zinfandel grapes have been shipped and 50 per cent of other varieties handled.

Horticultural Commissioner Stabler of Sutter County reports that there are now 27,326 acres of trees and vines in Sutter County with 14,657 acres in bearing. Peaches, mostly the canning varieties, lead with 5,220 in bearing.

Hearings to establish a basis for rate adjustments of the principal electric power companies of Northern California are scheduled by the state railroad commission for the three months beginning October 25. Commissioner Chester H. Rowell will preside at the investigations.

Methods and practice of graftage, as well as actual practice in grafting, will form an important part of the Deciduous Fruits Short Course to be given by the University of California at Davis, November 28 to December 10. Members of the course will be furnished with the proper tools and will actually perform the operations of graftage under the direction of skilled instructors.

California Fruit Growers and Shippers Protective League has been organized to work for reduction in freight rates. The officers are: President, F. H. Buck, San Francisco; vice-president, George H. Cutler, Sacramento; second vice-president, Scott F. Ennis, Sacramento; secretary-treasurer, F. B. McKevitt, Sacramento; executive committee, F. H. Buck, George H. Cutler, Scott F. Ennis F. B. McKevitt, J. E. Bergtholdt of Newcastle and Frank T. Swett of San Francisco.

Central California

Fresno County has one automobile for every four persons.

Prune growers of Richgrove, Tulare County, have sold their dried fruit at $140 per ton.

The Inyo County fair held at Bishop October 4-5 showed an exceedingly fine lot of poultry.

The Ceres center of the Stanislaus County farm bureau met October 27 to discuss sanitation.

Nine boys from Tulare County pig clubs attended the annual convention at Davis last week.

Sequoia and General Grant national parks showed an attendance last season of nearly 60,000.

A carload of strawberries was shipped from Watsonville to New York the last of September.

Oakdale, Stanislaus County, shipped out six carloads of almonds last week, four going from the association plant.

W. V. Shear of the state department of agriculture has been giving demonstrations in potato grading in Inyo County.

Dr. Boncquet of Tulare County claims that the orange standardization worked out last year was entirely unscientific.

The almond crop in the Richgrove district of Tulare County has proven very spotted, some sections having heavy crops, others giving poor yield.

Farm Adviser Mayhew of Monterey recently gave field demonstrations in eradicating morning glory by use of carbon bisulphide.

Hog auction sales will be held in Kern County at McFarland, November 25; Wasco, December 3; Bakersfield, 17; McFarland, 23.

The Libby, McNeil & Libby cannery at Selma, Fresno County, employs from 300 to 700 workers during the year, a large proportion of whom are women.

President Walker of the State Farm Bureau Federation addressed Monterey County farmers at Lockwood last week on bulk handling of grain and cooperative marketing.

Waterford's annual harvest festival and community fair brought out a very large attendance. It was held under the auspices of several improvement societies of that section.

The second crop of Muscats in Kings County shows well over the required content of sugar, having more favorable weather than the first crop

Tulare County will ship about 125 carloads of pomegranates. The Tulare County Lemon and Grapefruit Growers Association reports return to growers of from five to nine cents net from these shipments.

Prof. W. V. Cruess of the state university is telling olive growers that they can ship olives more satisfactorily to Eastern points in brine than in lug boxes. He believes that a considerable market may be developed for these brined olives for home pickling.

The appointment of J. O. McKinney, formerly deputy commissioner of Monterey County, as horticultural commission of San Benito County has just been announced. Mr. McKinney succeeds Donald L. Currier who resiged to accept a position with the San Jose Spray Manufacturing Company.

Southern California

Date Festival at Indio, October 21-23.

A fair was held at El Centro, October 22-28.

More than 60 fumigation crews are operating in Los Angeles County.

Santa Barbara County now has a farm bureau marketing exchange.

Farmers and Fruit Growers Convention at Los Angeles last week.

Estimate for the walnut output of Ventura County is 60 per cent of normal.

Membership dues of the Los Angeles County farm bureau will remain at $2.50.

Avocado Day at the Farmers and Fruit Growers Convention at Los Angeles, October 29.

The Santa Ana Walnut Growers' Association expects to ship 2,000 tons of nuts this season.

A new high school district will be formed of the Simi and Susana districts of Ventura County.

Heavy morning dews have retarded cotton picking in the Palo Verde Valley of Riverside County.

M. A. Schofield gave daily lectures on poultry feeding and care during the El Centro fair, October 24-28.

Farm Adviser Garthwaite of Imperial County is working on a plan to establish vineyards in various sections of the valley.

Riverside County has just expended $10,000 on repairs to the Palm Springs road putting it in good traveling condition before the Date Festival.

The agricultural extension service has made arrangements for a school of beekeeping to be held at Exposition Park, Los Angeles, December 5-10.

Manager Liebert of the farm bureau exchange has called upon alfalfa and milo growers of the Imperial Valley to sell only through the exchange.

Manager Liebert of the farm bureau exchange of Imperial County says that all preliminary arrangements have been made for marketing quality birds.

The U. S. biological survey has sent E. R. Kalmbach to the Imperial Valley to study blackbird control. He has established headquarters near Wiest.

Representatives of Orange, Riverside and San Bernardino Counties recently made a tour of check dams used in flood protection work in Los Angeles County.

The California Prune and Apricot Growers Association has been advanced a million and a quarter dollars by the War Finance Corporation for loans to grower members.

Local farm bureau meetings will be held in Los Angeles County at Pomona and Tierra Bonita, November 2; Zelzah, 2; Alhambra and Lankershim, 3; Whittier and San Fernando, 4.

A conference of the registered fertilizer manufacturers and dealers of California was called by the director of the state department of agriculture at Los Angeles on Wednesday, October 26.

The annual stockholders' meeting of Imperial Valley Vegetable and Melon Growers' Association was held at Calipatria last week. J. E. O'Neil was elected president and S. B. Folds secretary. It is expected that branch offices will be opened in other sections of the valley when the season opens.

The Coast and General

The potato crop in Northern Arizona is unusually good.

A large number of feeder cattle are being brought into Arizona from Mexico.

The Western Washington fair held at Puyallup brought out an attendance of 20,000.

Owing to severe trimming of palms for scale the date crop of Arizona is rather short.

The Western Royal Livestock Show is now being held at Spokane and will close November 2.

One of the strongest features at the state fair at Yakima in Washington was the poultry show.

The Southern California Edison Company has filed applications for water rights on the Colorado River totaling 4,500,000 horsepower.

An unusually fine exhibit of honey was shown at the recent interstate fair at Spokane. Sweepstakes premium was won by an Idaho firm.

The Washington Farmer says that "Never before in the history of Washington have the small local livestock shows and fairs been so successful."

Heavy losses to alfalfa seed growers resulted from the recent flood in the Salt River Valley and Yuma districts of Arizona; loss to cotton growers not heavy.

Cotton picking is in full swing in both the Salt River valley and the Yuma districts of Arizona though some shortage of help is reported in the last named.

Recent dry weather in Arizona has been very favorable to cotton picking but many fields in both Salt River and Yuma Valleys have not yet been touched.

Large numbers of cattle are being shipped from the northeastern plateau and from the Seligman district of Arizona, many of which are ready for slaughter.

The Montana Farmer reports a New Yorker visiting the state fair this year and asking where the summer fallows were exhibited. It seems he thought they were vegetables.

At the meeting of the Oregon Holstein Cattle Club held during state fair week at Salem it was decided to have a booth at the Pacific International at Portland, November 5-12.

The quarantine order relating to alfalfa weevil was amended on September 30 to include the counties of Storey and Ormsby, Nevada. Washoe and White Pine were already under quarantine.

The annual meeting of the Oregon Cattle Club was held during state fair week at Salem. G. G. Hewitt of Independence was elected president and Ivan Loughery of Mommouth secretary.

In effort to control aphis the Cawthorn Institute of Nelson, New Zealand, has requested and received from the California department of agriculture a shipment of Hippodamia convergens.

The cost of making the St. Lawrence River between Lake Ontario and Montreal navigable to deep sea vessels is estimated at something over a quarter of a billion dollars by United States and Canadian government engineers.

California's Water and Power Resources

By Wm. J. Locke in Pacific Municipalities

IN June 10, 1920, the president signed the so-called Federal Power Act, a measure which is destined to be of tremendous importance to the country as a whole and especially to the Pacific Coast.

The act is intended to stimulate the conservation of our water resources for the acomplishment of three purposes, to-wit: the development and use of hydro-electric power, its subsequent utilization for irrigation and finally for protection against floods.

The act by express language gives a preferred right to the states, municipalities and other political subdivisions as against the private corporations, providing that licenses for the development of power by states or municipalities shall be issued and enjoyed without charge to the extent that such power is sold to the public without profit or is used for state or municipal purposes.

Importancc of Irrigation

Of all the states in the Union California is able to derive the greatest benefit from this act. From the Oregon line southward for two-thirds the state's length and running parallel thereto are two great ranges of mountains, the Sierra Nevada and the Coast Range, while lying between are two of the largest valleys in the world. On account of our peculiar climatic conditions and lack of rain during the summer months irrigation on an elaborate scale is necessary in order to bring these valleys up to their highest state of productivity.

The country around Turlock and Modesto is an example of the wonderful possibilities of irrigation. On the west side of the same valley ranging from Tracy all the way down to Coalinga are lands capable of the same high development and the same possibilities. All that is lacking is that life giving fluid, water, in order to transform these lands into fertile gardens of wealth and beauty.

Flood Control

As to a sufficiency of water for the whole state there is no question. All that is required is its proper conservation and distribution. Millions of gallons are now carried to sea annually during the freshet season which frequently after a heavy winter is followed by disastrous floods over large areas of the low lands, resulting in many thousands of dollars in damage.

Restraining dams in the mountains would prevent a recurrence of these periodic floods and resultant loss. Hence it will be seen that the benefits to be derived from a conservation of our water resources are not limited to irrigation and the development of power.

Power from White Coal

During the past decade worldwide attention has been called to the advantages of utilizing the power of falling water. This has been stimulated by recent improvements in the transmission of electricity whereby the losses which resulted from transmission in its early development have been greatly reduced. However, the most important stimulus was undoubtedly due to the great increase in the use of machinery, followed by the ever increasing supply of fuel and a constantly rising cost. During the past few years fuel oil has advanced in price over 100 per cent, and it is universally conceded that sooner or later the supply of oil will be exhausted. Furthermore, oil and coal, when once consumed are gone forever, whereas nature brings "white coal" back to the mountains every year so that it may be used over and over again. Therefore it will be readily seen that the development of our water and power resources is the most important matter now confronting this great commonwealth.

California as a state must compete against other states for population and industry. In order to win it must offer to its citizens more than other states.

Two things are necessary for success. They are land and energy.

In California land must have water. The state has no coal, and its oil supply will fail. But it has 15 per cent of the potential hydro-electric resources of the United States. Hence, the two factors for success are water and power.

There are about 8,000,000 acres of land in California which may be irrigated, and there is water enough runnig to waste to irrigate this land, supply domestic and industrial needs and develop supplies of power sufficient to meet all possible demands.

These resources can be developed by the people and distributed to users on a cost basis. This will mean millions of new acres under cultivation, great industrial and manufacturing development, low rates for farmers, householders and manufacturers, and a tremendous and continuing increase in population and wealth.

Public vs Private Development

Water, like light and air, has always been regarded as one commodity that should never be subject to private ownership or control. The human mind repels the very thought of such a thing. Without these three elements—air, light and water—life would be impossible. They have been given to man by God Almighty himself and are the common heritage of all. Therefore, it is most repugnant to think of water or the use of water becoming the property of an individual or private corporation.

The business of generating hydro-electric power in California to a very large extent is now in the hands of four large private corporations founded by the consolidation of many small companies. There is talk of further consolidation so that ultimately the light and power business of the state will be entirely in the hands of two or perhaps only one large private corporation which will be able to exact a profit from every lamp that's burned and every wheel that's turned in this great state.

There is every argument in favor of development by the state. In the first place the state can obtain the funds required much cheaper than the private corporations. The state will have no difficulty in floating its bonds on a 5½ per cent basis, whereas the private companies would have to pay at least two per cent more. At the present writing it is reported that the six per cent bonds of one of the largest privately owned utility companies in the state are on sale for $78 per share, or $22 below par. This is something to think about.

The private companies are repeatedly declaring that public ownership and operation is a failure, that it is inefficient and wasteful.

In California today there are 119 cases of municipally owned water works, 24 electric light and gas plants, and in practically every case they have maintained lower rates and have given better service than the others which are privately owned.

There is evidence that the power companies and allied financial interests will base their campaign against the measure on an effort to align the north against the south and the city against the country. "Keep the state divided" is to be their campaign slogan.

The committee that assisted in preparing the new act includes men and women from the north and the south, the city and the country, and all have been zealous champions of the rights of their respective communities for years. It is sufficient to cite the public records of these men and women as final and absolute disproof of the charge that any one of them could or would participate in a plan designed to give one section an advantage over another.

The only advantage sought by the originators of this measure is the advantage of California. The one most imperative duty of all the citizens of California today is to unite on a program of California development—not of San Francisco or Los Angeles or San Joaquin or Sacramento Valley development, but of the whole State of California from one end to the other.

How to Make and Use a Rain Gauge

By Dr. Ford A. Carpenter, Consulting Meteorologist

THE rain gauge is one of the oldest weather instruments. Tradition has it that Korea boasted a rain gauge of stone which was in use over a thousand years, and the early records at Jerusalem contain accurate rainfall measurements over a much longer period. Of the two important meteorological elements of temperature and rainfall the latter is the more easily measured. The variation in rainfall is fully as great as that of temperature so that every ranch owner should have a rain gauge and keep careful records.

Making a Rain Gauge

A standard rain gauge may be purchased of any dealer in scientific instruments for about $10, but any person handy with tinsmith shears and a soldering iron may readily make one at a cost of not over $2 for material.

The accompanying photograph shows a standard rain gauge, weather bureau pattern. The man in the photograph is holding the receiver which is funnel shaped and has a diameter of 8 inches. In his left hand he displays the measuring tube which is 2.53 inches in diameter and 20 inches long. In the center of the picture, in an upright position, is the overflow receptacle into which the other two parts of the rain gauge are placed.

The overflow receptacle is 8 inches in diameter and about 24 inches long. It, as well as the other parts of the gauge, may be made of zinc or galvanized iron. The measuring tube is 20 inches long and exactly 2.53 inches in diameter and is generally made of calibrated brass tubing. As brass tubing of this size is difficult to purchase satisfactory results may be obtained by making a tube of the requisite dimensions in this fashion: Cut a strip of zinc or galvanized iron 20 inches long and 7 15-16 inches wide, roll it in the form of a tube with edges flush (not overlapping) and solder a one-half inch strip of the same metal the entire length of the tube. This strip being on the outside does not affect the accuracy of the tube; it also strengthens it. Complete the job by soldering a base to the tube. The funnel will be a more difficult undertaking, but by cutting a paper pattern (which procedure should be followed in all of this work) and being governed by the dimensions given and the shape shown in the illustration, there should be no reason why the work should not be satisfactory.

The measuring stick is a thin strip of cedar or other soft wood, three-quarters of an inch wide and one-eighth of an inch thick graduated into inches and tenths of inches. To measure the rain put this stick into the inner tube and note the depth of water. Owing to the ratio of the inner tube to the receiving funnel a tenth of an inch on the measuring stick represents one one-hundredth inch of rain. The measuring tube, being 20 inches long, will hold exactly 2.00 inches of rain. Rainfall is always recorded in inches and hundredths.

In case the rainfall exceeds two inches the surplus will drain out of the loosely fitted top into the overflow can

(Continued on Page 444.)

A Rain Gauge

The man in the picture is holding the "receiver" of the rain gauge in his right hand and the "measuring tube" in his left. These fit together and are placed inside of the large cylinder which may be seen in the foreground. Photograph by Dr. Ford A. Carpenter.

FARMER COOPERATORS

(Continued from Page 439.)

monopolies which are against public interest; and

Whereas, it has been clearly shown at the hearing of the sub-committee of the committee on the judiciary of the United States senate, held in Washington, D. C., June 2 to 20, 1921, that there is no foundation for the charge of possible monopoly on the part of the farmers;

Be it, therefore, resolved: That the farmers and fruit growers of California assembled in the state convention at Los Angeles this 24th day of October, in response to a call issued by State Director of Agriculture Hecke, do hereby endorse Bill H. R. 2373, now before congress, which was prepared for the express purpose of protecting the cooperative marketing associations from future malicious attacks and persecutions at the hands of unfair opponents, and that copies of this resolution be placed in the hands of the California delegation at Washington, D. C., the members of the committee on judiciary of the United States senate, the secretary of agriculture, and the representatives at Washington, D. C., of the various farmers national associations.

ANOTHER PARASITE OF BLACK SCALE

Following on the heels of the successful introduction by the state department of agriculture of the aphycus, the parasite of the black scale which has done such wonderful work in the control of this pest in Ventura and parts of Orange and Los Angeles Counties, the department has recently made another introduction of a new parasite not yet named which looks very promising. Harry S. Smith, chief of the pest control bureau of the department, who made the aphycus introduction, is now in Southern California superintending the work with the new parasite, which is being carried on at the laboratory at Whittier. This parasite, so far as laboratory observations have gone, seems to be more prolific than the aphycus and works on the smaller size scales. Just how it will adapt itself to California climatic conditions is of course not known, but it came from South Africa where climatic conditions are similar to California.

The state department has other new parasites with which it is experimenting at the present time. Two foreign collectors are maintained in the field, one in Australia and one in the Orient, searching particularly for parasites of the red scale.

Director Hecke is also negotiating with the United States department of agriculture with the object in mind of extending the foreign search for beneficial insects through joint expeditions with the federal department. Dr. L. O. Howard, chief of the U. S. bureau of entomology, has asked that Mr. Smith, the department specialist on this type of work, be sent to Washington for a conference having as its object the extension of the foreign parasite collecting work.

FUTURE OF DEHYDRATION

An enthusiastic dehydrator has suggested that dehydration will benefit everybody concerned. It will make a far bigger market for all kinds of farm and garden and orchard produce, with a fairer, more stable level of prices. It will tend to prevent the glutting of markets at certain seasons, which results in very low prices. It will enable the grower himself to dehydrate and preserve his surplus crops instead of leaving them to rot on the ground. At the same time, averaging summer and winter, it will mean a lower food cost to the consuming public, both through the equalization of prices and the vast saving in transportation. Dehydrated foods may be stored anywhere. They may be put in a dry attic or dry cellar. They may be kept in tin or glass or wood or cardboard containers. Because of their light weight and small bulk they can be stored in very much smaller space than canned foods and can be moved from one place to another without danger of breakage.

All of which is true and we believe the next few years will show a wonderful increase in this method of preserving and aiding in more economical transportation of some of our finest food products.

The Thread-Rubber trade-mark tells you that the plates in your battery are *insulated*—not merely *separated*. Willard Threaded Rubber Batteries are selected by the best brains in the automobile business as standard equipment for 187 makes of cars and trucks.

IT LASTS!

Don't go out and buy a battery by guesswork! Rather, fix your mind on this KEY-FACT and let nothing swerve you from it.

When you find the battery with the longest-lasting INSULATION you have found the longest-lasting BATTERY.

Long-lived insulation is the secret of the long life of Willard Threaded Rubber Batteries. Willard Threaded Rubber Insulation is durable. It resists wear. It lasts as long as the plates. It saves reinsulation expense.

Builders of 187 makes of cars and trucks pay more for Willard Threaded Rubber Batteries in order that your interests may be protected. When *you* buy a battery, why not follow their experienced judgment?

You can buy the Willard Threaded Rubber Battery of any of the dealers in your territory listed below. They all give authorized Willard Service:

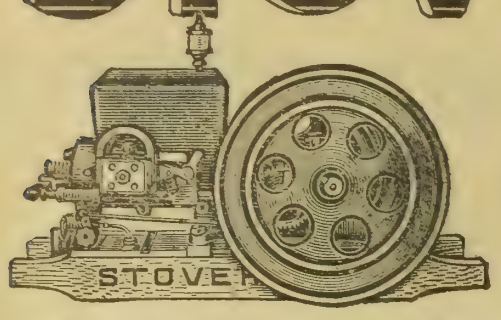
STOVER



STOVER'S Good Engine Type "K" the Engine with 16 Distinctive Features

Announcing a

1½ H. P. ENGINE With Watercooled Head

At a New Low Price

We announce here a new Stover Engine—the Type "K"—a 1½ H. P. Engine with a Watercooled Head—*at a new low price.* A new achievement. Write for catalog.

All wearing parts case-hardened—increasing length of service—minimizing replacements. Watercooled head prevents overheating—ensures long life for valve seats and stems.

This new Type "K" Stover—the engine with 16 distinctive features, is now added to our big line. See it! Only by *seeing* it can you appreciate its worth. See nearest Stover dealer today, or write us for descriptive literature.

STOVER MANUFACTURING & ENGINE CO.

Also Makers of Stover Samson Windmills, Feedmills, Comminuters, Ensilage Cutters, Pump Jacks, Working Heads, Wood Saw Frames and Hardware Specialties.

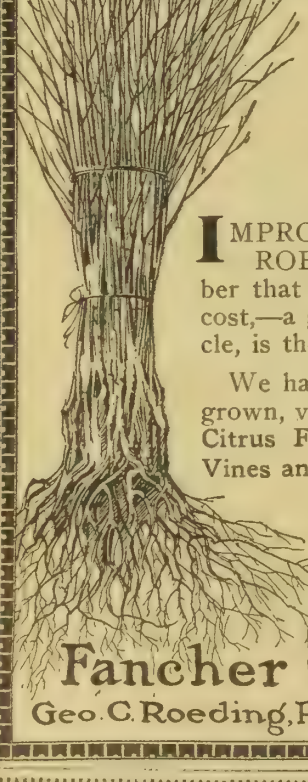
5191 LAKE STREET FREEPORT, ILLINOIS

DEALERS EVERYWHERE

SOME OUTSTANDING FEATURES

- Watercooled cylinder head.
- Drop-forged I-Beam connecting rod.
- Removable die-cast bearings in connecting rod.
- Long die-cast removable main frame bearings.
- Mixer with gasoline reservoir.
- Webster improved oscillating magneto.
- Positive speed changer.
- Oil cups eliminate hand oiling.
- Surplus horse power.

Roeding's True Trees



When anyone is looking for a ranch home almost the first question that arises is the nature of the improvements. A place with a good ORCHARD INCOME is certain to sell first.

IMPROVE your vacant land by planting ROEDING'S TRUE TREES. Remember that the cost of a tree is not the only cost,—a good tree, like any other good article, is the cheapest in the long run.

We have a magnificent stock of properly grown, vigorous, well rooted Deciduous and Citrus Fruit Bearing Trees, Ornamentals, Vines and Roses.

Let us have your name and address and we will mail you new price list when printed.

Fancher Creek Nurseries

When Writing Advertisers Mention California Cultivator

Persimmons

By G. W. Sherwood

THE persimmon is rapidly coming into favor as an orchard crop. The fact that it is an easily grown deciduous tree not more susceptible to frost damage than the walnut, makes it available for planting on lands too cold for the citrus fruits.

Persimmons have no scale pests or diseases that affect either the tree or the fruit, except that an occasional tree dies from a form of root trouble similar to that which affects the walnut and other deciduous trees, the exact cause of which is at present unknown.

The tree properly grown on the right stock is a thrifty grower and bears at an early age. Last, but not least, the fruit is very beautiful, sufficiently firm to ship to Eastern markets or to hold in cold storage and brings a high price on the market. The local market last year absorbed nearly all the supply at an average price of nine to ten cents per pound, packed loosely in lugs. The fruit held in storage for the holiday trade brought a much higher price.

The writer has been growing persimmons for nearly 25 years and is preparing this article with the view of giving prospective growers the results of his experience, with the understanding that it is mainly confined to a particular locality.

Varieties

The only variety, at present introduced from Japan, worth propagating is the Hachiya, the familiar acorn shaped fruit, deep red in color when ripe and nearly seedless. It is highly astringent when hard, which is of small moment, as the astringency completely disappears when the fruit becomes soft enough to eat.

The persimmon is picked when the pinkish color reaches the stem cap. At this stage it is sufficiently mature and can be handled without injury either for packing or storage. The consumer should buy while it is still hard and keep on a plate, stem down, until it resembles jelly. In this state it is one of the most handsome and delicious fruits that we have.

I have in bearing some ten varieties, including the Hyakume, Tane Nashi, Goshio, Tamopan and a delicious very small variety. None of these is commercially desirable, not only because the fruit is not as large or showy as that of the Hachiya, but because the trees are mostly dwarfed or even shrublike in growth. They are all later in ripening than the Hachiya, which is an added disadvantage.

The exception may be the Tamopan, which is the latest to ripen and grows a good sized tree. The fruit, while of excellent flavor, is ugly in appearance and hard to ripen. It also appears to be a shy bearer.

The Hachiya appears to be almost a perfect variety, and as its period can be extended by storage no other variety is needed. It is a regular and heavy bearer, but there is one fault. There is sometimes an excessive dropping of the fruit during the growing season. All persimmons blossom excessively and drop perhaps two-thirds of the set in the early stages of growth. This dropping continues during the summer to a greater or less extent, resulting sometimes in curtailing possible production, as during this present season; but usually the natural self thinning process on thrifty trees is carried out very judiciously and the trees retain all that they should.

I have tried in every way I could think of to correct or minimize this fault, without any success. Like the "June drop" of oranges, it appears to be chargeable to the weather conditions.

There are several strains of the Hachiya, and care should be taken to propagate only from trees bearing fruit of the best character.

Soil and Climate

The persimmon will do well on any soil suitable for walnuts, and probably on any good orange land. The most thrifty trees are on very heavy land, verging to adobe. My trees are largely interset between grapefruit 24 feet apart and receive the same care as the citrus. The irrigation required is the same as for oranges except that at the ripening period they should receive an excess. The fruit grows very rapidly during the last month and plenty of moisture should be given.

The persimmon, being deciduous, can be planted on lands too cold for citrus, but what degree of cold they will endure without injury has not been definitely determined. It is no doubt safe to follow the walnut.

One of the prime requisites is to choose a sheltered location, as the trees are intolerant of wind and being very brittle are likely to be wrecked in a windstorm when heavy with fruit. My practice is when the trees are six or eight years old to wire the main branches to a 2 by 3 set upright in the tree, protecting the limbs where the wire encircles them with a piece of old hose or leather. Temporary props are required in addition.

Rootstock and Propagation

The greater part of the trees now growing here were imported from Japan. They came in the shape of whiplike plants two to four feet long with very poor roots, having few or no fibrous branches. Many died or did not grow, and all were hard to get started. To get 50 per cent to grow was a good showing, and very likely many of these would be off varieties. The importation of trees has now been forbidden to prevent the introduction of diseases and we shall in future have to depend on native grown trees. The rootstock now most favored is from the seeds of the diospyros lotus, which are obtained from Manchuria, a province of China. These produce plants with abundant fibrous roots, which grow with marvelous rapidity. I am now budding plants the seeds of which were received in March of the present year and which are 18 inches or more in height and caliper one-fourth inch. The seed is very small, resembling in size and appearance that of the Pasadena watermelon. Each pound should produce about 1,500 plants. Trees on this stock have borne a good crop at three years. Other stocks may be quite as good, however, except from the nurseryman's point of view. I have excellent trees on other stocks and some of my best trees are on the native Eastern stock.

Propagation is mostly by grafting, as the plants are not usually large enough to bud in September when this work must be done, but acquire sufficient growth to permit grafting in the spring.

Care of Trees

The nursery trees are set out like other deciduous trees, 22 feet apart is sufficient. The young trees should have the trunk shaded loosely or wrapped with newspaper. Mulching is desirable, but hoeing after each irrigation is perhaps better. It is my practice, as with all young deciduous trees, to cut back excessive growth twice during the season to a point where the limb should branch. This throws the growth into the trunk of the trees for a time and prevents useless growth that must be cut off anyhow. The persimmon tends to a sprawling, spindling growth, and this propensity must be vigorously combated if a strong tree is to be grown.

Marketing

It is very desirable that some sort of marketing agency be formed to take care of small lots of fruit and to establish standards of packing and grading. One of the purposes of this article is to suggest the desirability of forming a persimmon association on the lines of that of the avocado growers.

HOW TO MAKE AND USE A RAIN GAUGE

(Continued from Page 441.)

which is afterwards poured into the measuring tube and measured with the stick.

Planting the Rain Gauge

The rain gauge should be located on the ground (or on top of a fence post) in a place uninfluenced by either trees or buildings. Do not place the rain

gauge in the mouth of a canyon or on the lee of a moutain or your rainfall measurements will not be dependable. If a location on the ground is selected it is best to dig a hole deep enough to hold the gauge securely and put rocks about it to keep it from tipping over in a storm. In a snowy country it is necessary to have the gauge brought in during times of freezing weather. Snow is measured by using the funnel to collect samples of freshly fallen snow and slowly melting it and afterwards measuring and recording it as rainfall, remembering that the technical and accepted name for rain and melted snow is precipitation.

Recording Rainfall

Rainfall or precipitation entries should be made at a regular hour, preferably in the morning, thus showing the amount falling in the preceding 24 hours. It is best to rule a daily sheet into columns showing the following items: Date; Rain or Snow; Beginning; Ending; Amount; Accumulated, Month, Season, Last Season. The owner of a rain gauge will confer a benefit upon his community if he will furnish rainfall data to the local paper. While the weather bureau is glad to have the data it is not always possible to publish it or to designate the location as a cooperative station.

A word of caution: Do not be misled into using cans, buckets or other inaccurate receptacles to measure rainfall. Neither purchase from dealers rain gauges which have a receiving surface less than 8 inches in diameter. Rain gauges are often made larger than 8 inches, but with no improvement in accuracy; if rain gauges are less than 8 inches in diameter the results are not dependable. At the beginning of the rainy season test the rain gauge. See that the rain gauge does not leak and that it is located in a position where it can not be tampered with.

ARSENATE OF CALCIUM

Tests have been made by the United States department of agriculture on the effects of arsenate of calcium in combination with lime-sulphur. The arsenate of calcium was used at the rate of two pounds to each 50 gallons of water. In all the experiments the arsenate of calcium gave very satisfactory results in killing the larvae without burning the foliage. In a number of cases its killing action was somewhat slow. Since it can be produced cheaply it would appear to have distinct value, although it has not been sufficiently tested to permit recommending it unreservedly for general use. Where arsenate of calcium was combined with lime-sulphur it was, as a rule, even more effective as a poisoning agent than when used alone and did not lessen the value of the latter as a fungicide. When these compounds are combined the amount of foliage consumed by the larvae is less than where the arsenate of calcium is used alone. In tests in 1914 a commercial arsenate of calcium (paste), arsenate oxide 18.82 per cent, with lime-sulphur solution gave very excellent control of the codling moth. Where arsenate of calcium was used 98.79 per cent of the apples were sound.

REPLACING PEACH TREES

Replying to a query in a recent Cultivator as to replacing trees in a bearing peach orchard, Thomas M. Wells of Fresno calls attention to his experience with replanting in old orchards. He pulls out old stumps with tractors, then digs holes some two and a half feet square, puts in a blast, then plants the new tree, filling in around the roots with top soil. The young trees which he is setting are largely Santa Rosa and Climax plums which have made a growth of five feet the first season. As to his methods of blasting and work Mr. Wells continues:

"First I pull the stumps out to get as much of the roots as possible, which are more or less diseased. Use a one inch auger to bore a hole into the hardpan two-thirds through it, then use one-half stick or one-fourth pound of dynamite. Tamp it in solid and light. Next dig hole two and one-half feet around in order to get the roots all away from the young trees to be planted and do not allow any dirt that has been taken out to fall back in. Fill with top dirt from middle of row. I have never tried powder to blow out stumps as the tractor does it much cheaper. The best time or season is in the winter after the ground is thoroughly soaked with rain. I never observed any injurious effects from doing this in wet weather. My land is a very heavy red soil, what we call hardpan, although in some places there is six feet to it.

"PACKERS DECREE"

By R. G. Spencer

As a matter of justice we ask an opportunity to briefly present a few reasons why we believe the so-called "Packers Consent Decree" should be modified to permit the five Chicago packing companies to resume the distribution of such products as our California fruits. The California Cooperative Canneries are not alone in the protest against the operations of this decree. The National Canner, official organ of the National Canners Association, the Western Canners Association, and many of the leading fruit and vegetable canners of the East and Middle West have expressed themselves officially and by letters protesting against the decree and asking its modification. The National Livestock Association, Eastern consumers and producers organizations, labor unions and many individuals have been filing their protests on the matter, objecting to this decree method of eliminating a useful institution from the service of the country.

We contend that it is not the private interests of any one corporation, association or group of organizations, whether commercial in character or cooperative, that should be considered but the broader interests of the entire nation. We believe that the greatest economic problem we have to solve is that of efficient distribution of our food products at lowest possible costs. We do not believe that the limitation of this distribution to one set of interests such as the National Wholesale Grocers Association is the way to bring about such efficiency of lower cost. We believe that the methods of distribution of the packers in connection with the marketing of their meats, meat products, butter, eggs, etc., was the best and most efficient system yet devised, and that such a system should not be destroyed but allowed to operate under proper public control to insure its use for the benefit of all the people.

CANNING CIDER

Sweet cider may be canned so as to keep its natural flavor and aroma indefinitely by a method worked out at the horticultural products laboratory of the Oregon agricultural college experiment station. The cooked jelly taste is entirely absent.

The apples are collected, sorted to all sound ones, and then cleaned and piled up to sweat, which develops an exquisite aroma in the skins. The sound fruits only are then ground up with a grater. Spoiled fruits spoil the flavor and render the juice watery.

With hydraulic presses an average of three gallons from each bushel of fruit is obtained. The juice is pumped direct from the press into a receiving tank and strained through a coarse cloth or burlap to remove pulp. It is then run through a centrifuge of the type used in clarifying milk.

Attention Farmers---Bredall Improved Beardless Barley

We are offering for the first time direct to the farmer our celebrated barley which has out-yielded anything we have tried so far along with it in our acre test plots. We also have Mariout and Beldi barley. Dart Imperial Bunch, and Early Board wheats. Seeds.

WHY NOT!—Grow more per acre? Be free from beards? Raise a better grain hay? And last but not least buy direct from grower?

We are supplying several Asiatic and European Governments with our Beardless barley, who are now introducing it in their countries

Write for information and prices to

ANKER A. BREDALL, Box 4, Solvang, Cal.

Correspondence with the advertisers in the California Cultivator will convince you that their articles will save you money.

The juice is then put into the sterilizer, which may be a black tin or copper coil in a tank of water which is to be held at an even temperature of 160, Fahrenheit. Good thermometers and careful watching are essential.

The product next goes into sterilized plain tins which are sealed at once and processed at 160 degrees—no more—for 30 minutes or more. Time is counted after tank thermometer records 160, which must not be exceeded. After a short period of cooling, the cans are ready for market or storage.

If sterilizing the juice causes too much air in it, the cans are run through an exhaust box at 160 for about five minutes.

Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Keeping Cider Sweet

Can you give me a recipe for keeping cider fresh?

My father used to put ground mustard seed and other ingredients in a barrel of cider and it would keep fresh indefinitely but I do not know the proportions and what else he put in it.—Suscriber, Kenwood.

The best way of preserving cider is to pasteurize and bottle. Full instructions in this procedure are given in the columns of the California Cultivator of August 20, 1921, page 173 in an article written by Prof. W. V. Cruess. If, however, it is necessary to preserve in barrel, the barrel must be thoroughly cleansed and sterilized and the cider filtered through charcoal to remove any pulp or impurities which induce fermentation. You may then use ground mustard, ½ pound; salt, 2 ounces; pulverized chalk, 2 ounces. Mix with small quantity of cider, pour into the barrel and mix thoroughly by rolling or rocking the barrel.

Another preservative recommended is calcium sulphide ¼ ounce to every gallon of the cider. As in the preceding case sterilization and filtration are necessary.

Threshing Clover

I have 20 acres of clover seed. Can you tell me how to get the seed threshed ready for market? Where can I find sale for it?—Subscriber, Angiola.

The only suggestion we would have would be to get in touch with one in your own community who has a clover huller.

Riddance to the Ants

We have a home acre infested by ants, rather small ones and dark colored. Can you tell me how to get rid of them? Wherever we irrigate there is an ant's nest. They have killed bulbs and other plants and flowers, so I cannot raise hardly anything. Fruit trees do not seem to be hurt by them. They will run up the limbs of the tree, a thick mass of them sometimes as wide as a person's hand. In the path I can pour kerosene on the nest and set it on fire. That gets them but have to use ant paste or powder in the house all the time nearly.—Subscriber, Ceres.

This seems to be an exceptional year for pests of Argentine ants and all other varieties. Your procedure in the matter of burning kerosene is good. More deadly, however, is cyanide of sodium in solution poured down the hills. If this is persisted in all over the place and say a tablespoon of the strong solution, at least 10 per cent, poured into the entrance of the hole, it will be but a short time before the pest in controlled or perhaps eradicated. Boiling water or gasoline are good if used in this way. There are also ant poisons sold at drug stores both in the form of pastes and of syrups. An excellent control is formula 23 in the Cultivator pest fighting special of September 24, page 314. It must be borne in mind that these solutions, especially the cyanide referred to above, are deadly to humans as well as to ants.

Sugar Beets Dying

Scattered through my beet field this year are patches where the beets have dried and rotted. Had a good stand to start with. They did not begin to die until sometime in July. It is not from lack of cultivation or water. If this is a soil condition or disease what would be a good crop to follow up the beets? Most of the land is light loam. A few spots have some alkali.—Subscriber, Compton.

This may be nematodes or it is barely possible it may be a fungus, Sclerotinia. If the latter, it will be indicated by a slimy, offensive rot. We think it would be well to mail some of the dying beets which will be submitted to experts.

Keeping Cider Sweet

Is there any method by which cider or apple juice may be kept sweet other than by heating?—Subscriber, Arroyo Grande.

See answer to similar query on this page.

Farm Loan

I would like to get full information concerning the farm loan bill. I desire to get loan if possible.—Subscriber, Monrovia.

You should get in touch with the local farm loan association. There are several in Southern California. One has offices in the Bradbury Building, Los Angeles. Write E. S. Gardner, Secretary, 304 S. Broadway, Los Angeles.

Awards of Poultry

A subscriber has written stating we made error in the list of winnings in the Dark Cornish exhibited at the San Fernando fair, but as we did not print the awards at that fair we think subscriber read instead awards at the California state fair. These awards were printed on the same page with the account of the San Fernando fair. However, as the inquirer did not give correct address our letter of explanation has been returned to us.

Young Prune Orchard

I have a small orchard of young prune trees which have had a considerable setback as a result of the unseasonable weather in the spring. Many of the trees are weak and unhealthy. The soil is gravelly and the orchard is about four years old. Economy being

strictly a consideration what treatment would best help the situation?—Subscriber, Ukiah.

We fear these trees may have received a setback which may prevent the orchard ever being put into best commercial producing condition. In any case it would be a matter of slow upbuilding rather than any one treatment. The matter was referred to Mr. Howard who writes: "The probable cause of the setback is not stated, and as the cause should be the first consideration in determining the best care for the trees to promote rapid recovery, it is difficult to make a recommendation. If the trees have made a good growth for their age up to the time the setback, whatever its nature, occurred, there is a possible chance of saving them, if no disease is present. Would suggest calling in your horticultural commissioner or farm adviser to examine the trees with particular reference to the roots and if no disease is found plan for the best possible care this year with the addition of barnyard manure or other fertilizers. If the trees have always lacked vigor and have apparently reached the point where they fail to do well the greatest economy would be to remove the orchard and try something else."

Corn Husks for Tamales

A subscriber wishes information as to securing supply of corn husks for making tamales. California husks have been largely used in the manufacture of tamales. The question was referred to the Sperry Flour Company and we have from George R. McLeod the following:

"A large proportion of the corn husks used by tamale manufacturers of California is produced in California. It would be hard to arrive at the total amount used for the reason that a large proportion of husks is distributed direct from the producer to the consumer. Medium sized tamale factories in such towns as Stockton and Sacramento use practically five tons of tamale husks a year. The best husks are taken off yellow corn as they are stronger in texture than the husks from the white corn and command a slightly higher price from the tamale people. People who make a business of curing and baling corn husks for sale generally try to secure a crop of corn that matures early so that the husks dry and bleach out well and are not damaged. The husks of corn that matures later in the season would be apt to be damaged or discolored by mildew. Care is also taken to secure husks entirely free from damage by cut-worms which completely destroy the value of the husk. The corn is generally picked from the stalks and let dry in the sun until husks reach a moisture content low enough to keep. The husks are then removed and baled in a primitive baling machine, each bale weighing from 75 to 100 pounds. The price on last year's corn husks, which have been carried over, varies from 10 to 18 cents a pound. There is no new crop of corn husks on the market out of the 1921 crop. It has been the custom in California for many years, particularly on the Merced river, and at some other points, to give the husks to husking contractors in payment for the picking, husking and putting of the corn in the cribs."

Cure for Garget

Please permit me to answer the Ferndale subscriber as to a cure for garget in a cow's udder. As soon as swelling and inflammation is noticed give her a teaspoon of fluid extract of poke root. Keep this up three days running, and then follow up the fourth day with a pound of Epsom salts, both given as a drench in luke-warm water. —Santa Ana Subscriber.

Veterinary

Answers in this column by Dr. Wm Petrie, 2714 South Harvard Blvd., Los Angeles, are without charge. For immediate mail answer remit $1.00. In writing questions give full symptoms or particulars of injury of animal.

An Extreme Case

I have a large horse that was in fine condition but about three or four months ago his hind legs began to swell and gradually grew worse, then the front legs began to swell also. Now there are lumps from the size of the end of one's thumb to the size of a hen's egg on the neck, body and legs and the head is swollen so the shape of the halter shows where the pressure comes. The skin is cracking in the hock and above the ankles. The inside of the nostrils is very much inflamed. I had a veterinarian examine him and he said his blood was bad and gave him some medicine, but it did him no good. I also gave him iodide of potash in teaspoon doses twice a day with no results. He is gradually growing worse and sometimes cramps when stepping over a doorsill and has trouble getting his hind leg down again. Several horses have been destroyed for glanders in our neighborhood but the same veterinarian who condemned them treated mine and says this is not glanders. What is it and what can be done for him?—Subscriber, Hughson.

We should surely think it was glanders if your veterination had not examined him and said it was not. Sometimes when the virus is scattered all through the system they refuse to react when tested and confuse a veterinarian. Better let him test the horse again. If you wish to treat the horse get one ounce of aloin, four ounces of turpentine and enough raw linseed oil to make three pints. Mix it well and divide into four doses. Give one dose every three days while it lasts unless it physics him very strong, then make the doses smaller or farther apart. Also give a teaspoon of crushed saltpeter in the feed twice a day for ten days. Change the feed and give some carrots. Give a little green feed as long as you can get it.

Sheep Ailing

I have a year old Romney Marsh ewe that has been ailing for two months. For some time it could not stand up but for a week can walk a short distance, then gets weak and sits down. Has had range feed and alfalfa hay and some bran, oats and a little oil cake mixed. It is regaining its appetite but is humped up in the back with the hind legs stiff and drawn under the body. Also a number of lambs died on the range. Their lungs were spotted or the liver seemed rotten or both. They appeared healthy and had a good growth of wool. I have seen such cases in wet countries where the sheep were exposed to cold rains and without shelter but these have never seen wet weather. Please advise what to do for them.—Subscriber, Hopland.

The trouble you are having with your sheep may be common but I must confess I am not familiar with it. It sounds like poison of some kind and may be a weed that they got on the range or possibly in the hay. There are several poison plants in California that grow near wet places. You can get a good description of them and their antidotes from Bulletin 249 of the college of agriculture, Berkeley. It is free. A laxative will often relieve if given in time. Use a teacup of raw linseed oil and a tablespoon of turpentine. Give it at one dose. The antidote for most of the poison weeds is five to ten grains of permanganate of potash with an equal amount of the sulphate of aluminum dissolved in a pint of water. Try the turpentine and oil with a little aloes mixed in it for the year old sheep.

Rheumatism of the Joints

I have a cow four months with calf the second time. For two months she has not been eating as she should and has been falling off in her milk. She gets all the alfalfa she wants and plenty of good clean water. She does not look poor but is getting stiff. She has difficulty in getting up and can hardly walk. We have another heifer calf that is getting the same way. What can we do for them?—Subscriber, Modesto.

There must be moisture about the stable or in the yard where they are kept. You must provide dry quarters for them. Keep them in the sunshine during the day and keep them dry and warm during the night even if you have to blanket them. Get your drug-

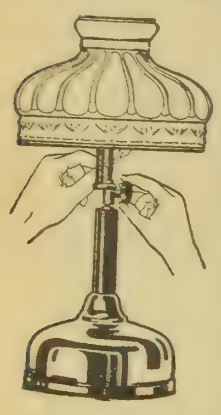
Wonderful Home Light

New Gasoline Lamp Gives 300 Candle Power Brilliance at Low Cost

A gasoline lamp that gives more light than 20 old style oil lamps at about one-tenth the cost is the leading product of the Coleman Lamp Co., Wichita, Kans.

This remarkable lamp is known as the Quick-Lite. It generates its own gas from common motor gasoline and is so simple in construction that even a child can operate it.



The Coleman "Quick-Lite" is safe, dependable and economical. Unlike other gasoline lamps, the Quick-Lite lights with ordinary matches. Nearly a million are in use in American homes. Thousands more are used to light stores, halls, churches, etc. The Quick-Lite is gaining wide favor in cities, too. Many claim it is superior to electricity because the light is soft and restful to the eyes.

The above picture shows one of several models. More than 30,000 dealers sell "Quick-Lites." Any one interested in better light may see this lamp lighted at a nearby hardware or general store. Full information together with an interesting booklet may be had free by addressing the Coleman Lamp Co., Desk A-4, Wichita, Kansas.

THE SAILOR'S LASS

I set a lighted candle to call my sailor home.
Afar upon the high seas my storm-tossed thoughts still roam;
Perhaps he hears my heart call above the ocean roar;
Oh change your course, my sailor lad, come back to port once more!.

I set a lighted candle to call my sailor home.
Oh would I were a seagull to drift across the foam—
The white wake of his vessel, perchance I'd hover o'er—
Oh change your course, my sailor lad, come back to port once more!

I set a lighted candle to call my sailor home.
Be still, my heart, and listen—perchance you'll hear him come!
What is it that the waves bring, awash upon the shore?
Oh change your course, my sailor lad, come back to port once more!

I set a lighted candle to call my sailor home.
'Twas I who planned to greet him when he set his sail to come.
Why should he drop his anchor near that uncharted shore?
Oh change your course, my sailor lad, come back to port once more!

—Eleanor Elliott.

HINTS FROM HOUSEKEEPERS

More Jerky Recipes

Jerky Gravy.—1 cup finely ground or pounded jerky. Put in frying pan with 2 heaping tablespoons lard, stirring until brown. Add 2 tablespoons flour, brown slightly and add enough water or milk to make a thick gravy. Season with salt and pepper. This is delicious served with boiled potatoes.

Jerky and Beans.—Cook a pint of pink beans one hour and add 1 red pepper and 1 onion sliced and a small piece of garlic, several strips of jerky and a piece of bacon. Keep covered with water. Cook till juice is thick, and salt.

Jerky Stew.—Peel and slice five or six potatoes into a kettle with enough boiling water to cover. Add a green pepper and 2 onions and a small piece of garlic. Season with salt and pepper. Add to this 1 cup ground or pounded jerky and a strip of salt pork or fat bacon cut in small pieces, or a heaping tablespoon lard. This may be thickened with a little flour if desired.—Subscriber, Oakdale.

Jerky on Toast.—Soak jerky in cold water until soft enough to put through the meat grinder. Make milk gravy, using butter, milk and flour. When about done add the ground jerky. Serve either plain or on toast. You will find this delicious.—Subscriber, Wasco.

With Gravy and Onions—I have had the use of jerky in season for a number of years. Besides eating in the dried state, which so many like to do, it is good cooked. Either pound or cut in very small bits, put into butter or other fat, fry and stir till as brown as it will stand without burning, put in a little flour, cook and stir a few moments, then add milk. There should be flour and fat enough to make enough gravy to cover jerky.

Another way I prefer is to slice fine a good sized onion to several handsful of jerky after it is prepared for cooking, then cook together in butter till onion is done. It is best to cook onion a little first, afterwards proceed with gravy as above. Chili pepper is good if one likes it added.—Manzanar.

Good Tamales

I think your correspondent will find following tamale recipe very much superior to those you gave her:

Chop ends of husks, wash thoroughly, soak in clean water at least one hour, two is better. I grind my own corn, but if one cannot do that, take about 3 cups finest ground package hominy to 5 cups corn meal. Take 1 pound lean beef—I prefer neck meat—1 pound fresh pork free from bones, cover with 4 quarts cold water, add 5 to 8 cloves of garlic (depending on size), 2 onions, salt to taste. Bring slowly to boil, boil till perfectly tender. Strain meat from broth and chop to paste. Heat ½ pound fine ground suet in large iron frying pan till particles are all clear, add about 3 cloves garlic and 1 onion minced fine. When turning yellow, not brown, add meat and fry about five to ten minutes, adding slowly 4 or 5 tablespoons chili powder. If wanted very hot about ½ tablespoon cayenne also, or one can grind peppers and add with onion and garlic when starting to fry. One chili pepper, 1 bell and 3 pimientos, all red, makes a good combination. Add 1 cup broth, salt to taste and let simmer while preparing dough.

Pour your 8 cups meal into remainder broth. If too thick, thin with water or more broth. It should be thick enough so spoon will stand up in it. Add salt to taste, ½ pound fine ground suet and two or more tablespoons chili powder. If you use ground peppers they should be fried till tender but not colored in a little suet before adding to broth. Cook at least ten minutes.

Take corn husks, wipe dry, make layer of dough about ⅛ inch thick. In center put about 1½ tablespoons prepared meat, 1 olive and 2 Muscat raisins and roll, tie ends with husks torn in strips. Put in steamer and steam at least four hours. If left 24 hours after steaming and then steamed another hour they are still better, and if you don't think they are the best you ever tasted my labor in writing this is all wasted. If one wishes, can add strained tomato to broth.—M. F. Marsh, Monrovia.

HOUSEHOLD QUERIES

Making Dry Yeast Cakes

I am one of the readers of your paper and like it very much, especially the household department. I would appreciate it very much if you would send me a recipe for making dry yeast cake. Also, I have been wishing to see some good soup recipes, as it is getting almost winter.

A number of recipes for dry yeast cakes were given in the Cultivator last spring. Here is one sent in by Mrs. Carl Muller, Reedley:

To get a starter I boil one medium sized potato. Mash fine. Mix in enough corn meal to make stiff batter, then when cool, not cold, mix large spoonful of bread batter in and let rise, then knead in enough corn meal to make a stiff dough and let rise again. Now I form little patties like small biscuits, place on a plate or platter and dry in airy place. These may be kept in any dry place. I would advise making not more than 6 to 10 at one time.

Almond Paste

I would like to know if any of our subscribers know how to make almond paste used in cooking, that will keep.—Subscriber, Corning.

Have our readers any help to give this inquirer? The only suggestion we can make is to grind the almonds into meal, using the pulverizer knife in the ordinary food chopper. Almonds, of course, do not contain as much oil as peanuts which when ground in this way make nut butter. We think it would be quite practicable to grind small quantities as needed. This meal may then be used in cake, confections, bread, vegetarian dishes, etc.

Sweet Pickle Recipe

Can you send me a recipe for sweet pickle like those you buy from the store? I will be very grateful to get one as I have tried many but none taste like those.—Subscriber, Elk Grove.

For recipes in answer to this and other similar requests the Cultivator will be glad to extend subscription credit, that is, for all which space allows us to publish. Those received first have best chance of being published.

Spanish Rice, etc.

I would like to obtain recipes for cooking rice in different ways, such as Spanish and so on.—Subscriber, Artois.

Spanish Rice.—3 medium sized onions, ½ cup drippings, ½ cup uncooked rice, 3 cups fresh or canned

3783. Girl's Dress.—Cut in 5 sizes: 2, 4, 6, 8 and 10 years. A 6 year size requires 3 yards of 36 inch material. Price 10 cents.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH

HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cents) stamps for each number. In order to furnish our readers with the very best NEW YORK styles, all patterns ordered are filled in NEW YORK. Do not expect patterns under **Two Weeks** from date of order.

CATALOGUE NOTICE

Send 15c in silver or stamps for our Up To Date Fall and Winter 1921 Catalogue, containing over 500 designs of Ladies', Misses' and Children's Patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating 30 of the various simple stitches) all valuable to the home dressmaker.

PATTERN DEPARTMENT
California Cultivator **Los Angeles**

tomatoes, 3 green peppers cut into strips, 2 teaspoons salt. Slice onions and cook till tender and slightly brown in melted fat. Remove from fat, add rice which has been carefully washed and dried, and brown it. Then add cooked onions, the tomatoes, green peppers and salt, turn mixture into baking dish and bake until rice and peppers are tender. This will serve 6 or 8.

Another.—One cup well washed rice cooked soft, about half an hour, in kettle containing 2 cups water and 2 cups strained cooked tomatoes seasoned with salt, cayenne and 2 tablespoons finely minced onions, or clove of garlic, and 2 ounces finely cut or grated cheese. Shake to prevent sticking to bottom of pan. Continue boiling till soft. Set in hot water till served.

Other rice recipes will be given as space permits.

Cake Frostings

I would like to have recipes for cake frostings, not too rich.—Subscriber, Artois.

Here is a chance for our subscribers to pass on their favorite frosting recipes. Subscription credit will be given for those used in this department.

Marshmallow Cookies

Could someone give me a recipe for marshmallow cookies like those the bakers make? They have a marshmallow filling or frosting and the cooky itself is spongy like a marshmallow.—Subscriber, Oakdale.

"It Takes a Lot o' Livin'"

Can you tell me who is the author of "It Takes a Lot o' Livin' in a House to Make It Home," and please print it in the household department.—Subscriber.

HOME

By Edgar A. Guest

It takes a heap o' livin' in a house t' make it home,
A heap o' sun an' shadder, an' ye sometimes have t' roam
Afore ye really 'preciate the tings ye lef' behind,
An' hunger fer 'em somehow, with 'em allus on yer mind.
It don't make any difference how rich ye get t' be,
How much yer chairs an' tables cost, how great yer luxury;
It ain't home t' ye, though it be the palace of a king,
Until somehow yer soul is sort o' wrapped 'round everything.

Home ain't a place that gold can buy or get up in a minute;
Afore it's home there's got t' be a heap o' livin' in it;
Within the walls there's got t' be some babies born, and then
Right there ye've got t' bring 'tm up t' women good, an' men;
An' gradjerly, as time goes on, ye find ye wouldn't part
With anything they ever used—they've grown into yer heart:
The old high chairs, the playthings, too, the little things they wore
Ye hoard; an' if ye could ye'd keep the thumb marks on the door.

Ye've got t' weep t' make it home, ye've got to sit an' sigh,
An' watch beside a loved one's bed, and know that Death is nigh;
An' in the stillness o' the night' see Death's angel come,
An' close the eyes o' her that smiles, an' leave her sweet voice dumb.
Fer these are scenes that grip the heart, an' when yer tears are dried,
Ye find the home is dearer than it was, an' sanctified;
An' tuggin' at ye always are the pleasant memories
O' her that was an' is no more—ye can't escape from these.

Ye've got t' sing an' dance fer years, ye've got t' romp an' play,
An' learn t' love the things ye have by usin' 'em each day;
Even the roses 'round the porch must blossom year by year
Afore they 'come a part o' ye, suggestin' someone dear
Who used t' love 'em long ago, an' trained 'em jes' t' run
The way they do, so's they would get the early mornin' sun;
Ye've got t' love each brick an' stone, from cellar up t' dome:
It takes a heap o' livin' in a house t' make it home.—Edgar A. Guest.

Prune Bread

Would some of the ladies who have contributed such excellent recipes in the past few months kindly send in, through the pages of this fine farm paper, just how to make prune bread? Our town baker makes fine, but I can't get the recipe. The prune recipes recently sent were fine. I enjoy the household department a great deal and always read it first. I keep all of our papers.—Subscriber, Chico.

Here is the recipe vouched for by the California Prune and Apricot Growers. The Cultivator will also be glad to receive from readers other recipes which they have found good:

One cup scalded milk, 1 tablespoon melted shortening, 2 tablespoons sugar, 1 teaspoon salt, ½ cake yeast dissolved in ¼ cup lukewarm water, between 3 and 3½ cups flour and 1 cup cooked Sunsweet prunes drained and cut in quarters. Put shortening, sugar and salt in hot milk, let stand until lukewarm, then add dissolved yeast. Add flour gradually, beating well until too stiff to stir. Turn on molding board and knead in remaining flour until mixture is smooth. Place in well greased bowl, brush dough over with melted shortening, cover and allow to rise in a warm place to twice its original bulk, then turn on board, add prunes, knead and shape into loaves. Place in greased pans, having them about half full. Brush over loaves with melted shortening, let rise again and bake in a hot oven about 45 minutes for a medium sized loaf.

Dates

For what are the following dates noted in history: 684, 757, 813, 981, 1453?—Subscriber, Merced.

680-681—Council of Constantinople (sixth general council).

756—Foundation of the Ommeyade Kingdom (afterward caliphate) of Cordova by Abderrahman.

813—The Bulgarian Khan Krumm menaces Constantinople. Accession of the Caliph Al-Mamoun.

981-982—War of Otho II against the Saracens and Greeks in South Italy. His army was finally overthrown.

1453—Constantinople taken by the Turks.

MANICURING BUTTONS

Don't get discouraged when your expensive pearl buttons lose their luster. Just a little labor will brighten them up as good as new. Soak the buttons in olive oil or a good quality of machine oil. When you take them out rub them hard with powdered pumice, talcum powder, or a good nail polish. The nail polish should always be used to finish them up with, and they will shine like well manicured nails. Cut jet buttons should be scrubbed with a toothbrush and good soapsuds, and steel and other buttons are often improved by this method. It is too much work for the busy housewife on the farm to remove pearl buttons from skirts or other garments when washed, and they are bound to lose their luster eventually, but a little manicuring will renew them completely.

ONE TOO MANY

A winsome little Miss of five years who had made her first visit to a Sunday school was greatly impressed with the things the teacher of the kindergarten class told the pupils.

The child was told that God is everywhere—that no matter where she went He was with her and watching her; so that she must be a very good little girls.

The next day the little lady was walking on Washington Avenue, where she lives with her parents, when she looked around and saw her little black kitten trotting along behind her.

"Kitty," she said angrily, stamping her tiny foot, "you go right back home. It's bad enough to have God tagging along with me all the time I don't need you."

YOUTH, THE RADICAL

Admiral Sims said at a dinner party in New York:

"Youth is always an extremist. Take, for instance, the battleship question. We middle-aged sailors are just now asking ourselves exactly how much the submarine has impaired the value of the battleship, but youth has got the question settled for good and all.

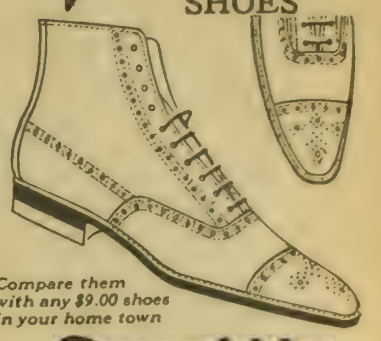
"'What is the value of the battleship today?' I said to a naval cadet, at a luncheon.

"'No value at all,' he answered.

"Then he thought a moment and added:

"'Of course, she's got a very nice deck for dancing.'"—Detroit Free Press.

$4.68 On Arrival for these Genuine WERNER SHOES



Compare them with any $9.00 shoes in your home town

Send No Money

Simply fill out and mail the coupon at the bottom of this ad. We will deliver the shoes immediately. When you receive them hand $4.68 to the postman. That's all. He will forward the money to us. Try the shoes on, compare them with any $9.00 shoes in your town. If you are not satisfied in every way—with the fit, the style, the workmanship, the finish, the material, return them to us, at our expense. First Prize Calf Herd, 1921 California State Fair

60 REAL FOUNDATION HEREFORDS
AT PUBLIC AUCTION

FROM

Nevada Hereford Ranch, Wells, Nev.

Owned by J. H. Cazier & Sons Co.

SELLING AT

State Fair Grounds, Sacramento, Cal.

Tuesday, November 1, at 10 a.m.

In the quality of its cattle; the ability and constructive policies of its owners; the unexcelled history of good health; and all around excellence as a real breeding herd, this herd ranks among the foremost collections of Herefords in America.

Cattle from this herd have invariably done well for new owners in California, and the present offering will consist of approximately 55 females and 5 bulls, mostly carrying the Harris Standard 2nd—Beau Blanchard 76th cross that has been the outstanding feature of our Hereford shows the past two years.

This then is an opportunity to buy Herefords of real foundation quality in every sense of the word, at a time when the breeding of these cattle offers one of the most attractive futures in agriculture.

THIS IS A FEDERAL ACCREDITED HERD

LIBERAL TERMS OF SALE: Responsible parties may make arrangements before sale, with the sale managers, for credit on the basis of one-half cash, balance in six months with approved note bearing eight per cent interest.

SWINE AT THE SOUTHERN CALIFORNIA FAIR

Hampshires

Riverside has always been known for the number and quality of Hampshires shown as there are a number of big Hampshire herds in that vicinity. This year herds from that other Hampshire hotbed, Ventura and Santa Barbara Counties, came out for blood, and most of the ribbons went to these latter men.

A. V. Buell of Carpinteria won both grand championships but his old sow, Floreine 2nd, was beaten for the honors by her littermate, Floreine 4th. Buell won the aged and young herds and get of sire and produce of dam. James Marwick of Santa Barbara won both junior championships and breeder's young herd. In the litter contest the Fairbanks Ranch of Redlands was first.

This was the strongest Hampshire show ever held in California and many hogs that would have been winners in times past were not in the money.

Polands

The feature of the Poland show was the grand champion boar, Navy Boy, shown by Gatewood and Stevens of Fresno. The judge was candid enough to remark that this boar could have been the big noise at the National Swine Show this year. He has been unbeaten in California and the Poland men of this state are not far behind the Middle West if the reports of the judges and spectators are to be taken seriously. Practically all of the other ribbons went to Buckland and McNeil of Fresno, who have a fine well balanced herd out this year.

Exhibitors: Buckland & McNeil, Fresno; Gatewood & Stevens, Fresno; N. N. Watts, Arlington; Johnson Bros., San Diego; David H. Kelly, Corona; William Mays, Riverside; Albert Canaham, Riverside; Percy Robinson, ————; Harold Anderson, Riverside; Thurman B. Irwin, Ontario; Glemmill & Son, Ontario.

Aged boar—1, Big Timm, Buckland & McNeil.

Sr. yearling—1, Navy Boy, Gatewood & Stevens; 2, Giant Prospect, Buckland & McNeil.

Jr. yearling—1, Liberty Ladd, Watts.

Sr. pig—1, Giant Checkers, Buckland & McNeil.

Jr. pig—1, The Flash, Buckland & McNeil; 2, The Spark, Buckland & McNeil.

Aged sow—1, Hawkeye Maid, Buckland & McNeil; 2, Polandale Betty, Buckland & McNeil; 3, Model May, Johnson Bros.; 4, Mary Pickford, Watts.

Sr. yearling—1, Prospect Molly, Buckland & McNeil; 2, Molly Prospect, Buckland & McNeil; 3, Model Mary, Johnson Bros.; 4, Model Betty II, Kelly.

Jr. yearling—1, Orange Ideal, Buckland & McNeil; 2, Lady Model, Johnson Bros.; 3, Model Queen, Johnson; 4, Perfection 4th, Watts.

Sr. pig—1, Twin Lady, Irwin; 2, Model Betty III, Kelly; 3, Lady Timm, Glemmill & Son; 4, Model Beauty, Johnson Bros.

Jr. pig—1, Miss King Cole. Buckland & McNeil; 2, Lady Beautiful, Buckland & McNeil; 3, Mays; 4, Mays.

Aged herd—1. Buckland & McNeil; 2, Buckland & McNeil.

Young herd—1-2, Buckland & McNeil; 3, Mays.

Young herd bred by exhibitor—1, Buckland & McNeil; 2, Mays.

Get of sire—1, Buckland & McNeil; 2, Mays; 3, Robinson; 4, Canaham.

Produce of sow—1, Buckland & McNeil; 2, Mays; 3, Johnson Bros; 4, Robinson.

Barrows—1, Anderson; 2, Buckland & McNeil; 3, Anderson.

Three fat barrows under 1 year—1, Anderson.

Sr. and grand champion boar—Navy Boy.

Jr. champion boar—The Flash.

Sr. and grand champion sow—Hawkeye Maid.

Jr. champion sow—Miss King Cole.

Poland China promotion pig show special for litter 4 Poland China pigs farrewed on or after Mar. 1, 1921—1, Mays; 2, Robinson; 3. Babcock; 4, Watts; 5, Canaham; 6, Kelly; 7, Porter.

Durocs

The big surprise of the Duroc show was the defeat of Mong's state fair grand champion sow by Thorp's senior sow pig. This pig has been getting better right along and the honor was rightly hers.

In the boars Royal I Am walked up to the top without strenuous opposition. As has been said many times before this boar stands alone in the annals of Durocdom of California as a show hog and he is entitled to all he gets.

Mong made a strong showing again and another of his boar pigs was made junior champion, which gives him three junior championships on three boars out of one litter this season. Mong's senior yearling sow, who was grand champion at San Fernando, was suckling a fine litter at Riverside and was pulled down in flesh, which put her out of the running and also worked hardship on his aged herd. His litter was first in the futurity get of sire

Get of sire—1, Mong; 2, Goodell; 3, Wilson; 4, Craig.

Produce of dam—1, Mong; 2, Goodell; 3, Wilson; 4, Craig.

Sr. and grand champion boar—Royal I Am.

Jr. champion boar—Ain't I Sensation.

Sr. champion sow—Pathfinder High Lady.

Jr. and grand champion sow—Diamond Sensation Lady.

Berkshires

With over a hundred Berks present and with the barn beautifully decorated the Berkshire men rather hogged the hog show. The Southwestern Berkshire Congress is made up of a live bunch and the Riverside show is sort of home for them, so they have been behind it strong. With Humphrey from the North against the big bunch of Southerners it was nip and tuck from the start and the judge pronounced it the best display of pug noses he has seen this year. Escalon Artful Leader successfully defended his honors against all comers, but Stella MacDillard, a pig club girl, slipped in and garnered the junior championship. Violet's Festine, owned by the Italian Vineyard, closed her season unbeaten for grand champion female, an honor which she has held six times this year. In the juniors the senior sow pig entered by Humphrey was made junior champion.

The special litter show fostered by the American Berkshire Congress brought out considerable competition and first place was won by Humphrey.

Exhibitors: A. B. Humphrey, Escalon; D. J. Bastanchury, La Habra; Italian Vineyard, Guasti; F. L. Hall, Perris; Chester T. Johns, Ontario; Chaffey Union High School, Ontario; R. S. Jones, Etiwanda; Stella McDillard, Etiwanda; Wm. Beard, Cucamonga.

Aged boar—1, Escalon Artful Leader, Humphrey; 2, Escalon May Star, Bastanchury; 3, Model Leader 32nd, Italian Vineyard; 4, Symboleer Real Type, Italian Vineyard.

Senior yearling—1, Grape Wild Leader 4th, Humphrey; 2, Royal Type 3rd, Italian Vineyard; 3, Rose Crest Rival 10, Hall; 4, Baron Duke Natomas, Italian Vineyard.

Jr. yearling—1, Master Type, Johns; 2, Del Rio 2nd, Italian Vineyard; 3, LaHabra May Star, Bastanchury; 4, Grape Wild Champion, Humphrey.

Sr. pig—1, Laurel Achievement, Hall; 2, Riverby Rival 2nd, Nelson; 3, Guasti's Leader Champion, Italian Vineyard; 4, Grape Wild Duke, Humphrey.

Jr. pig—1, Etiwanda Duke, Stella McDillard; 2, Belles Winona Leader, Johns; 3, Escalon Artful Leader 10th, Humphrey; 4, Belles Winona Leader 2nd, Johns.

Aged sow—1, Violet's Festine, Italian Vineyard; 2, Grape Wild Rose 6th, Humphrey; 3, Grape Wild Rose 9th, Humphrey; 4, Escalon Belle 4th, Johns.

Sr. yearling—1, Castle View Royal Duchess, Italian Vineyard; 2, Real Type Belle 4th, Italian Vineyard; 3, Lassie Rose, Hall; 4, Escalon Princess 8th, Humphrey.

Jr. yearling—1, Real Type's Lassie 1st, Johns; 2, Peerless Royal Lady, Italian Vineyard; 3, Real Type's Lassie 2nd, Johns; 4, Matchless Lady Type, Italian Vineyard.

Sr. pig—1, Grape Wild Bernice 13th, Humphreys; 2, Grape Wild Laurel 2nd, Humphreys; 3, Champion Lassie, Johns; 4, Escalon Ruby, Humphreys.

Jr. pig—1, Escalon Artful Princess 1st, Humphreys; 2, Guasti Wondress, Italian Vineyard; 3, Lady Winona Pride, Italian Vineyard; 4, Winona Belle 7th, Johns.

Aged herd—1, Humphreys; 2, Johns; 3, Italian Vineyard; 4, Italian Vineyard.

Young herd—1, Humphreys; 2, Italian Vineyard; 3, Johns; 4, Italian Vineyard.

Aged herd—1, Humphreys; 2, Hall.

32 Roselawn Shorthorns
At Public Auction
Roselawn Stock Farm
Owned by H. M. ELBERG
Woodland, California
Wednesday, November 16
At 1 P.M.

Village Beauty E

ROSELAWN SHORTHORNS, one of the longest established herds in the west, have for many years been held in the highest esteem by buyers of dependable Shorthorns.
Directed by constructive breeding practice, and by progressive business methods, the herd has consistently merited its high place among the units of the breed in the west.
Since its last public sale in 1919 the herd has multiplied upon itself and has been strengthened by the addition of choice individuals of fashionable pedigree, until the owner is again in position to offer at public sale a class of Shorthorns that will fully maintain the high standard of the herd.
The offering contains both Scotch and Scotch topped cattle, including cows with calves at foot, bred and open heifers, and a limited number of good young bulls.
Guaranteed Breeders—Tuberculin Tested
TERMS OF SALE: Responsible parties may arrange for credit, with the sale managers, on the basis of one-half cash, balance in six months, with approved notes bearing eight per cent interest, all credit arrangements to be made prior to sale.

88 REGISTERED HOLSTEINS 88
AT PUBLIC AUCTION

Palo Alto Stock Farm
Palo Alto, Calif.
Wednesday, November 9
at 10 A.M.

This offering, the first individual public sale from this well known herd, is composed very largely of young cows and heifers of famous blood lines, many with excellent short or long time records, or both, and includes a large number of daughters of

KING PONTIAC SEGIS KORNDYKE, who now has 31 A. R. O. daughters. He is a 30-pound son of King Segis De Kol Korndyke, full brother to King Segis Pontiac.

FINDERNE KORNDYKE NETHERLAND, a son of King Pontiac Segis Korndyke, out of a 31-lb. daughter of Gordon Glen Pontiac.

CARNATION SEGIS WALKER, a son of Johanna McKinley Segis, out of a paternal sister to Segis Pietertje Prospect, the world's record milk cow.

RAG APPLE IMPERIAL KORNDYKE, proven son of Rag Apple Korndyke, and whose daughters are now making some excellent long time records.

This sale affords a great opportunity for selection of young females bred in some of the greatest producing lines of the breed.

EVERY ANIMAL POSITIVELY GUARANTEED TO BE A BREEDER; EVERY ANIMAL OVER SIX MONTHS OLD TUBERCULIN TESTED AND SOLD SUBJECT TO RETEST BY THE BUYER.

Nate Hauck of Humboldt County Wins Cultivator Prize

By Prof. F. W. Woll

Five grade cows owned by Nate Hauck of Alton had the highest average production of butter fat of similar groups in herds entered in the state dairy cow competition during the month of September, viz., 59.16 pounds and the California Cultivator prize for that month was accordingly awarded to him. The production of the individual grades for the month was as follows:

	Age, Years	Days in Milk	Milk Lbs.	Butter Per ct.	Fat Lbs.
Chub	5	78	1386	4.9	67.91
Lily	4	84	1116	5.9	65.84
Bird	6	117	1047	5.3	55.49
Bally	12	168	1602	3.4	54.47
Slow	4	183	930	5.6	52.08
Average	6	126	1216	4.86	59.16

All are grade Jerseys except Bally, a grade Holstein.

This is the second time that this prize has been awarded to Mr. Hauck as he also won it last June for the production of five other grades in his herd. It will be seen that the production of the prize winning grades for September ranged from 67.91 pounds to 52.08 pounds of butter fat, the average production of milk being 1216 pounds, with an average fat content of 4.86 per cent (average distance from calving at beginning of month, 126 days).

These cows stood first among similar groups of five grades in 21 dairy herds in different parts of the state that competed for the Cultivator prize the past month. The average production of butter fat for nine of the groups came above 50 pounds, the lowest producing grades averaging 27.60 pounds. Five grades owned by the following dairy farmers produced an average of over 50 pounds of fat during the month, viz., N. Hauck, Alton, 59.16 pounds; Earl Graham, Compton, 56.23 pounds; P. Iverson, Grizzly Bluff, 55.13 pounds; M. Pontoni, Arcata, 54.86 pounds; Leo Christen, Waddington, 53.73 pounds; University Dairy, Berkeley, 52.53 pounds; J. A. Herbers, Waddington, 51.27 pounds; J. A. Genzoli, Loleta, 51.07 pounds; and W. D. Early, Grizzly Bluff, 50.01 pounds.

This is the sixth mouth in succession that the Cultivator prize has gone to a Humboldt County farmer, and honors are now even between this and Los Angeles County in connection with this prize, both counties having secured it six times to date. As the cows in the northern county freshened in the spring, some as late as April and May, they have a great advantage over cows in other herds that were entered early in the competition and are now about to finish their record periods. An average production of nearly 60 pounds of butter fat by the prize winning grades at more than four months from frehening is, however, most creditable and reflects great credit both on the owner, the cows and the section they represent.

Famous Jersey Cow

When Sphie 19th of Hood Farm made the world's Jersey record of 999 pounds of butter fat a few years ago there were many who thought that this great animal had been pushed to the limit and would never again make a great record. When she finished that record she was eight years and eleven months of age, and her latest record is the fifth she has made since that time.

Sophie 19th has been the dam of many registered calves, among which is Pogis 99th of Hood Farm, without a doubt one of the greatest production sires of the dairy world. Pogis 99th has been the sire of such cows as Sophie's Agnes, Sophie's Adora and Sophie's Bertha.

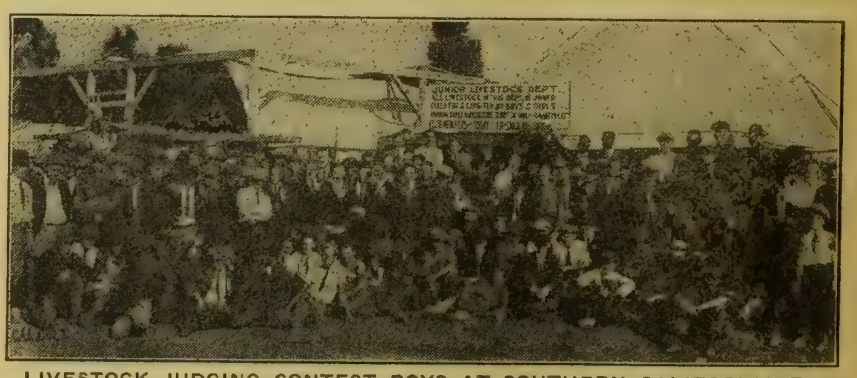
A summary of the ten year's records made by Sophie 19th follows: 12,185 pounds milk, 683.20 pounds fat, at 15 years, 8 months; 10,360.9 pounds milk, 566.56 pounds fat, at 14 years, 6 months; 8,688.2 pounds milk, 507.26 pounds fat, at 13 years; 15,948.2 pounds milk, 847.87 pounds fat, at 11 years, 9 months; 11,915.4 pounds milk, 680.49 pounds fat, at 9 years, 7 months; 17,557.8 pounds milk, 999.10 pounds fat, at 7 years, 11 months; 15,099.4 pounds milk, 931.90 pounds fat, at 6 years, 7 months; 14,373.2 pounds milk, 854.90 pounds fat, at 4 years, 11 months; 9,924.8 pounds milk, 570.80 pounds fat, at 3 years, 8 months; 7,050.2 pounds milk, 395.90 pounds fat, at 2 years, 2 months.

Some of the interesting sidelights to this phenomenal cow's life work are that Sophie has held two class championships, has never been passed as a producer of butter fat since her fifth record for long distance production, is a record holder for cows beginning test at such advanced age as on her last record; has had granddaughters that exceeded her production at the same ages and that have also been breed champions. She is still in good health with good prospects of stretching her record even further.

She has given enough milk to supply 20 children each with a quart of milk daily for ten years. Sophie has also contributed enough to the farm business to register $10,000 in the cash sale of her products either way you figure it—milk or butter, and she has also contributed several times this amount in the value of her progeny. She has been shown at several of the biggest dairy cattle shows in America, and when traveling has been insured for as much as $50,000.

POISONOUS MILKWEEO

All milkweeds (asclepias) are poisonous to livestock, though freely eaten by sheep only. When range conditions are good it is thought not even sheep will eat these plants. But they persist in dry tracts when all other vegetation has dried up, hence the danger. Asclepias Mexicana is one poisonous species found in all parts of California, north to southern Washington, east to western Nevada, and a small area in western Arizona. It is the narrowest leaved of all milkweeds, grows two to five feet high generally, but may range from one to ten feet. Not only should the plants be cut down in pastures, but the roots should be dug out.



LIVESTOCK JUDGING CONTEST BOYS AT SOUTHERN CALIFORNIA FAIR

This was the greatest judging contest ever held in California. From this bunch two are chosen to be sent as a part of California's team which will compete at the Chicago International. John F. Osborn, farm adviser for Riverside County, is standing at reader's extreme left. R. A. Condee of California Junior Republic is on extreme right. J. B. Lillard, state supervisor of agricultural education, Prof. Hughes, Prof. Tomson and J. I. Thompson are kneeling near center of picture.

Southern California Fair

COMING at the end of the fair season the Southern California fair at Riverside acted as a sort of clean-up show and brought together the largest classes of all breeds of dairy stock and hogs that were shown during the season of 1920. Beef cattle and horses were not so numerous but practically all breeds were represented by at least one herd of good ones.

Mr. Standish of Ohio, who judged the dairy cattle, and Carl P. Thompson of Oklahoma, who handled the hogs, were high in their praises of the quality and quantity of stock shown.

DAIRY CATTLE

Holsteins

Exhibitors: E. R. Stalder, Wineville; Robt. Clapp, Nuevo; Bost & Johnstone, Corona; Sierra Vista Ranch, Perris; Carl Ray, Lankershim; Maxwell Farms, Hollywood; E. G. Stinson, Orange; Berylwood Stock Farms, Hueneme; Perle R. Penrose, Pomona; Chaffey Union High School, Ontario.

Aged bull—1, King Segis Pontiac Jannek, Santa Monica; 2, Prince Aralia, Clapp; 3, Prince Clothilde De Kol Nomstead, Bost & Johnstone; 4, K. P. Neth. Segis 3rd, Stalder.

2 year old—1, Sir Ormsby Skylark Rauwerd, Sierra Vista; 2, K. S. P. Count, Clapp; 3, Prince Julianna Fayne, Ray; 4, Republic Tuebie Korndyke, Penrose.

Sr. yearling—1, Sir Ormsby Heng. Sky., Maxwell; 2, King Segis Pontiac Acro. Clapp.

Jr. yearling—1, Dichter Spofford Korndyke Vale, Stinson.

Sr. calf—1, Nuevo De Kol Ormsby, Stalder; 2, Berylwood Fobes Korndyke, Berylwood; 3, S. V. Ormsby Pontiac Goldrop, Sierra Vista; 4, Tritomia Orms. Piet. Fayne, Maxwell.

Jr. calf—1, Prince Alcartra Walker Segis, Berylwood; 2, Sir Orms. Aralia Skylark, Sierra Vista; 3, Lady Pansy J. Ormsby, Maxwell; 4, Col. Netherland Segis, Clapp.

Aged cow—1, Segis Walker Gelsche, Clapp; 2, Joy Heng. Clothilde, Maxwell; 3, Nancy Calamo Korndyke, Clapp; 4, Beauty de Kol Reka Ormsby, Hartsook.

2 year old—1, Queen Orms. Netherland Parthenia, Maxwell; 2, K. S. P. Joy May Beets, Clapp; 3, Dorothy Aralia de Kol, Bost & Johnstone; 4, K. S. P. Clothilde Lady, Clapp.

Sr. yearling—1, Lily McKinley Ormsby Skylark, Maxwell; 2, Korndyke Segis Pont. Jannek, Hartsook; 3, Wadnah Ormsby Skylark, Maxwell; 4, K. L. B. D. K. Airplane Belle, Ray.

Jr. yearling—1, Juliana Pont. Nancy, Sierra Vista; 2, Miss Aaggie Mead de Kol Veeman, Santa Monica; 3, Burbank Witkop Rodnick, Santa Monica; 4, Burbank Roxanna Alcartra, Hartsook.

Sr. calf—1, Nuevo Aralia Rowena Ormsby, Stalder; 2, Pearl Walker Gelsche, Clapp; 3, Julianna Repeater Marco Alcartra, Hartsook; 4, Pansy Sky Tritomia Ormsby, Maxwell.

Jr. calf—1, Carolyn Wayne Fayne, Hartsook; 2, Nuevo Zozo Ormsby, Stalder; 3, Nuevo Vinito Ormsby, Stalder; 4, Flush Ormsby Tritomia, Maxwell.

Aged herd—1, Santa Monica; 2, Clapp.

Breeders young herd—1, Maxwell; 2, Hartsook.

Calf herd—1, Maxwell; 2, Hartsook; 3, Sierra Vista; 4, Stalder.

Dairy herd—1, Clapp; 2, Hartsook; 3, Maxwell; 4, Bost & Johnstone.

Get of sire—1, Maxwell; 2, Sierra Vista; 3, Stalder; 4, Maxwell.

Produce of dam—1, Sierra Vista; 2, Hartsook; 3, Maxwell; 4, Clapp.

Sr. and grand champion bull, King Segis Pontiac Jannek.

Jr. champion bull, Prince Alcartra Walker Segis.

Sr. and grand champion cow, Segis Walker Gelsche.

Jr. champion cow, Caroline Wayne Fayne.

Jerseys by Jack Klein

For the first time this season Jim Thorp of Lockeford ran into a Jersey show where he had to extend himself to the utmost to win, and even then he lost a number of classes. Cook's Jersey Dairy of Chino entered a strong herd and together with J. E. Wherrell and George Thomas of Riverside cut into Thorp's usual winnings, but Jim was successful in winning senior and grand championships in both sexes. Fortini's young bull was again junior champion and Thorp won junior champion female. Wherrell and Thomas took most of the group prizes excepting aged herd and dairy herd, which went to Thorp. It was an extremely strong show and no one was beaten until the ribbons were tied.

Exhibitors: J. E. Thorp, Lockeford; Geo. W. Thomas & Sons, Riverside; Cooks Jersey Dairy, Chino; C. McLouth, Clearwater; Gaines, Clearwater; McMinn & Ralson, Corona; M. Fortini, Orland; J. E. Wherrell, Riverside.

Aged bull—1, Jolly Senator Raleigh, Thorp; 2, Nobles Raleigh's Major, Thomas; 3, Lilys Lowland Fern, Cooks; 4, Mascots Raleigh, Louth.

2 year old—1, Sans Aloio Brightness, Cooks; 2, Biddys Kings of Mossdale, Thorp.

Sr. yearling—1, Fairy Boy of Mossdale, Thorp; 2, Jacobs Raleigh, Gaines.

Jr. yearling—1, Gypsy King Raleigh, McMinn & Ralson; 2, Spring Jack, Thorp; 3, Mks Raleigh, Thomas; 4, K. F. Buttercup King, Thorp.

Sr. calf—1, Orla of Tintagel, Fortini; 2, Solid Golden's You'll Do, Wherrell; 3, Snowdrop Oxford Prince, Wherrell; 4, Biddy's King of Mossdale, Jr., Thorp.

Jr. calf—1, King Tip of Mossdale, Jr., Thorp; 2, Fern's Beyy's Champion, Cook; 3, Unnamed, McClouth.

Aged cow — 1, Salome of Mossdale, Thorp; 2, Naomi of Mossdale, Thorp; 3, Dame Vilda, Thomas; 4, Goldie Nehalem Cowslip, Thorp.

2 yrs.—1, Imp. Bertha, Cooks; 2, Oxfords Noras Daisy, Thorp; 3, Nobles Jewel Girl, Thomas; 4, Rowenas Eminent Jewel, Cook.

Sr. yearling — 1, Shylocks Countess, Cook; 2, Jolly Ementa of Mossdale, Thorp; 3, Nobles Vilda, Thomas; 4, Watkins Vilda, Thomas.

Jr. yearling—1, Coraline of Golden Glenn, Thomas; 2, Ramona of Mossdale, Thorp; 3, Elodine's Oakhurst Star, Cook; 4, Raleighs Areto, McClouth.

St. calf—1, Watersus Mossdale, Thorp; 2, Goldie of Mossdale, Thorp; Priscilla Prince Ardelle, Wherrell; 4, Town Lass Dottie Dell, Wherrell.

Jr. calf—1, Kings Miss of Mossdale, Thorp; 2, Priscilla Prince Daisy, Wherrell; 3, Ferns Interested Violet, Cooks; 4, Priscilla Prince Bessie, Wherrell.

Aged herd—1, Thorp; 2, Thomas; 3, Cook; 4, McClouth.

Young herd—1, Thomas; 2, Thorp; 3, Cook.

Calf herd—1, Wherrell; 2, Wherrell; 3, Cook.

Dairy herd—1, Thorp; 2, Thomas; 3, Cook.

Get of sire—1, Thomas, 2, Wherrell; 3, Thorp; 4, McClouth.

Produce of dam—1, Wherrell; 2, Thorp; 3, McClouth.

Senior and grand champion bull— Jolly Senator Raleigh.

Junior champion bull—Orland Tintagel.

Senior and grand champion cow—Salome of Mossdale.

Junior champion cow—Kings Miss of Mossdale.

Guernseys

In the Guernseys a number of herds which have had considerable success during the season came together, and it was a hot fight from the start. Humphrey's aged bull, who was grand champion at the state fair, was alone in his class but was beaten by the great two year old owned by Adohr Stock Farms for senior champion. This bull was beaten in turn by the junior champion owned by the Windmere Ranch of Chino for the grand championship. There was considerable hesitation on the part of the judge before he placed the young bull first but the decision was well merited.

In the females Imp. Lulu's Pride of the Salines, a noted English show cow now owned by the Windmere Ranch, was outstanding. This cow was bought by Chas L. Hill, Guernsey importer for Walter Dupee a couple of years ago, and was later sold to Dr. Wessels of San Diego, who owns the Windmere Ranch. Humphrey won junior champion female and a number of firsts. Russell S. Cox of San Marcos and A. A. Cook of Brawley were newcomers at the show but were in the money a number of times.

Exhibitors: A. B. Humphrey, Escalon; Adohr Stock Farm, Van Nuys; Russell S. Cox, San Marcos; C. G. Wallace, San Bernardino; Windmere Farm, Chino; A. A. Cook, Brawley; J. A. Hammer, Riverside; Jas. Marwick, Santa Barbara.

Aged bull—1, Nobleman of Maple Hill, Humphrey.

2 yrs.—1, Inspiration of Edgemoor, Adohr; 2, Reliance of Edgemoor, Cox; 3, Hidden Valley Acadia, Wallace.

Junior yearling—1, Imp. Man of War of Edgemoor, Windmere; 2, Gold May Secret of Edgemoor, Cook; 3, Brilliant's May Seeret of Edgemoor, Windmere; 4, Escalon Rex, Humphrey.

Senior calf—1, Aristocrat of Windmere.

55 Royally Bred Young Registered Holsteins 55

40 FEMALES — 15 BULLS

SELLING AT PUBLIC AUCTION BY

A. W. Morris & Sons Corporation, Woodland, Cal.

At State Fair Grounds, Sacramento, Cal.

Thursday, November 3, at 10 A.M.

Never before have buyers had an opportunity to secure at their own price so large a number of young cattle from this herd, sired by the best Morris herd bulls, out of dams of rich breeding and many with great records, and most of the females carrying the service of one or the other of the great present Morris herd sires.

While a considerable number of the young females in the sale have 7 and 305 day records, there are many 2 year olds that are milking and have no records, due to the fact that there has not been barn room enough on the Coil place to house these heifers as they have freshened, and buyers are certain to secure some great bargains in these heifers.

ALL OF THE FEMALES EXCEPT FOUR IN THIS SALE ARE SIRED BY SIR AAGGIE DE KOL ACME, KING MEAD OF RIVERSIDE, PRINCE GELSCHE WALKER, KING MORCO ALCARTRA, OR SEGIS PONTIAC DE KOL BURKE, EVERY ONE OF WHICH HAS SIRED A WORLD'S RECORD DAUGHTER OR IS OUT OF A DAM THAT HAS BEEN A WORLD RECORD PRODUCER.

THE DAUGHTERS OF SIR AAGGIE DE KOL ACME include some with 305 day records up to over 653 lbs. butter for first calf 2 year olds, and are out of dams with records up to over 30 lbs. butter in 7 days and up to over 1,000 lbs. in one year.

THE DAUGHTERS OF SEGIS PONTIAC DE KOL BURKE include some with records up to over 763 lbs. butter in 365 days for a senior 2 year old, some out of high record dams.

THE DAUGHTERS OF KING MORCO ALCARTRA, KING MEAD OF RIVERSIDE, AND PRINCE GELSCHE WALKER, are practically all 2 and 3 year olds, many out of dams with high 7 day and 365 day records, and a large number of them due to calve this fall and early winter.

BULLS TO WHICH FEMALES IN THIS SALE ARE BRED

All of the best females in this sale are bred to Sir Aaggie De Kol Acme, Sir Aaggie De Kol Mead, Sir Prince Aaggie Mead, or King Aaggie Mead. Calves from any one of them, out of such dams as will be found in this sale, would add value and attractiveness to the best herd in America.

REMEMBER that nineteen of the great young females in this sale are due to calve before December 10 to SIR AAGGIE DE KOL MEAD, whose calves are rated in the Morris herd as perhaps the most promising they have yet secured from any bull.

A detailed list of the great young females in this sale is needless at this time, for the fact that they are sired by the Morris herd sires noted above, mostly out of dams sired by herd sires that have been in use in the Morris herd during the past years, and that they sell mostly bred to the great young sires noted above is evidence enough of the outstanding quality of the offering.

ELEVENTH HOUR ENTRIES

Just before the catalog went to press we received three additional entries, ONE OF THEM A 16 POUND JUNIOR 2 YEAR OLD DAUGHTER OF THE

$12,000.00 BULL KING KORNDYKE PONTIAC 20TH, fresh in July, and an 18.70 lb. junior 2-year-old, and a 19.75 lb. junior 2-year-old daughter of a 30 pound bull, both heavy in calf to Sir Aaggie De Kol Mead, making 21 females in this sale due to calve to his service before December 10.

FIFTEEN YOUNG BULLS IN THE SALE

The bulls in the offering include several that should head purebred herds, and a splendid lot that will introduce the world's most productive blood into grade herds. All of them are sired by Sir Aaggie De Kol Acme, Sir Aaggie De Kol Mead, Sir Aaggie Mead De Kol, or King Aaggie Mead, and out of dams of rich breeding, some with records up to over 35 lbs. butter in 7 days; others with good yearly records.

EVERY ANIMAL POSITIVELY GUARANTEED TO BE A BREEDER; EVERY ANIMAL TUBERCULIN TESTED AND SOLD SUBJECT TO RETEST BY THE BUYER.

TERMS OF SALE: Responsible parties may arrange for credit on the basis of one-third cash, balance in three, six, and nine months, with approved notes bearing eight per cent interest, if arrangements for credit are made before sale with California Breeders Sales and Pedigree Co.

Headquarters of Sale: Travelers Hotel, Fifth and J Sts., Sacramento, Cal.

Jr. and grand champion bull—Imp. Man of War of Edgemoor.

Sr. and grand champion cow — Imp. Lulu's Pride of the Salines.

Jr. champion cow—Escalon Naomi.

Ayrshires

In the Ayrshire classes A. A. MacMinn of Phoenix and Mark Butterfield of Riverside were the only exhibitors and practically all of the honors went to MacMinn, who has a large herd of show stock.

Exhibitors: A. McMinn, Phoenix, Arizona; Mark Butterfield, Riverside.

Aged bull—1, King of Beauty, McMinn.

Sr. yearling—1, Finlayston Sunset, Butterfield.

Jr. yearling—1, Desert Crest Monarch, McMinn.

Sr. calf—1, Ayrshire Billy Boy, McMinn; 2, Elnora Boy, McMinn.

Jr. calf—1, Lochinvar Laddie, McMinn; 2, Ivy's Butter Boy, McMinn; 3, Mojist of Lochinvar, McMinn.

Aged cow—1, University of Ivy Rose; 2, Ella Dean of Mesa, McMinn.

2 years—1, Sweet Marie of Phoenix; 2, Bonnie Jean of Mountain View, McMinn.

Sr. yearling—1, August Lassy, McMinn; 2, Pullthru Fourth of Intervalley, Butterfield; 3, Heather Bell of Phoenix, McMinn.

Jr. yearling—1, Grace of Litchfield; 2, Arizona Dairy Maid; 3, Arizona Grace Darling, McMinn.

Sr. calf—1, Edith Cavell; 2, Lochinvar Jean Ayre, McMinn.

Jr. calf—1, Lochinvar Lassy; 2, Lochinvar Isabella; 3, Lochinvar Queen, McMinn.

Aged herd—1, McMinn.

Young hard—1 and 2, McMinn.

Calf herd—1 and 2, McMinn.

Dairy herd—1, McMinn.

Get of sire—1, 2 and 3, McMinn.

Produce of dam—1, 2 and 3, McMinn.

Sr. and grand champion bull—King of Beauty.

Jr. champion bull—Lochinvar Laddie.

Sr. and grand champion cow — Allen Dean of Mesa.

Jr. champion cow—August Lassie.

Dairy Shorthorns

All honors to Fred Hall of Perris.

(For comment on swine exhibits and awards see Page 450.)

HOG SALE SUCCESS

The Sutter County farm bureau put over its first hog auction sale last Tuesday, October 18, 1921, at E. A. Noyes & Sons Ranch near Sutter City. Over 200 hogs were sold, with the tops bringing $10.25 and the heavy stuff $9.40. These were exceptionally high prices for a San Francisco market of 10 cents. President G. C. Galbraith of the Sutter County farm bureau stepped in and graded the hogs when the regular grader did not appear. He did exceptional work as the price indicates. The buyers were J. A. Wood and Valley Meat Co.

Regular monthly sales are to be held from now on and it is hoped that later a sale at Meridan and one at Yuba City can be arranged. W. U. Hudson, manager of the farm bureau, states that it is the hope that fruit growers can be shown the advantage of diversified crops. It is a proven fact that hogs can be raised along with fruit to good advantage.

"BEE MEET"

A get-together meeting of beekeepers will be held at Exposition Park, Los Angeles, Friday and Saturday, November 4 and 5. Sessions will be held in the Assembly Room. Opening session, 10 a. m., Friday. The arrangement committee writes:

"A regular old-time, dyed-in-the-wool 'Bee Meet' for everyone. This will be the biggest meeting of bee interests in years.

"We hope to organize to insure one of its kind for Los Angeles at least once each year. Come and help to make it what you want it to be. Bring your lunch; free coffee and trimmings furnished. A large number of prominent bee men are on the program, and fine music is promised.

"A $10 prize in bee supplies is offered for the shortest acceptable name for the new organization."

Publicity committee—C. A. Schirm, chairman, Los Angeles; H. E. Sweet, Los Angeles; T. O. Andrews, Corona; M. H. Mendleson, Ventura; L. W. Wells, Somis.

Program and finance committee—Geo. L. Emerson, chairman, Los Angeles; F. W. Ferree, Saugus; Ted Cookingham, Los Angeles; C. P. Vandruff, Pomona; Miss E. A. Barr, Los Angeles.

Mutual Husbandry Club

NOW BEING FORMED TO DEVELOP A

New Irrigation District in Fresno County

Let us tell you all the details of the Mutual Husbandry Club. There are thousands of acres of land in Fresno County with unlimited agricultural possibilities when put under irrigation.

We want 500 members to vote the district — more than 250 have already joined. Members of the Club can obtain land at dry land prices of $50.00 per acre. Big profits can be made when district is voted.

POULTRY

Continued requests are being received by the California Cultivator for varieties of poultry not advertised in our columns. If any of you, our readers and friends, have any you wish to dispose of, send a small advertisement to this office and you will be doing our readers a service as well as yourselves.

Day Old Pullets—Here is your chance to get day old White Leghorn and Ancona chicks, guaranteed at least 90 per cent pullets. We are taking orders fast for October and November delivery. We also have R. I. Red and Barred Rock chicks but do not separate the sex. All chicks are from strictly thoroughbred laying stock and are hatched right and shipped by Special Delivery Parcel Post. Send for prices and get your orders in at once. Orange County Hatchery, Santa Ana, California.

1922—MISSION HATCHERY—1922
Early Chicks are the ones that pay first and best. Our Special Letter will tell why we think so. Write for it and particulars of our White, Brown Leghorns, Black Minorcas, R. I. Reds, Barred and White Rocks. Our matings are purebred heavy laying strains; "quality high, service good, prices reasonable." Write your needs and see if we can not get together. Mission Hatchery, Box 27, Campbell, Cal.

It's no wonder so many poultry raisers make a failure of the business. Without any knowledge of raising poultry people will branch out expecting to make a success. By putting in practice the valuable contents of POULTRY FOR PROFIT, $1.00 postpaid, success is assured in the poultry business. Cultivator Publishing Company, Los Angeles, California.

Sly's Single Comb Rhode Island Reds again show their quality, winning at San Fernando and Ventura seven first prizes, two silver cups, many special honors and other ribbons. Am offering a limited number of line-bred cockerels at $7.50, $10.00 and $15.00; excellent breeders. Send for yours today. Albert Sly, 1642 Middleton Place, Los Angeles.

White Leghorn Baby Chicks: Walter Hogan stock. We get all our eggs from one flock of over 4,000 Walter Hogan hens that have been carefully Hoganized. Our specialty is first class White Leghorn chicks that satisfy our customers. We will have chicks every week. Lyon Hatchery, Gardena, California.

Baby Chicks hatched in Petaluma Incubators are a superior class. Strong, vigorous, sturdy, grow rapidly, lay early. Buy chicks from hatcheries using Petaluma Incubators. You will find one near you, if not, write us. Catalog free. Petaluma Electric Incubator Co., Petaluma, California.

White Leghorn Baby Chicks from heaviest laying (Hoganized) stock. Safe delivery live, vigorous chicks guaranteed. No money in advance; pay on delivery. Prices on request. Established 1898. MUST HATCH INCUBATOR CO., 438 Seventh St., Petaluma, California.

Baby Chicks from 227 egg strain of heavy winter laying S. C. White Leghorns. Book your order now for 1922 delivery of guaranteed chicks and hatching eggs. Pullets and breeding stock. Meyer Poultry Farm, Route A, Box 17-C, Modesto, California.

Baby Chicks—Booking now for 1922 delivery. Order early. White Leghorns, R. I. Reds. Brown Leghorns, Barred Rocks. Write for circular. Stubbe Poultry Ranch and Hatchery, P. O. Box 67-E, Palo Alto, California.

200 Egg Strain S. C. R. I. Reds—Cockerels from hens with trapnest records of over 200 eggs in 12 months; $5.00 and $10.00 each. Also a few cockerels from Ward's prize winners at $5.00 to $25.00 each. Chester D. McCord, Galt, California.

For Sale—Barred Plymouth Rocks; prize winners; some extra fine cockerels for sale now. Eggs for hatching in season; satisfaction guaranteed. Mrs. J. W. Snodgrass, Los Olivos, California.

Barred Plymouth Rocks — "Wonderful Layers," champion prize winners. Nothing better in poultry. Choice stock and hatching eggs. Catalog free. Charles H. Vodden, Los Gatos, California.

White Leghorn Baby Chix from Petaluma's heaviest producing stock. We guarantee safe arrival. Literature on request. Pioneer Hatchery, 409 Sixth Street, Petaluma, California.

For Sale: Buff Leghorn cockerels, hens and pullets. Excellent strain of prize winners. W. L. Bartholomew, Chino, California.

Cooperative Pioneers

By Cornele G. Ross, Chairman Executive Committee, Poultry Producers of Southern California

CALIFORNIA poultry producers have been priding themselves that they were the first to recognize the necessity for cooperative effort in marketing their products and to successfully work together for the good of the industry in which they are engaged. A recent issue of the New York Produce Review gave some late data regarding the poultry industry in Denmark, and the writer has thought it would be interesting to our members to know that we were only backward followers of what that industrious nation has long been enjoying in this respect. In comparing the figures which are here given it should be remembered that the area of Denmark is only about one-tenth of that of California, while their total population is very little, if any, in excess of that of our own state.

The Danish farmers began cooperating about 1886, and the movement has grown until it is practically universal, both for selling and buying, to say nothing of a savings and credit system of a similar nature. The growth of the poultry industry may be indicated by the census returns, which were first recorded for 1888, at which time there were 4,592,000 head of poultry in the country; in 1914 this had increased to 15,140,000, but decreased slightly during the World War because of the embargo on cereals and foodstuffs, much of which had to be imported; but in 1920 it had again risen to 13,997,000 head.

Poultry seems to be almost universally kept among the people in Denmark. Clerks, federal employes and others keep small flocks in addition to those kept by every farmer, and there are numerous cooperative groups which apparently affiliate and work together for the export of their product which amounts to upwards of 65 per cent of the entire output. Their cooperative export organization was formed in 1895 and is known as Dansk Andels-Aegexport, or the Danish Cooperative Egg Export. A few exports are also made by private firms and the great bulk of all the exports go to England.

In 1914 the Danish supplied England with 20 per cent of their imported eggs, amounting to 37,269,670 dozen, this being about 95 per cent of all the Danish export of eggs. Since the war, however, a little larger percentage of the Danish exports are going to other countries and in 1920 their total export amounted to about 45,000,000 dozens of eggs.

This business has been built up entirely by a consistent effort during the past 25 years to raise the quality of the Danish product until at the present time their eggs command top figures. Their cooperative societies require that every producer stamp every egg with his number, while each assembling station also stamps its number on the egg, thus making it nearly possible to trace an egg "from the English breakfast table to the hen which laid it." In addition to this their grading requirements are no doubt higher than anywhere else in the world, the eggs being sorted by size and weight into six and sometimes seven grades, according to the weight per "great hundred," or 120 eggs, and are known as 13, 14, 15, 16, 17 and 18-pound, and sometimes 20-pound. Their 16-pound grade would be about the same as our Extras, while their 18-pound grade would run nearly 29 ounces to the dozen; so our members can see what will happen to our present grading (which some have considered too strict), should we be forced to compete with the better grades of Danish eggs in foreign markets.

A comparison of the London market quotations on eggs will give some idea of the standing of the Danish product, and it might be remarked in passing that this quotation was for September 12, and the trade paper printing the quotation stated that the "prices on Danish eggs had slumped the week previous and the market had not recovered;" so we may take it that ordinarily their eggs would have been quoted still nearer the top figures.

London Egg Market Sept. 12, 1921

English, moderate request, 55.5c to 59.5c per doz.; Irish, 42.8c to 52.1c; Dutch, firm for whites, 53.9c to 59.5c; Danish, 18-lb., 46.5c to 50.2c; Danish, 17-lb., 44.6c to 46.5c; Danish, 16-lb., 42.8c to 48.4c; California, fair demand, 44.6c; American, fresh, 48.4c; American, stored, 46.5c; Chinese, 29.8c to 35.4c.

The Danish eggs are gathered by special collectors who pack them in large cases and deliver to the nearest packing house, of which there are a considerable number scattered throughout the country. At the packing houses the eggs are sorted as to size and weight, and placed in trays holding 120 eggs each. These trays are then placed, one by one, over a deep box which has the sides slanting towards the center, where a strong group of electric bulbs are placed; these slanting sides are covered with mirrors, or polished metal plates which reflect the light upwards through the tray of eggs. These candlers are placed in dark rooms and the reflected light enables the operator to detect and remove all off-grade eggs of whatever character. In some cases these candling benches are fitted with mirrors of the same size as the egg tray, placed at the proper angle directly in front of the face, so that the operator can work by reflected vision instead of having to look down at the tray itself. After being graded and candled the eggs are packed for shipment in strong pine cases, fitted with double partitions to give extra strength; a layer of dry straw is placed on the bottom, then a layer of wood fiber and a layer of eggs on this, then another layer of wood fiber, again a layer of eggs, and so on until four layers of eggs have been packed. These cases usually contain 1,440 eggs.

Instead of cold storing their eggs during the flush laying season, the Danish operators place them in large cement basins filled with a preservative. Prior to this, however, they have been very carefully sounded and candled, and when they are again taken from the preserving basins to be packed for export the same care is taken in handling them as described above in the case of fresh eggs. These preserved eggs are only exported in cases marked "pickled eggs."

The Danes have a country-wide breeding organization known as Denmark's Poultry Breeders Union, while the Mutual Board of Poultry Breeders, formed by representatives appointed by the large agricultural organizations of the country, hold annual competitions between the whole flocks of the well conducted poultry farms. From the farms which have received the annual awards large numbers of hatching eggs are annually sent to other farms, and in this way the grade of poultry is constantly becoming better, the state considering the matter so important that a considerable subsidy is granted for this purpose.

They also have a special poulry adviser and a special poultry clinic at the royal veterinary and agricultural college, as well as an experiment station for feeding and breeding experiments at the agricultural research laboratory of the college.

Poultry Queries

(Conducted by Jean A. Koethen.)

Mysterious Swelling

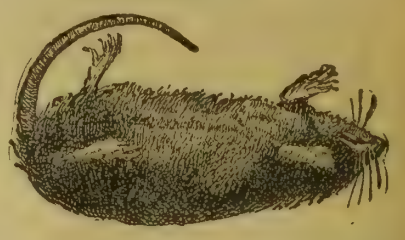
Some of my hens have died from the effects of a large swelling which appears at the lower end of the craw and finally bursts. They have access to a stack of barley hay and wheat straw. Could it be a barley beard working through?—Subscriber, Fresno.

From your description I conclude that the swelling was of the character of a boil which always comes, doctors say, from infection. It hardly seems possible that a barley beard could work its way through perfectly sound skin, but a beard or some other external object might have gotten into a

WIPE OUT EVERY RAT AND GOPHER

Amazing New Discovery Quickly Gets Every One. Not a Poison

Don't be satisfied with trapping or poisoning just a few. Exterminate the whole bunch—old, young, big and little. Rats do millions of dollars' damage each year. They kill chickens, destroy grain, damage buildings, merchandise, and are filthy disease carriers.



A wonderful new scientific discovery called Imperial Virus now enables you to clear your place of every rat on it. The amazing feature of it is that it is not a poison and affected rodents such as Rats, Mice, Gophers, Prairie Dogs, Ground Squirrels, etc., only. It is perfectly harmless to humans, stock, poultry, pets. It can, therefore, be spread anywhere knowing it will kill only the pests you want to get. One rat affects the others and in a short time the whole colony is exterminated, root and branch. They die outside, too, hunting air and water.

YOU CAN TRY IT FREE

The manufacturers of this amazing Virus, to get it quickly established and widely used, are making a Special Guaranteed Introductory Offer of two regular, big, full sized (double strength) $1.00 bottles, for the price of one. Use one yourself and sell the other to a neighbor, thus getting yours free. They will also tell you how you can make money telling your friends about it. As this offer may not appear again, you should act at once or clip for future reference.

You need send no money; just your name and address to the Imperial Laboratories, Room 215, 2110 Grand Avenue, Kansas City, Mo., and pay the postman $1.00 and a few cents postage, when the two bottles arrive. It costs you nothing if it does not do the work, as they positively guarantee to refund your $1.00 any time after 30 days if you are not satisfied.

Easy Now to Get Rid of Lice and Mites

Startling New Discovery Eliminates These Pests Without Dusting, Spraying or Dipping

Any poultry raiser can easily and quickly clean out Lice and Mites by using a new Remedy recently discovered by a Kansas City Chemist and called Imperial Lice & Mite Remedy.

All that is necessary is to occasionally put a few drops of this amazing remedy in the fowl's drinking water. It renders them immune from the attack of all blood-sucking parasites, as these pests positively will not stay on a fowl taking this remedy.

It also acts as a splendid Tonic and Blood Purifier, as well as increasing egg production and growth, for with these pests eliminated, hens lay better and young stock grows faster. It is positively guaranteed not to affect the meat or eggs.

The manufacturers of this wonderful remedy are anxious to get it quickly introduced among poultry raisers everywhere, and make this Special Introductory Offer: Send no money, just your name and address to the Imperial Laboratories, Room 522, 2110 Grand Ave., Kansas City, Mo., and they will send you a regular full sized $1.00 bottle and will also send you free a big, full sized (double strength) $1.00 package of Imperial Egg Tonic, the guaranteed egg producer. Pay the postman only $1.00 and a few cents postage when both packages are delivered. If, after 30 days' trial you are not satisfied with results just say so and your money will be cheerfully refunded.

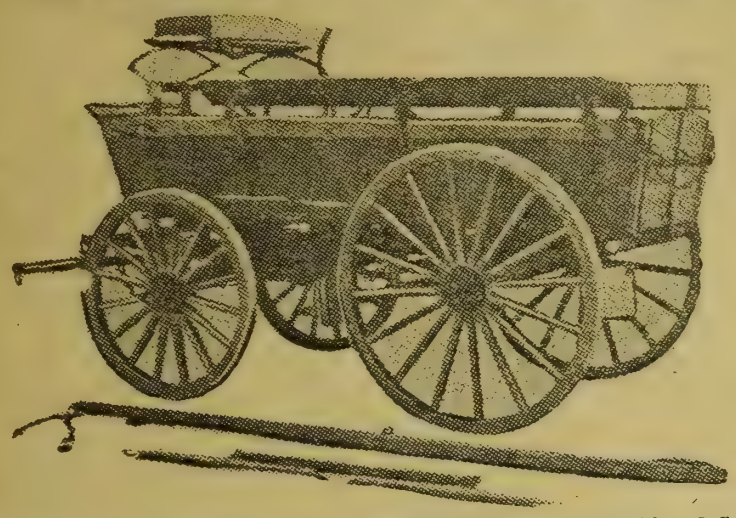
break in the skin from other cause and caused irritation and ultimately an abcess. I think you will find if you have other cases that the abcess has its beginning in an injury of some sort.

Alfalfa Hay for Greens

Will alfalfa hay cut to ¼ inch length and then steamed answer for greens during the winter months? Can I have it before the hens all day mixed with bran? I am using it in this way and the hens relish it—Subscriber, Winnemucca, Nevada.

Yes, hens like alfalfa hay and it is good for them, but I see nothing gained by steaming it or mixing it with bran, and whatever you do, it does not take the place of green feed, though it may help a little to make up for its absence. If you throw the hay in to them dry or keep it before them in a rack they will like it just as well and it will serve the same purpose in supplying protein and giving a good yellow color to the yolk of the egg, but it is not a succulent green, and you will need cut barley or kale or some green of that sort besides. California poultrymen place their main dependence during the winter on barley which grows quickly and is easily run through a clover cutter.

U. S. ARMY WAGONS



Body 10 feet long, 42 inches wide, 22 inches deep outside of flare boards. Additional 10 inches for flare boards. Genuine Sarvin wheels with 58 inch by 3½ inch steel tires. THE AUTO-OILED AERMOTOR

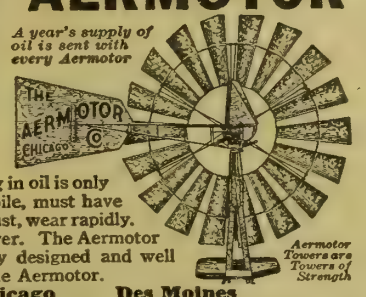
A Real Self-Oiling Windmill



Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

Turkey Problems Again

Mrs. S. M. L. of Arroyo Grande writes: "We all enjoy the Cultivator very much and I have received many helpful suggestions from its pages. I am trying to raise turkeys in a small way and have had fine luck till lately by following the advice given in the Cultivator. The past week I have lost two. On examining dead birds I found a lark colored liquid filling the body; liver very dark with light spots. I gave the sick birds liver pills and tried the ipecac treatment on the second. I feed only chopped egg, onion, cottage cheese and dry bread or rolled oats or wheat the first ten weeks, changing after that to Suregrow in place of the cereal and later to Surelay, but mixing it always with cottage cheese and onions. Some of my birds weigh 14 pounds at 4 months. Isn't that a pretty good weight? I fed three times a day till recently when I cut down to twice. Is twice a day sufficient for birds running loose? How many turkeys should I keep in order to raise 100 birds next year?"

Your feeding is good, but unnecessarily complex. After the first two months some of the most successful turkey people keep bran and rolled barley before their birds and let them eat what they will. I tried this plan this year and found the birds did just as well as when I chopped and mixed an elaborate ration for them. The first two months are the critical time. Probably it is because you overfed a little those first months that you lost the two that developed blackhead. Nobody has yet learned absolutely how to avoid overfeeding because the condition of the bird has to be taken into account. One turkey grower cuts the ration in half if his little birds seem chilly when they come in for supper. Another feels the crops of her poults and takes them away from the feed when they are full enough. I think you will need at least half a dozen breeders in order to rear 100 poults, and possibly more than that. If every egg laid was fertile, and every poult hatched lived to grow up you might manage with two, but we all know what loss there is between the egg in the nest and the full grown turkey. Fourteen pounds at 4 months is very good.

White Orpingtons

Can you give me the address of the parties who took prizes on White Orpingtons at the San Fernando Show? I have been trying for a year to find someone who had this breed.—Subscriber, Orange.

My list of awards at San Fernando contains no mention of White Orpingtons. If you are certain they were there you might learn the address of the exhibitor by writing E. I. Hammond, Riverside, who was in charge of both the San Fernando and the Riverside shows. At Riverside there were a few Buffs but no Whites, and they have been conspicuous for their absence for several years. I am mailing you the address of a man who used to breed them and may be able to tell you who has them.

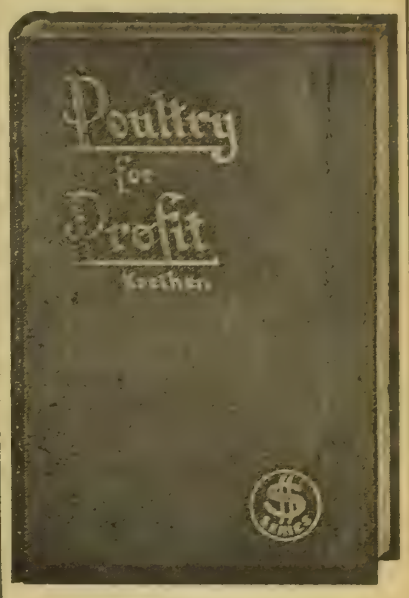
Fresh Meat or Dried?

Are fresh meat scraps from a retail butcher shop at 3½ cents per pound as valuable as commercial beef scrap at the same price?—Subscriber, Winnemucca, Nevada.

Green cut bone, as it is called, is an excellent addition to the regular dry mash of ground grains and beef scrap. You could use it once a week to great advantage, but I doubt if in the end the green bone alone is as economical as the dried meat scrap. For one thing it is impossible to know that every bird gets its share and that all have had the proportion of meat in their ration. In the second place green bone must be eaten immediately or it will become unfit for food. In the third place meat from retail butcher shops is not always fresh when you buy it. If your flock is small and you can conveniently give them green cut bone twice a week, all they will clean up in 15 or 20 minutes, you may find the green bone just as satisfactory. It is worth trying, anyway. Only be sure it is sweet and fresh or it may kill them all.

(Continued on Page 459.)

Poultry Can Be Made Profitable



Making use of information gathered from experienced poultry writers who have been guided by their practical experiences will always result in profit from poultry.

GRAIN AND FEEDS

Grain Exch. price bid Oct. 18:
Barley: 100 ton lots, Dec. del. 1.26.
Milo: 100 ton lots, Dec. del. 1.45.

HAY

Alfalfa Growers of California report:

Free movement to central markets. Stocks in hands of dealers depleted. At directors' meeting Thursday rough estimates show marketing hay available till May 1 less than anticipated, as result of unfavorable weather and low prices. In many sections the odds this summer were so much against the growers that they had no other choice but to cut down their production. This is a serious matter for growers and also for users and dealers, and reduction in milk, cream, etc., production resulting will be serious for consumers. There is only one way in which this danger can be avoided, and that is by giving growers the assurance of reasonable prices for their hay during the growing season.

There were 1,330 tons of grain and alfalfa hay received on the Los Angeles tracks the week ending October 22, with 310 tons held over.

Prevailing prices last week, delivered in the vicinity of Los Angeles:

No. 1 Dairy Alfalfa	22.00
Standard Alfalfa	17.00

Quotations by Nichols-Loomis Company. Following are prices to growers f. o. b. Los Angeles in carload lots; handling and commission must be added to obtain retail prices on new hay

Tame Oats	20.00@26.00

Gill
One-piece Piston Rings
reduce oil consumption

Because: they don't permit oil to enter the combustion chamber where it will be burned up without accomplishing *anything*. They keep oil down in the crank case and on the cylinder walls where it belongs. And at the same time Gill Piston Rings hold *all* of the gas in the firing chamber. None of it escapes past them. None of it condenses, and works down into the crank case where it thins the lubricating oil and makes it worse than useless. Gill Rings prevent that.

HAY AND FEED

Alfalfa Growers of California, Inc. report:

Prevailing prices last week f. o. b. San Francisco:

Choice Dairy Alfalfa	16.00
Standard	15.00

A. W. Scott Co. says:

Receipts past week 521 tons as compared with 1,399 tons of the previous week. The dropping off is mainly due to reduction of water shipments. Interior markets have been active and considerable quantities have moved from one section to another. Large stocks are reported in every storing center. Alfalfa continues moving actively and the dry weather has been of greater benefit to those able to harvest and market later cuttings. Nevada alfalfa will probably be coming into the markets in the near future as a large amount has been purchased by California dealers during the last week and shipment will soon be directed to California consuming points.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the markets in San Francisco (for prices to consumers, charges of switching, cartage, commission and handling expenses must be added, according to conditions).

Wheat Hay No. 1	16.00@18.00

Shipments

Shipments of citrus fruits to date since November 1, 1920, Southern California: Oranges, 40,904 cars; lemons, 11,445; total, 52,349. To same date last season: Oranges, 29,894; lemons, 8,515; total, 38,409. From Central California to date this season: Oranges, 6,658; lemons, 212; total, 6,870. To same date last season: Oranges, 5,383; lemons, 288; total, 5,671. From Northern California to date this season: Oranges, 305; lemons, 5; total, 310. To same date last season: Oranges, 261, lemons, 23; total, 284.

POULT QUERIES

(Continued from Page 457.)

Mites and Sticktights

How shall I get rid of mites and sticktight fleas on my chickens?—Subscriber, Loma Linda.

The sticktights are easily killed by anointing head and wattles with carbolated vaseline. You may have to use the vaseline several times but it will certainly kill them all in the end. Mites are not so easily eliminated. The house should be thoroughly cleaned and then every inch of the inside, including roosts and droppingsboards, painted with kerosene and crude carbolic acid, 1 part carbolic acid to from 5 to 10 of kerosene. The stronger the solution the more certain is it to kill everything it touches. If there are many mites on the bodies of the birds they are most easily killed by a thorough greasing with lard. If the weather is cold dusting with buhach powder is less trying to the birds and will probably destroy the vermin.

VETERINARY QUERIES

(Continued from Page 447.)

gist to put up the following medicine for you: One ounce aloin, eight ounces turpentine and enough raw linseed oil to make two quarts. Mix well and divide into eight doses and give each cow one dose once a day. Then get four ounces of salicylate of soda and divide it into 32 doses. Give one dose in a little feed once a day.

CROP CONDITIONS IN WESTERN CANADA

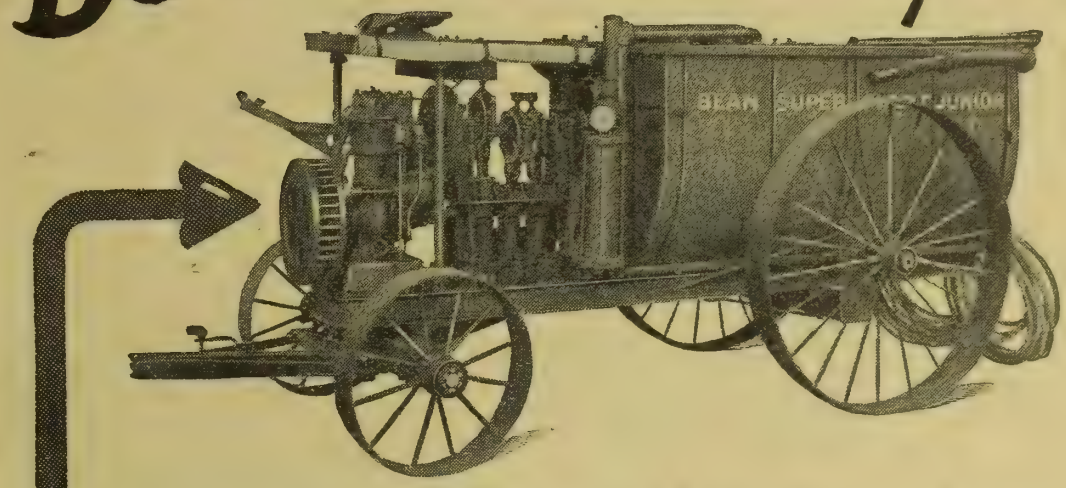
Upon his return from a 6,000 mile trip through the grain growing sections of Manitoba, Saskatchewan and Alberta, Robert J. C. Stead, director of publicity of the Canadian department of immigration and colonization, reports a somewhat mixed crop condition, varying from very light to very heavy. The lighter districts in all three provinces are in the south, bordering on the American boundary and extending northwards for varying distances. Throughout these districts the rainfall has been somewhat light and wheat crops in many sections will not average more than ten bushels to the acre. An interesting development, however, is the growing of corn in which great headway has been made in recent years. Some of the corn fields seen in Western Canada this year equal anything to be found in the East or South and give additional color to the general opinion that the corn belt is steadily moving northward.

In the central and northern portions of the provinces crops vary from medium to heavy. Along the main line of the Canadian Pacific from Winnipeg to west of Moose Jaw the average wheat yield will probably be between 18 and 22 bushels to the acre; further north and in the Saskatoon and Edmonton district and southward from Edmonton towards Calgary averages will approach 25 bushels per acre. Oats are a good crop and in some districts will approach 50 bushels to the acre while individual fields will go 75 or more. Barley also shows a good return, but there is a falling off in the acreage in flax, due largely to the fact that last spring was favorable for wheat seeding and the farmers this year have specialized mainly on wheat.

In many districts sunflowers are being grown for silage and astonishingly large crops are being produced. In one authentic instance 34 tons to the acre was the yield. Farmers are building silos and silaging sunflowers and corn. This, of course, promotes dairy interests which are active and profitable.

An important development in the agriculture of Western Canada is the irrigation areas which are being opened up in Southern Alberta. These possess a very fertile soil and attractive climate and with assurance of water will undoubtedly become important factors in production.

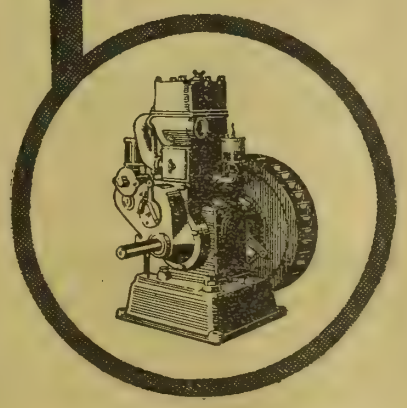
"Bean" SUPER GIANT JUNIOR sprayer



Quicker, Better Work at Less Cost

Adequate equipment is absolutely necessary for thoro spraying. It is impossible to thoroly spray a large acreage with one small pump. There is some one application on all fruit which must be made within a very limited period. Often the loss that results from failure to get the trees sprayed in time is far greater than the cost of adequate equipment.

The Bean Super-Giant Junior with its nozzle capacity of 14 gallons a minute and its 300-gallon tank, does 50% more work in a given time than the old-type outfit with its 200-gallon tank. You not only make a big saving in the cost of spraying, but you get the material onto the trees when it does the most good. Sign and send the coupon for new catalog.



The New Bean 6 H.P. Engine
A Feature of the 1922 Bean Line

Compact, light in weight, and so perfectly balanced that it runs remarkably free from vibration even under full power. Can be quickly and easily made available for other power jobs when the sprayer is not in use. Can also be used to replace the engine on the rig you now have, if you want more power and higher pressure.

what do you buy—"feed or feel"?

Even the most expert poultryman can't tell the quality of a feed simply by looking at it or feeling it. Because a feed can be light or dark, fine or coarse, and yet not vary one-tenth of one per cent in net feeding value.

That's about the least important feed test in the world—texture! For example: Some wheats grind up rather coarse — others rather fine. That makes a big difference in "feel." But does it make a difference in feed value? No!

YOU can set it down as a pretty pat rule that the "feel" of a feed means *nothing*. Texture is about the least important thing in the world when you buy feed. Color is about the least important thing, too. Feed value is the *most* important thing. For *feed value* is the thing you're buying—nothing else and nothing less.

Experience has taught us that proprietary feeds cannot be manufactured in an economical way if color and texture are strictly adhered to. A change in the manufacture of different colored corns, different colored wheats, different colored sorghums or different colored meals immediately shows a change in the color of the by-products. But here's the essential point: *there's no change in feeding value.*

So, why fuss over the "feel" of a feed when the thing you're paying for — the thing your hens are praying for — is feed value? Seasoned poultrymen who use SURELAY year in and year out know this. They know that, regardless of "looks" or "feel," SURELAY is a uniform quality-feed that makes hens pay by making them lay. And that's the only test that interests them—or you!

You can't "go wrong" on SURELAY because our daily laboratory tests make sure that every batch of the feed "goes right" in the blending. That cuts out guess-work in the making and guess-work in the feeding.

Thousands of successful poultrymen have witnessed the profit-performance of SURELAY season after season. They have quit worrying over color or texture. As a matter of fact, they have quit worrying over the feed question altogether—thanks to the uniformly high standard of Sperry Feeds.

That's why we're anxious to bring *you* into the fold. If you haven't seen our booklet, "Make Hens Happy," mail the coupon for a copy of our new edition. You needn't bother to write a letter—although we're ever ready to discuss your feed-problems with you.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

If among the more than 40,000 Cultivator's weekly circulation any fail to find any article they desire to purchase advertised in the Cultivator's columns, a special request is extended you to let your wants be known to the California Cultivator and we will place you in touch with proper parties.

EDITORIALETTES

It takes a wonderful imagination to get even a faint idea of the glories of the scene spread before the eyes in the illustration on the cover of this issue. There were reds, yellows, whites, blues, all the primary colors, and, it seemed, all the various shades worked out in designs like a great tapestry. This was only a small part of the show of flowers made by Southern California nurserymen in honor of the coming of the annual convention. Much of the glory of these gardens may yet be seen by a visit to Exposition Park, Los Angeles.

* * *

Speaking of the Flower Show, Director Hecke said that he had attended other shows in Covent Gardens, Brussels, Paris and other European cities but had never seen the equal of the show just closed.

* * *

If the ideas, or lack of them, on this page this week appear to be in a smudge of sand and plaster and dust generally, and confused by the sounds of saw, hammer and some expressive language such as one hears when the stove is being put up, it may be set down as the result of the Cultivator being on the move. We are in our new quarters, Publishers Trade Building, 317 Central Avenue, near Third Street.

* * *

We say we are now "in" the new quarters, but there is such a mass of confusion that we feel the physical accomplishment of getting out the paper this week is something for which we should have great credit regardless of any worth of the matter contained in the paper. There are some good things, however, echoes from the conventions held during the last few days.

* * *

The Cultivator has not moved many times in its life and hasn't the habit sufficiently developed that the moving is done without great travail of soul and lifting of furniture. Another week and we hope to have some semblance of order and a more orderly appearing paper so that we may say to our friends: "Our latch string is out and we invite you to drop in and help us dedicate our new quarters."

NEXT WEEK

It is hard to say just what we will be able to give our readers next week, but one thing is sure that we have in hand two valuable papers and discussion on them, given on Tuesday forenoon of Convention Week. These have to do with the restoration of the run-down orchard, both deciduous and citrus. As one speaker expressed it at the convention, many people consider the restoration of an orchard from the standpoint of grafting of monkey glands, but some good, hard common sense discussion of building of soils and handling of trees was given, and we think it will be conceded that those articles will give to next week's Cultivator a value to justify a year's subscription.

Another article which may be used next week, and if not then, very soon, is one which discusses pruning of walnut trees. It is one of the most complete discussions of the subject we have yet seen, written by one who has made wide observation.

* * *

"Autos and good roads give us a chance to make four times as many friends as our fathers did." Likewise they give us opportunity to get farther away from distribution points and utilize lands which years ago were considered out of reach excepting for stock range or larger grain farming.

* * *

The Ohio University is recommending "seven gallons of water outside and seven glasses inside every day." Very good so far as it goes, but it appeals to us that the seven gallons is a little bit shy and besides all of us should drink more than we do.

DAIRY COW COMPETITION

The state dairy cow competition has now been conducted a year and a month and is entering upon the home stretch. We believe it has proved a wonderful uplift for the dairy industry. Because of it hundreds of cows have ceased to be dairy cows and others of real worth as producers have been given their rightful place.

One of the features of the contest has been the Cultivator's offer of $25 each month to the best five grade cows in a herd during that month. Regarding this feature of the competition Prof. Woll writes:

"The prize offered by the California Cultivator for the highest producer of butter fat of five grade cows in the herd was won for the second time by Nate Hauck of Alton (average milk 1,216 pounds, butter fat 59.16 pounds, 126 days from calving). These cows won against 20 similar groups of grades competing for the prize during September. The prize has now gone six times to both Humboldt and Los Angeles Counties, San Joaquin County being the only other county in the state where prize winning grades are located."

Other dairy counties should claim some of these purses. We're watching the finish. The north and south are now equal with San Joaquin on the center of the teeter.

USE OF MILK DOUBLED

Forty-five gallons of milk is used by each person in the United States annually, according to estimates made by the dairy division of the United States department of agriculture. This estimate refers to whole milk and does not include that which is consumed in the form of ice cream, cheese and butter. The amount is about twice as much as that used in 1890, when the per capita consumption was approximately 22 gallons. The dairy specialists point out that the increase in the use of milk in the last 30 years is as great as that in the preceding 280 years.

The present day consumption of milk in the United States, they say, is equal to about one pint per day, or as much as two small glasses. That is not a great amount when it is known that it includes not only the milk that is used for drinking, but also that used in cooking. This is a small amount compared to the per capita consumption in some European countries. In Sweden and Switzerland, for example, nearly 70 gallons are used by each person annually.

A high value has always been placed on cows in many European countries, and history records a campaign conducted by Julius Caesar in central Europe where he found German tribes living almost exclusively on milk. In order to provide pastures for their cows they forcibly resisted the settlement of any people near them.

In relating the growth of the dairy industry in this country, the department specialists say that in pioneer days each family kept its own cow. The denser the population became the more important it was to have a well regulated and ample commercial supply of milk. Gradually the number of cows increased, and in time a dairy business grew up in various sections. The development of modern methods in the distribution of milk, with economic and sanitary handling, has been closely accompanied by the larger use of this food, they say.

Much of the milk now used in cities comes many miles, and recently improved methods have made it possible to ship it for long distances in refrigerator cars. At the National Dairy Show in Chicago in 1919, milk shipped from the Pacific coast took first prize in the market milk competition with the highest score ever given to milk in recent years.

Cities have always used a smaller amount of milk in proportion to the number of people than general farming communities, the statistics show. For example, Philadelphia reached the rate of 23 gallons per capita in 1905, which was 15 years later than the country at large reached a consumption of 22 gallons. There are, however, many agricultural and non-agricultural rural districts where cows are not kept and where modern methods of milk distribution are not equal to most cities. The people in such places have to depend on canned milk of various kinds, and this, the dairymen say, is an exceedingly valuable means of supplying a need which 20 or 30 years ago could not have been supplied at all.

NO STRIKE

The strike is declared off before it started, which is fortunate for all and especially for those who would have caused the producers of the country untold losses. For once the would-be strikers had absolutely no support from the people. They were so everlastingly wrong in their contention that not a single force outside their own membership—and as it has finally proved only a small portion of that—stood squarely for the great economic loss.

NURSERY INDUSTRY

A fitting memorial for the meeting of the California Association of Nurserymen to be held next week in Los Angeles is "California Nurserymen and the Plant Industry 1850-1910." This is the gathering together and publishing under one cover of a series of addresses delivered before the California Association of Nurserymen from 1916-1920, by Edward J. Wickson. Prof. Wickson's connection with California horticulture is not quite as extended as the period covered by his addresses but he has been in California since 1875 and his connection has been so intimate that he is abundantly qualified to give us information regarding California's horticulture, and this makes this booklet almost invaluable.

MOST DIVERSIFIED

Of all states California is the most varied agriculturally. Within her boundaries are grown 102 distinct classes of soil products, according to the lists of the last census. Other states such as Illinois and Iowa have large departments of agriculture and efficient agricultural experiment stations, but their problems are simpler because the number of their important agricultural products is less. For example, in Iowa, which leads all states in the total value of her agricultural products, the census lists 76 classes of such products, or 26 less in number than are listed for California. The extremes of climate and other agricultural conditions which make California adaptable to such a variety of products also increase the difficulties of efficient supervision, standardization and experimentation. The agricultural experiment station is carrying on 146 experimental projects ranging from the Imperial Valley 400 miles south of Shasta County and 200 miles north, while the department of agriculture finds it necessary to meet every ship that touches our shores from foreign or inter-territorial points; every rail shipment of agricultural products coming across the state line for protection, and standardizes the vegetable, fruit and animal industry over the entire state for our commercial benefit. The diversity of California's agriculture is a continuous source of wonder to every visitor.—O. W. Newman.

BACK ALMOND GROWERS

Senator Johnson telegraphed Manager Tucker of the California Almond Growers Exchange that 16 senators representing eight states west of the Rockies have pledged themselves to a five and 15 cent tariff schedule on almonds. Advices to the Almond Growers Exchange from Washington indicate that there is little hope for the enactment of a tariff bill before next February. Hearings are scheduled to resume as soon as the senate passes the revenue bill.

California Cultivator

Vol. LVII, No. 19 Los Angeles, November 5, 1921 One Dollar Yearly

California's Greatest Livestock Effort

By R. P. Royce

TIME is usually reckoned the factor most essential to the development of great institutions, and for the most part the American public has been inclined to wait until our institutions, great men and their works, have passed that acid test and accumulated a bit of age before pronouncing them great. And all too often have they been inclined to withhold encouragement too long. Not so with the California National Livestock Show held at San Francisco October 22-30. This lusty infant livestock institution made its bow to the California public in a manner that was a surprise to all and with a finished torch that at once evoked whole hearted, unstinted and enthusiastic praise from exhibitors and visitors alike.

When the gates opened there was disclosed what is generally conceded to have been the most satisfactory livestock show ever held in this part of the west. True, it looked a bit temporary, housed as it was in five mammoth tents, but once inside and viewing the long rows of stalls and pens, each one filled with a representative of one kind or another of our improved breeds of domestic animals, the sense that it was a young show and wavering between permanence and oblivion was lost to all, and in its place came the realization that here was one of the most permanent and essential industries of the commonwealth, yes of the world, in open and convincing display for all to see and learn from and ponder over. We don't know yet whether the show will be declared a financial success—probably not, but we do know that the show accomplished everything its backers hoped. The California National Livestock Show first of all proved the contention that the livestock industry of this state is one of fundamental character, that California and her sister states are not only great potential breeding grounds for high class livestock, but that that situation prevails at the present time and is a fact that holds unlimited promise to the future welfare of California economically and socially; economically, because the fertility of our soil is dependent upon livestock, and the more efficient the livestock the more successful our agriculture; socially, because better livestock makes for better men and better women. With good livestock comes prosperity, and with prosperity comes contentment, both important factors in the upbuilding of any community. Then too, the show demonstrated to the business interests of San Francisco that such a show can be made a valuable asset to the city that sponsors it and that the livestock people as a whole are ready and willing to do their part to make future shows a success.

Probably never before was such a show developed so completely by the livestock interests. With minor exceptions all that the directory, everyone a livestock man, asked of the city was its moral support. They said to San Francisco: "First of all we want to show you city folk the sort of a show we feel is needed. We are willing to assume complete responsibility for the detail management and the financial support of this initial show. If you are impressed with our efforts we intend to ask you to come in with us and help put across such a show as California is entitled to and such as we know can be developed." The livestock fraternity has done its part and in a fine, efficient, and dignified and businesslike manner. It now remains to be seen what the city folk will answer.

The writer has been going to livestock shows for a good many years but he does not recall attending any show that seemed to be so near a necessity, that was better managed, or one wherein the spirit of teamwork and rare sportsmanship was so in evidence. One enjoyed every minute of the day and evening, and when he filed out the gate at night he felt that he had enjoyed a rare privilege of association with a group of men representative of the best in life. It is that feeling that makes it certain that sooner or later, probably next year, San Francisco will say to the livestock men and women of this state: "We are ready to help in a material way to make this a great annual exposition and to house it in quarters in keeping with the city and the industry it serves."

The detail story of the show is written in other columns wherein is described the various classes. Aside from the contests in the judging arena there is not much more to refer to. There were no "free attractions;" the voice of the ballyhooer was conspicuous through its absence; no long rows of flim-flam games greeted one; it was just a big, fine, dignified livestock show.

Before taking the show up in detail it is altogether proper that special tribute be paid the active management, and to neglect to refer to the work of the president, C. N. Hawkins of Hollister, would be an unforgivable oversight. The livestock industry of California can count itself fortunate indeed to number within its ranks such a man. Broad-gauged, clear visioned, determined, to him more than to any one else is the success of the show due. For months he has given of his time and money (and of the latter no one will ever know how much, because Hawkins is a modest man) that the show might be held. At times when others faltered it was Hawkins who carried the day, and while he may be poorer in vitality and purse he can count himself rich in the esteem freely accorded him by the livestock world and the knowledge of a work well done. Assisting Mr. Hawkins and at all times in harmony with him was C. R. Thomas, the manager, upon whom fell most of the detail work. To mention others who have contributed to the success of the first California National Livestock show would be to call the roll of the entire board of directors and each and every exhibitor.

Another fine feature that deserves special mention was the way in which the management placed the show before the school children of San Francisco. More than 42,000 tickets were distributed to the various schools through the generosity of leading San Francisco banks and merchants, and throughout the week, through the cooperation of the city school officials, these 42,000 children visited the show accompanied by their teachers. Safe it is to say that the average San Francisco school boy and girl has a new and wholesome idea as to where their milk and meat and clothes come from.

The outstanding feature of the exhibit was the remarkable showing made by the Hereford and Shorthorn breeders. Each division set a new record and in both numbers and quality need offer no apologies to any show.

The dairy cattle division was not as strong as it might have been but it is certain that with future shows this weakness will be corrected. At that it must not be understood that the dairy cattle were lacking in quality.

The horse show was entirely creditable and the show of sheep particularly good.

The Herefords

Honors of the show went to the Hereford breeders by virtue of having the largest entry list. One hundred and sixty-odd head were entered in the regular classes and in point of numbers and quality entitled the exhibit to take high rank among the leading shows held anywhere this year. Such a notable showing, representing the best of six states, is highly significant of the rapid progress the Hereford breed has been making in this state during the last few years and came as a real surprise not only to the visitors from the east but the members of the Pacific Coast Hereford Breeders Association. Nearly every class, especially the young classes, was well balanced from head to foot, and it can be said that mighty few shows can boast of fewer 'tag ends."

John W. Van Natta of Lafayette, Indiana, was the judge.

Six aged bulls led off the judging and as soon as they had lined up it was apparent to the ringside that the massive Roehampton 34th, carrying the Rule colors, was the outstanding top. His impressive front, great scale, even lines and good balance, coupled with a nice job of fitting, placed him above McNerney's son of Beau Blanchard that was lacking a bit in quarters and not so close to the ground. The other three places were filled with bulls bordering on the plain kind.

Eleven two year olds presented a rare sight for California Hereford men. The Cook herd from Montana stepped in to first place with Panama 110th, a bull of scale and nice lines but a trifle more upstanding than some of the others that stood close to him. He is a good bull at that and went through to the senior championship over the aged Rule bull. In second was a Colorado entry rather plain headed but in sufficient flesh to go above the Bunting entry. Had the third bull carried more condition it is altogether probable that he would have landed the top honors of the show. He is especially good in front, strong in the heart, level in his lines and good through his quarters. Cook was fourth and Briggs fifth.

Cook again headed the senior yearlings with another Panama whose depth and thickness and bulging quarters carried him above an attractive youngster from the Barngrover herd that needed but a bit more spring of fore rib to set him ahead. The Thiessen bull went above the Cable entry and smoother covering, largely because of his greater scale, though he lacked the head and balance of the latter. McNerney was fifth with a smaller bull, a bit weak in his fore rib and a trifle plain at his tail.

As at Sacramento, the grand champion of the show was developed in the junior yearling class and was the same youngster from the Cazier herd. This calf is one of the attractive ones of the year. Aside from a little slackness at the heart there is little to criticize, but he needed every bit of his quality and splendid covering to win over the very short aged calf shown by Baldwin. Give that youngster an even break in age and he would make the best of them step. Cook was third and Howard and Thiessen brought up the rear.

The eight senior calves fell in behind a growthy entry from the Cook herd whose greater size was about all he had to recommend him over the low set, well covered calf of more pleasing type shown by Cazier. Jacks was in the third notch and John Bunting, Jr., was fourth with a calf of more scale than the one below him.

The 14 junior calves augur well for future shows. They were a nice lot. Briggs won rather handily with a calf of more size and condition than the others.

A rather unusual class was provided at this show; the same being for an aged cow showing with a calf at foot. The Shorthorn classification calls for such a class but this is the first time the Herefords have followed the plan. Miss Joy from the Cook herd was quite outstanding and annexed another blue to her already long string. McNerney was second and Barngrover third.

Following the above class came the aged dry cows, and five good matrons answered the call. Bocaldo Beauty, the remarkable cow from the Jacks herd, was the class of the lot and as on many former occasions she was sent to the front. There is little question but that she is a remarkable cow and so far as the ringside felt she was the best Hereford female at the

(Continued on Page 482.)

Agricultural News Notes of the Pacific Coast

Northern California

Eastern Placer County is shipping out persimmons.

Rice growers are complaining of damage to their crops from ducks.

The end of the grape shipping season at Lodi shows another shortage of cars.

Eden and Washington Counties in Alameda County have formed a country chamber of commerce.

The new state highway from Sonoma to Santa Rosa has been mapped out by the state highway commission.

The plant of the California Prune and Apricot Growers at Brooklyn, New York, has been doubled in capacity.

The first cockerel sale held by the Sonoma County farm bureau resulted in sale of 42 birds for a total of $1,920.

The petition for formation of the Los Molinos irrigation district has been denied by Tehama County supervisors.

The bean crop of the Sacramento Valley is estimated at about 15 per cent less than at the beginning of the harvest.

Average butterfat yield from tested cows in the Sacramento-Yolo association this year showed an increase of 24 per cent over last year.

It is estimated that two-thirds of the California potato crop is still in the hands of the growers who are holding for better prices.

Because of continued hot weather the Stockmens Protective Association of Alameda County has determined to retain several fire patrolmen on the ranges.

The close of the grape shipping season in the Lodi district shows almost frantic activity among buyers who have been holding off expecting to beat down prices.

The Placer County chamber of commerce has asked the supervisors to call an election for special bond issue for the purpose of building laterals to the state highway.

The Sacramento County farm bureau held its annual picnic and election at Davis, October 15. Fred Schmidt of Mills was elected president. Mabel Townsend of Sacramento is secretary-treasurer.

The Pacific Pigeon Fanciers Club was formed last week in Oakland. As an initial activity the club plans to enter several hundred birds in the Los Angeles Pigeon Show to be held the first week in December.

There is a proposition to build a bridge across the bay from Mulford's Landing to the San Mateo and San Francisco County lines with a main span of 2,000 feet across the deep channel and a 140 foot bascule in the middle.

A meeting of all interested in growing peas was held at Hayward, October 26, under the auspices of the Alameda County farm bureau. E. O. Essig, entomologist of the state university, was present to discuss control of pea aphis.

At a recent meeting at Willows over 25,000 acres were signed up in the rice growers' association. This is the new association formed with Ralph W. Merritt as president and manager and which has $1,000,000 of War Finance Corporation funds ready to loan to members.

Central California

Springville, Tulare County, reports coyotes over-numerous and a menace to poultry.

Trainload shipments of feeder cattle are being received at Oakdale, Stanislaus County.

Lindsay, Tulare County, expects a navel orange crop at least 400 cars heavier than last year's.

The Fresno County farm bureau held its annual picnic and election at Kearney Park October 27.

Fresno County has filed several suits against property owners for payment of expenses of rodent eradication.

Thousands of cattle are being driven down from the mountain ranges to winter feed lots near Raymond, Madera County.

Modesto grape growers report sales of wine grapes at $125 a ton in the Oakland market. They expect to see Zinfandels bringing $130.

San Joaquin County farm bureau will soon start a campaign to enlarge its membership. The annual dues have been raised from $2.50 to $5.

The Fowler, Fresno County, Square Deal Club reported at its first meeting that two crops of raisins had already been saved to the association.

Water rights on the Merced river have been granted the Merced irrigation district, which will supply water to 189,000 acres of land surrounding the city.

Citrus growers of southern Tulare County met last week at Ducor and formed a citrus club. Frank Daybell was elected president and J. E. Blodgett secretary.

Application by the San Joaquin Light and Power Corporation for revision of rates will be heard by the state railroad commission at Fresno on December 13.

Secretary Murdoch of the California Associated Raisin Company has called upon all members to respect their contracts. There have been numerous reports of illegal deliveries of raisins to independents.

At the last joint session of directors of the Turlock and Modesto irrigation districts reports were received of satisfactory progress on the Don Pedro dam; 20 carloads of gravel per day is the schedule.

A milk contest will be held at Bakersfield high school November 5 in connection with the Kern County high school boys' agricultural class fair. Scoring is open to any registered dairy in Kern County.

In furtherance of the fight against contract breakers among the membership of the raisin association the farm bureau of Centerville, Fresno County, met October 28, to organize a branch of the "Square Deal Club."

The annual meeting of stockholders of the Central California Citrus Exchange was held last week at Lindsay. Frank Hostetter of Lindsay was elected president and A. S. Rider of Lindsay, secretary manager.

A five day tractor school will be held at Modesto high school, November 14-19 under direction of the state university. Enrollment is limited to 60 men who own, operate or are directly interested in tractors. Enrollment fee is $2.

Southern California

Chino, San Bernardino County, held a community fair November 5.

Work is being done on the state highway from Indio to Coachella.

Foggy weather has delayed bean threshing in the Carpinteria section.

Bonds of the Blythe irrigation district will be offered for sale Monday, November 7.

Herbert T. Wilder has been appointed farm adviser of San Bernardino County.

Encouraged by large attendance the managers of the El Centro fair are already making plans for 1922.

Engineers of the state highway commission are running surveys east from Trifolium to Westmoreland.

Yucaipa Valley is marketing some of the highest colored, best flavored apples that she has ever produced.

Herbert T. Wilder has been appointed farm adviser of San Bernardino County. He will take up his work November 15.

There was a representative gathering of fruit growers at the state fruit growers convention which was held in Los Angeles last week.

Horticultural commissioners from practically every county of California met in annual convention at Los Angeles last week.

The Indio Date Festival brought out an almost continuous procession of automobiles from various parts of California to the Coachella Valley.

Palo Verde cotton growers will send a delegate to the annual meeting of the American Cotton Association in Alabama the latter part of this month.

The Dahlia Club of Los Angeles held its show at Exposition Park, in conjunction with the California Flower and Horticultural Show, October 20-23.

The Mojave Valley Fruit Association has decided to build a packing house at Victorville. There is also talk of establishing a by-products plant.

Bids are to be received by the state highway commission for the construction of highway from Palm Springs along the northern side of the Southern Pacific railway to Indio.

A grape growers short course was held at the Brawley school November 1, at the El Centro high school November 2. Professor Bioletti of the state university was the principal speaker.

It is announced that the Orange County farm bureau has joined ranchers of Villa Park, El Modeno, Olive, McPherson and Tustin in their fight against the proposed Southern Pacific branch line.

San Bernardino County is finding difficulty in enforcing the over weight truck ordinance, because of the large number of trucks which come in from other parts of the state which do not enforce loading regulations.

At the recent conference of supervisors of Southern California counties held in Los Angeles it was reported that San Diego and Imperial Counties would adopt immediately the same truck load ordinance now in effect in Orange, San Bernardino and Riverside Counties and that probably like action would be taken by Los Angeles, Ventura and Santa Barbara Counties.

The Coast and General

Colorado potato shippers are also embarrassed by lack of cars.

New York state dealers are paying growers $1 a bushel for potatoes.

Large quantities of honey in central states are going direct to the consumer.

30 per cent of the Jonathan apples of the Okanogan Valley of Oregon have already been shipped.

A good demand for premium staple cotton is reported at New Orleans and a fair demand at Memphis.

The Northern Pacific Railroad announces that it will continue its reduced rates on apples after December 31.

The apple crop of Washington is now estimated at 20,474,000 bushels, about 50 per cent more than last year's yield.

Fourteen hundred farmers of Maricopa County, Arizona, are affiliated with the national farm bureau association.

Oranges are coloring very slowly in the Yuma Valley of Arizona but are very sweet. Salt River Valley grapefruit is now in the local market.

A quarantine against shipment of sweet potato plants, cuttings, etc., has been issued by California against Southern and Eastern sections of the country.

According to carefully gathered statistics the production of sugar in Germany the present year will be 50,000 tons more than last year when 290,000 tons were produced.

The October 1 crop estimate of the department of agriculture shows the cranberry crop in the leading producing states much below that of last year, which was itself a short year.

Exports of citrus fruits from Cape Town, South Africa, will amount to over 250,000 boxes. It is stated that twice this amount would have been shipped if transportation space had been available.

A new rate of $1.25 per box for apples shipped in refrigerated space from Seattle, Washington, to north European ports by way of the Panama Canal has been announced by the Royal Mail agencies.

The annual meeting of the American Pomological Society will be held at Toledo, Ohio, December 7 to 9 and exhibit of fruits will be staged in conjunction with the National Farmers Exposition held at the same time and place.

Something over a half million dollars has just been distributed by the U. S. forest service to states in which there are national forests. California received over $185,000, Arizona nearly $60,000, Oregon nearly $103,000, Washington $77,000.

A Holstein breeders organization to be known as the Western Holstein Breeders Association was organized at Modesto last week. The plan is to take in breeders in Oregon and Nevada as well as California. A. M. Bibens of Modesto was made temporary president.

Growers and shippers of the Wenatchee Valley of Washington plan to start legal proceedings against the Great Northern Railway because of failure to supply cars for apple shipment. Growers say there are 12,000 carloads ready for shipment and only 1,000 cars in sight.

Some of the Attendants at the Fifty-fourth State Fruit Growers and Farmers Convention at Exposition Park, Los Angeles

Fifty-Fourth State Fruit Growers Convention

By C. B. Messenger

A SOLID week of conventions closed with many expressions on the part of attendants in effect that it had proven a most profitable time. It is possible that there was no action so outstanding in importance that it will rival the initiation at the Chico convention of the legislative committee which has proven of such great value in securing laws which do justice to the agriculture of California. The work of this committee has been so effective that one entire day was given to reviewing it and its program for the future. A part of the day's program was the hearing of the report of the transportation committee appointed at the Fresno convention. The committee is composed of C. E. Virden, Sacramento; G. H. Powell, Los Angeles; A. B. Humphrey, Mayhew; C. M. Brown, Redlands; J. L. Nagle, Sacramento; Thos. E. O'Neill, Los Angeles; E. Y. Foley, Fresno; A. M. Pratt, Redlands. Following the report of this committee the feeling was expressed that its work was not yet completed and that it should be continued. A motion to that effect was unanimously carried.

Judge Willis Morrison and Colonel Harris Weinstock reviewed legislation, state and national, favorable and unfavorable. Colonel Weinstock closed his address with a series of resolutions, full text of which appeared on page 439 of the last issue.

But before touching more upon even the high spots of the convention it is proper to give a word as to the garden fairyland in the center of which the convention was held. The meetings were in the assembly room of the state exposition building at Exposition Park, Los Angeles. Many years ago what is now Exposition Park was known as the Sixth District Fair Association, and at the annual "fair" the ponies and the trotters gave the principal part of the entertainment and the instruction. Those were the days when Lucky Baldwin, L. J. Rose and many other lovers of the turf were breeding up some exceptionally speedy ponies.

Later the Sixth District Fair Association terminated its activities and the lands which had become encircled with residences of the city of Los Angeles were turned over to the state of California. At a meeting of the State Fruit Growers Convention held in Sacramento some dozen or more years ago Mr. Bowen of Los Angeles made appeal for a resolution supporting the effort of Los Angeles to have the state construct a $250,000 building which should be maintained as a permanent horticultural and agricultural exposition of productions of California. The Sacramento convention passed the resolution unanimously, and later a session of the legislature made appropriation of a quarter of a million dollars, a part of which was afterwards returned to the state treasury because of the economical management of the committee in charge of the building. The structure, however, is a most beautiful one and is a monument to the wisdom of the legislature in making this appropriation. On the same grounds was later constructed a building for armory purposes of the National Guard of California.

In that building was held the nurserymen's convention, an account of which appeared in last week's Cultivator. At the far end of the great court which during this convention was filled with literally millions of dahlias, Los Angeles has constructed a building which is used for a museum and art gallery. W. N. Harris represents the state of California in managing the affairs of the state in the buildings and grounds. We asked him as to the activities conducted in the park. He said:

"Exposition Park, which has come to be known as one of the most interesting and beautiful of the recreational resorts of Los Angeles, has for a number of years offered many varied attractions for the pleasure, entertainment and education of home people of the city and thousands of tourist visitors. In addition to the permanent attractions to be enjoyed here, the park has afforded a charming setting for many fairs, pageants, community entertainments, livestock shows, and public gatherings. It is doubtful if there has ever been created a more gorgeous exhibition of growing blossoms than that which now fills the sunken gardens. Where, excepting under the kindly, sun-blessed skies of California, could such a wondrous result have been achieved in scarcely more than four months' time? By what necromancy were numberless plants made to bloom out of season and all of them, thousands upon thousands, to bloom in such profusion at exactly the right time? The result was achieved through the application of exact horticultural methods, plus a lot of hard work, notwithtanding which, to one who has watched the development of this floral wonderland, the word "magic" is constantly suggested in contemplation of the achieved result.

"Exposition Park is owned by the state and is in custody of the Sixth District Agricultural Association. Excepting the state exposition building, the park is under lease to the city of Los Angeles, the city park department maintaining the grounds. The Exposition building is maintained for the benefit of the entire state as a permanent exposition of the resources and industries of California. This institution provides, at the most logical place, an exceptional facility and opportunity for publicity and educational work. The exhibits shown and the publicity handled at the information bureau are representative of every county in the state. Space is provided for individual county displays and many of the counties are availing themselves of the opportunity to reach thousands of newcomers to California every year. Motion pictures illustrative of conditions throughout the state are shown daily in the assembly room. The services offered at this building are entirely free. The average yearly attendance of visitors is something over 250,000."

But coming back to the convention, there was not a dull moment. The nurserymen and avocado men had finished their sessions the Saturday preceding Monday morning, a time seldom chosen for convention beginnings. Several hundred filled the hall. These were mostly real producers, with a sprinkling of county horticultural commissioners and representatives of the University of California and the state department of agriculture. Several representatives of the United States department of agriculture were also frequently heard on the floor. Private Secretary H. H. Kinney, representing Mayor Cryer of Los Angeles, gave most hearty welcome to the city which includes within its 340 square miles, the greatest amount of farming land of any city in the world.

Mr. Hecke responded with fullest appreciation of the cordiality of the welcome, after which he took up and read his

Annual Report

In greeting the farmers and fruit growers at this 54th convention, it is with great pleasure that I am able to bring to you a message more hopeful for the immediate future than was possible at the Fresno convention last season. Due to the steadfast and well balanced efforts of the California farmers more has been accomplished than would have been thought possible. Banking and business interests all over the country are now in closer touch with labor and with the farming industry. Through cooperation, through standardization and better marketing the farmers and fruit growers are getting reasonable prices for their farm products—and instead of business being on the down grade, we find it is looking toward steady improvement.

As an accurate index to the progressive development of California we have but to turn to the census and other statistical returns for the decade of 1910 to 1920. Statistics, assembled by the cooperative crop reporting service of the state department of agriculture and the United States bureau of markets and crop estimates indicate that the total number of farms in California during the ten year period has increased from about 88,000 in 1910 to about 118,000 in 1920. The value of all farm property has increased in the same period from a little over one and one-half billion dollars to the huge sum of about three and one-half billion dollars—an actual increase of over 112 per cent.

These figures are startling enough in themselves, but when we attempt to estimate the probable increase in production during the next decade we are indeed surprised, if not somewhat alarmed. Based on present plantings in the deciduous fruit and grape industries, for instance, it is probably fair to say that the commercial output by the year 1930 will have increased three and even four fold. Such a tremendous production will demand the highest type of organization, the greatest possible efficiency in handling and marketing methods, and assistance from the state department and from the college of agriculture.

Conclusion

The progress made by the department of agriculture is very gratifying, and has met with the general approval of the agricultural interests It would, however, have been impossible for the department to have developed to its present state of efficiency had not Governor Stephens and the legislature stood solidly back of it in supporting its needs, by providing a generous appropriation and by his approval of the many bills that were submitted to him through legislative action inaugurated by the agricultural legislative committee. It is not saying too much when the claim is made by those who have watched the development of the department that its being and its progress is primarily due to the energies of Governor William D. Stephens.

The continued success of the department of agriculture in giving service to the fruit growers and farmers of the state depends, in addition to the governor's support, upon the individual backing of the fruit growers themselves and upon the continued interest and advice of the agricultural legislative committee. With the many difficult problems which we must face today and in the future, everyone must put his shoulder to the wheel if we are to maintain the high position we now hold in the rank of the agricultural states of the Union.

Gov. Stephens at Banquet

Tuesday evening's banquet at the City Club was attended by nearly 300. The governor said in part:

Honored am I by the opportunity given me to talk to you following a program filled with so many interesting debates as have engaged you today. I do not know that ever I have seen a program more replete with discussions of intense interest to fruit growers and farmers. You are to be congratulated

on the work of your program committee.

I come tonight as fellow citizen and as governor of this great state, to speak to you on "Agriculture as the Basis of Prosperity" and to touch briefly upon some other points of interest to all good citizens of California.

Born in a small country town in Ohio, I early learned to shock corn and to shack it too. I have walked all day behind a two-horse plow and have cut cord wood the whole day through. As a lad I "carried sheaves" in the harvest field and when grown up, I took my turn under the tail end of an old fashioned threshing machine actively at work. (I can feel the chaff and beards yet as they wriggled downward beneath my calico shirt.) I have attended many corn huskings, searched for and found a few red ears and claimed the reward due such perseverance.

As a boy, I raised a pig from infancy to hogdom—400 pounds he weighed when my father decided it more economical to kill than to sell him. The lard was scorched and the meat spoiled in the curing, and I must confess that I did not feel unduly sorry.

With all this experience, and more, is it strange that ever since I have been interested in everything done on the farm. Throughout my Washington service as congressman from the very district in which you are holding your convention I voted and worked for "farmer legislation" and during my service as chief executive of this state I have had constantly in mind the subject assigned me tonight, and which I always have believed to be founded upon fact: "Agriculture is the basis of all our prosperity and if we would have the rest of our people happy and contented, we must see to it that he who produces from the soil is successful in all his undertakings."

If the farmer is prosperous, then the wage worker, the manufacturer, the merchant and the banker is in turn provided with work, with something to make, with a market for his wares, and with adequate security for loans.

If the farmer has fair crops which he can sell for more than cost you will see on his face the smile that will not come off, and when he drives into town, whether it be on a truck load of potatoes or prunes, onions or oranges, hay or hogs, cantaloupes or cattle, cotton or wool, pears, peaches or grapes, the rest of humanity is there to meet him and with arms extended wide they welcome him to all the joys that follow prosperity.

Organization has been of incalculable help to the California farmer, and cooperation is the slogan with which he advances in the competitive battle he wages in markets of the world. In every way possible I have tried to help the fruit growers, the farmers, the cattlemen of California, and as long as I am the governor of California, I shall show my sympathy through actual demonstration.

Two years ago, as a part of our reorganization plan we consolidated many actvities having to do with agriculture, horticulture, cattle raising and kindred industries into one great department of agriculture. The increase in efficiency was so great and so marked as to warrant the further inclusions made this year. Today California has the best state department of agriculture to be found in all the United States.

Permit me to read the following letter recently received: "I am taking this opportunity to convey to you a knowledge of the expressions of high esteem I have heard of the state department of agriculture of California, while on an eastern trip.

After the meeting of the executive committee of the American Farm Bureau Federation at Springfield, Massachusetts, I was assigned to a speaking tour through New Hampshire, Vermont, Massachusetts and Connecticut. While in these states I came in contact with their leading agriculturists, and all were well acquainted with our state institutions and were high in their praise of the efficient work of the Calforna department of agrculture. They look upon the work of this department, under G. H. Hecke, in quarantine, pest control, etc., as the outstanding type of its kind in the United States.—W. W. Walker, Executive Committee, American Farm Bureau Federation."

It is my desire that all of the Great West, and particularly California, shall be developed properly, that the man or woman who is invited to farm our lands shall actually have a fair chance to win. We must provide that absolute necessity for our lands, water. And not only for the new settler must water be at hand, but an abundance of water must be made available for those who have been successful on a limited area and whose success warrants the intensive cultivation of more and more land.

There remain 5,000,000 acres possible of irrigation in California. This area is an empire in its extent and in its possibilites. More can be produced on this area alone than can be raised in the whole area of some other states—if water is provided.

Water on every acre and power for every purpose must be the slogan of every lover of the Golden State. There is enough of both going to waste or lying latent in the hills. You all are acquainted with the power of a horse, but do you realize that it would take 10,000,000 horses to furnsh power equal to that asleep in the mountains of California?

The last legislature passed a series of soldier laws, among them bills appropriating $3,000,000 to be loaned to California boys who enlisted in any of our wars and who still reside in this state. In November, 1922, all voters will be called upon to authorize an addition of $7,000,000, making in all $10,000,000 which California proposes to lend to her soldier lads to assist them in the purchase of homes and farms. They are your own boys, they belong to California, and when we help them to own homes and farms we cause greater interest in California's development and in a larger production of fruit, vegetables, grain and livestock. When we help California's soldiers, sailors and marines we help ourselves.

May I not ask you all to assist in educating Washington and the East as regards our Japanese problem. Washington is not fully informed and the Eastern people generally have even less information concerning this all important question. Japan is a great nation with a wonderful history and has made remarkable progress entitling her to a place among the Great Powers of the World—but she is not entitled to absorb America or any part of it.

California is for those whom we can assimilate—and immigration to our shores of any people who can not possibly become citizens of America must stop. The necessary legislation is almost wholly federal, so help us to educate our national government at Washington.

All the events of the convention would fill a book. A part of the "book" we have in hand and will use from it from time to time.

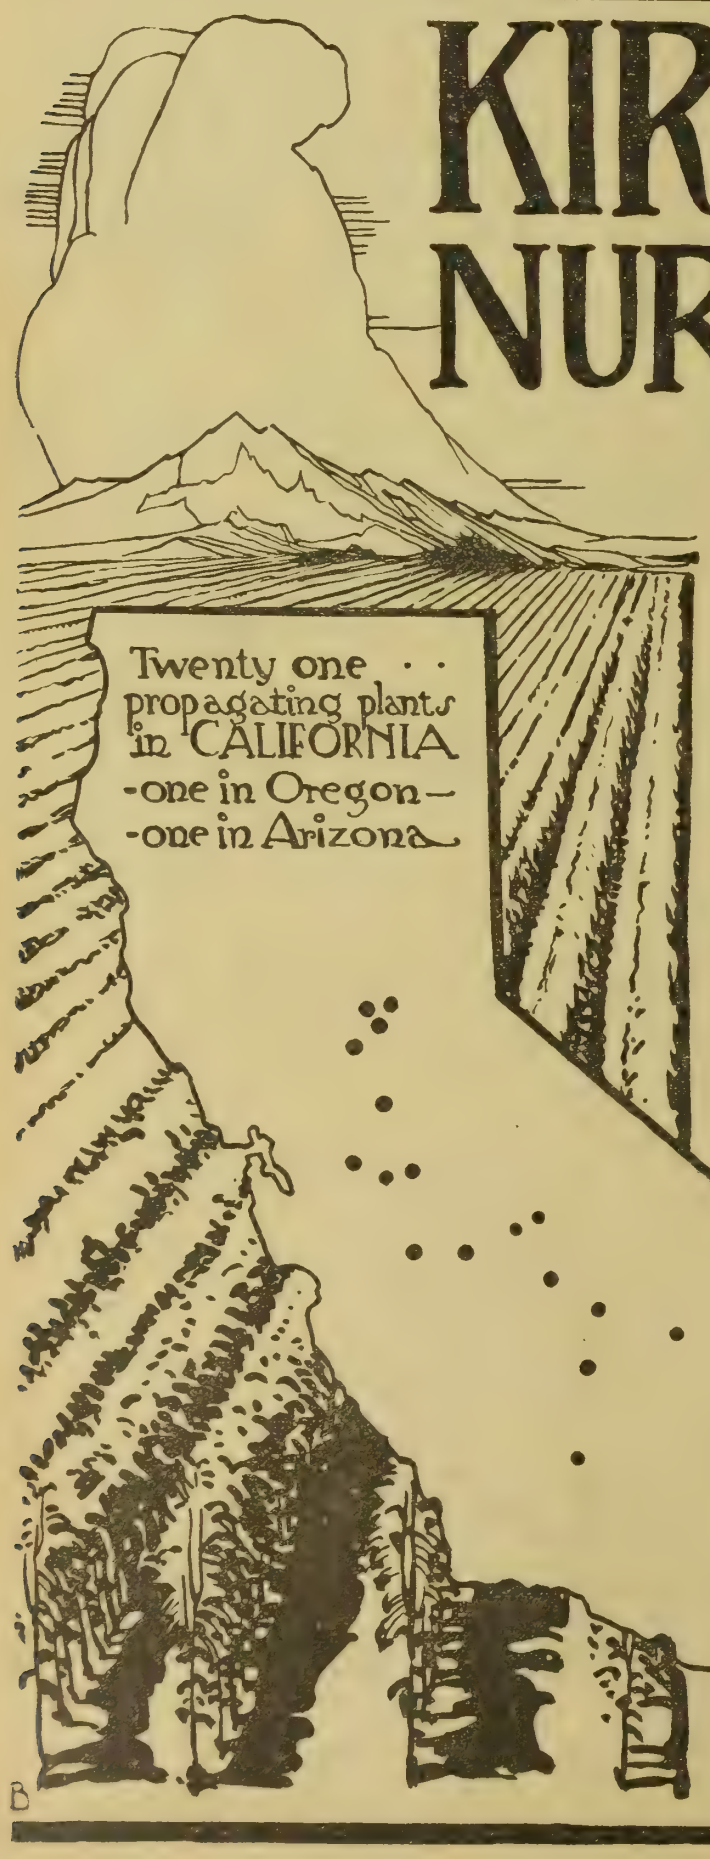
Director Hecke and Secretary and All-Around Assistant Killingsworth, together with the chairmen of the various sessions, deserve and received the thanks of all attending.

The substance of the resolutions reported by the committee and unanimously adopted are:

The Resolutions

Be it resolved that this convention voices its approval of the present form of organization of the state department of agriculture and of its administration, and particularly does this convention express its approval of the present director of the department, Hon. G. H. Hecke, and its appreciation for his tireless activities in the interests of the work which he is administering.

Whereas the government has provided in the railroad labor board an agency for settlement of disputes between carriers and their employes;



KIRKMAN NURSERIES

Established in California in 1888

RELIABLE TREES AND VINES

are essential to the great fruit industries of the Pacific Coast.

Our experience has been gained by 32 years of progression in the nursery and orchard business in California.

Reservations are now being made for future deliveries.

We offer our services in undertaking the planting and care of commercial orchards on large scale.

Kirkman Nurseries, Inc.

Main Office:

Fresno, California

Member of
Bud Selection Association
of California

that the 54th California Fruit Growers and Farmers convention unqualifiedly endorses this agency and demands that both parties to the dispute accept its rulings.

In the passing of Ethan Allen Chase, California fruit growers, and all growers and producers, all mankind, have lost a true friend. His life was an inspiration to greater accomplishment, to better citizenship, to higher service. For more than four score and ten years his motto seemed to be more and better service to others. We, who labored in the same field, we, the fruit growers and farmers of California in fifty-fourth convention assembled at Los Angeles, October 26, 1921, wish to express to the family and more intimate friends our heartiest sympathy in their great loss, and at the same time joy with them in the memories of a life so strong, so efficient, so great.

Whereas the American farm bureau has appointed a national committee of 21, on which California has two representatives, for the purpose of studying problems of the marketing and distribution of fruits of the United States, be it resolved that we endorse the purpose of the committee and offer our services and experiences to them to encourage the organization of cooperative marketing associations among the growers of fruits.

The convention expressed heartiest appreciation of the efficient work of the committee in charge of preparations and detail arrangements for the convention. Members of the committee were: H. J. Ryan, Robt. W. Hodgson, Jas. Britt, Dr. Clements of the Los Angeles Chamber of Commerce and H. L. Musser.

PRUNING OLIVE TREES

THE main object in pruning all varieties of olives in the beginning is to get a robust framework as quickly as possible, and therefore it is only necessary to thin enough to allow light to penetrate freely all parts of the tree and cut out weakly and crossing branches. Olive trees are unlike soft wooded trees that bear stone fruits, being of very hard wood, so that a sufficiently strong frame may be built from the first growth no matter how rapidly it develops.

Heavy pruning would retard such development. After a sufficient framework has been built and the trees are of fruiting age, more pruning is necessary to keep the head of the tree low enough so the crop may be harvested without the aid of balloons or even ladders of unusual length. Preserve the flower bearing branchlets of the preceding year and be careful not to cut away lower branches so that the trunk could get sunburned. Not all varieties may be pruned alike, for Prof. F. T. Bioletti says: "The Ascolano is a straggly, drooping grower and at two years old it is better to tie the trunks and branches to stakes and keep them upright for two years. After that time they will remain fairly fixed as to position. The Manzanillo also is a drooping variety and seldom grows too high. Open up the center, thin well and cut away the larger drooping branches."

The Mission Olive

As the Mission is grown far more than all other varieties combined, we quote in full Professor Bioletti's latest directions for pruning this variety:

"The principal object of all the work done in a young olive orchard is to bring the trees to a sufficient size and a suitable shape for bearing, in as short a time as possible. This object may be helped or hindered by pruning. The usual method of pruning based on the practice used with peach and other deciduous trees is successful in producing the desired shape but much delays the attainment of the size necessary for bearing. A method which will attain the desired object much more quickly has been well tested for a number of years. The fundamental idea of the method is to cut off as little of the tree and its foliage as possible and still obtain the desired shape.

"On planting cut back to two or three feet, according to size, cut back branches to a few inches and whitewash. During the summer pinch the growing tip of any shoots below the middle of the stem. The second year remove all suckers from below ground and all twigs within 12 inches of the ground. Leave everything else. The third year remove everything below 12 inches. Leave everything else. Continue this prnning or lack of pruning until the tree has reached a height of eight or ten feet, when it is large enough to bear. The fourth or fifth year the tree will consist of an upright trunk two to three feet high, from which are growing on the upper two-thirds from five to eight or more main branches. Two or three of these branches will occupy the center and will grow vertically several feet higher than the others. These others will have an angle of about 60 degrees from the vertical.

"The pruning consists of three steps: Cut out the tall central branches completely, that is, do not shorten them or leave stubs, but saw them off at the point where they leave the main trunk, or where a strong spreading branch makes a fork. This will give the tree the open goblet shape desired.

"The surrounding ring of branches is then examined and if they make too dense a mass some should be removed, as was done with the center branches. Remove any which appear crowded, crooked or ill placed.

"Thin out the small drooping branches where they appear too dense for the enarance of sun and air. Do no thinning out of small twigs. If enough branches and secondary branches are removed, the twigs and branchlets left will be given the air and sun necessary to make them set fruit. Above all, do not shorten the ring of large branches nor remove any of their twig growth. This would tend to make them drop their fruit and send out very vigorous sterile shoots. By leaving all their twigs they are encouraged to bear and a good crop at this stage will bend out the main branches and give the tree the low spreading shape which is desired."

ORANGE AND OLIVE EXPOSITION

The Northern California Orange and Olive Exposition will be held at Oroville during Thanksgiving week, November 22 to 26. The dates selected will also prove conclusively that the north has oranges ready for the Thanksgiving table. The exposition will be held in the big auditorium at Oroville, which has a floor space of 26,000 square feet and is the largest building for exposition purposes north of Sacramento.

POTATO MEETING

The potato growers of the Los Angeles County farm bureau will hold their fall meeting for Southern California potato growers in the Van Nuys high school at 10 a. m. on Tuesday, November 29.

The two big problems confronting the potato grower of the south are the disposal of the enormous crop of culls and the working out of some system whereby a profitable crop of fall potatoes can be secured. The loss from these two items amounts to millions of dollars every year.

The program is:

Election of officers of the Potato Growers' Department.

Presentation and discussion of program of work for 1922.

The necessity of remedying the fall crop situation, Robert W. Hodgson.

Blackheart of potatoes, Dr. J. P. Bennett.

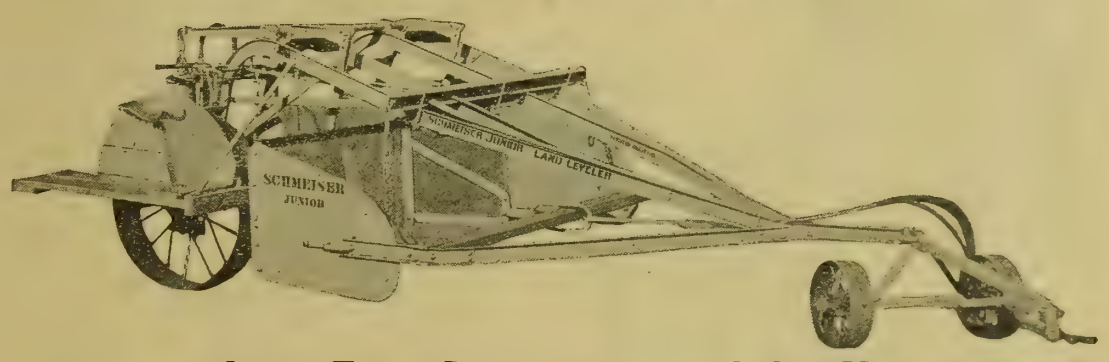
What the manufacturing interests can do for the cull crop of potatoes, Dr. Geo. P. Clements, agricultural department of Los Angeles Chamber of Commerce.

What becomes of the Southern California potato crop. R. G. Risser.

A PATRIARCHAL ORANGE TREE

The Farmers Weekly of South Africa records an orange tree growing at Cambria, Cape of Good Hope province, that is more than 100 years old. It was grafted on a lemon root. It was quite a large tree when the present owner's grandfather was born, more than 90 years ago. It is not stated what variety it is, if known, but it bore one year "more than 7000 oranges."

Schmeiser Air Controlled Land Leveler



9, 10, 11 and 12 Foot Sizes. 2 to 5 Cubic Yard Capacities and requiring 45 to 75 H.P. Tractors

The simplest and easiest method of operation. The tractor driver can do it as easily as the locomotive engineer handles the brakes on his train.

Schmeiser Hand Controlled Land Levelers

7, 8, 9 and 10 Foot; 2 to 3 Cubic Yard Capacities. For 20 to 60 H.P. Tractors

Easily operated by a man on the leveler by a hand wheel.

SCHMEISER BABY LEVELERS

5, 6 and 7 Foot. ¼ to 1 Cubic Yard Capacity
For All Small Tractors

For reclaiming rough, worthless land; leveling land for orchard, vineyard, garden, hops, alfalfa, asparagus, cotton, and in fact for any crop requiring irrigation these Levelers have no equal, and will reduce the cost from 25% to 50% over that of any other method of leveling.

These Levelers are also good road builders; manure spreaders; and in fact will do many things on a farm, thus saving money to the owner.

The Operation of Federal Foreign Plant Quarantines

By R. Kent Beattie, Foreign Plant Quarantine, Federal Horticultural Board, Before State Nurserymens Convention

THE average American citizen thinks of the United States government as an organization set apart from the people, located far away at Washington, D. C., and very impersonal in its nature. Members of the United States department of agriculture are often looked upon almost as foreigners come among you to bring you messages from afar. It is but fair to remind you that the department is but the people of the United States at work solving its food problems and expanding, improving and protecting its agriculture. Every member of the department is a citizen of some state, territory or district. Every state, north or south, east or west, is represented and of course California has its share of agricultural workers at Washington. These men are your agricultural representatives, drawn from among your people, carrying out their studies on your crops and in your fields and orchards.

I am happy to say that I myself am a citizen of a Pacific Coast state, of Washington and as such may claim an especial interest in and some familiarity with your agricultural and horticultural aspirations, progress and problems.

It is interesting to note that four of the five members of the federal horticultural board chosen by the secretary of agriculture to act as his principal advisers and agents in the enforcement of the plant quarantine act are western men, the states of Kansas, Vermont, Michigan, Nebraska and Ohio furnishing the men who are members of the board. All are men of long experience in the department and possess broad familiarity with American agriculture.

It is not necessary to explain to a California audience why the plant quarantine act was passed by congress. The so-called San Jose scale which descended upon California from China some 40 years ago was the first great school master who taught the American people to fear a foreign agricultural foe and California was the first pupil to graduate from his school.

But the San Jose scale was by no means the first introduced pest. Foreign plant diseases and serious insect pests had been coming into the country for years. The late blight of the potato which came from South America has been here so long that America pays a tribute of from five to ten per cent of the potato crop to it every year almost without thinking. Wheat and oat rusts came at least a hundred years years ago and every year levy tributes of millions of dollars. But the San Jose scale caused serious and noticeable losses, it made necessary radical improvements in spraying practice, and last but not least it came when the mind of the American people had developed to a point ready to grasp its significance.

Taught by this and other pests, California led in the development of horticultural protection and developed a splendid quarantine service which has been an inspiration and an example to the other states.

But the American people as a whole received lesson after lesson. The San Jose scale descended on the eastern states. The gipsy moth and the brown tail moth began their ravages at Boston. The Hessian fly invaded the wheat belt. The chestnut bark disease moved like a consuming flame through the valuable chestnut forests of the Appalachians. It became apparent that state authority and state forces were unable to protect efficiently our international boundary lines.

The passage by congress of the plant quarantine act in 1912 provided the secretary of agriculture with machinery by which he could set up a national defense against the inroads of foreign plant pests. As required by the law he appointed a federal horticultural board to assist him in the work, its personnel selected from the bureau of plant industry, the bureau of entomology and the forest service as provided by the act.

The board employed such subordinates as are necessary and with the growth in complexity of the plant quarantine work has organized several divisions or offices. The office of foreign plant quarantines has been charged with the supervision of the enforcement of the foreign quarantines. It is of the operation of these foreign quarantines that I wish to speak particularly today. They have been the subject of much misunderstanding and much misrepresentation. This has confused the minds of nurserymen everywhere. I wish to present to you the actual facts. I am sure that these facts will then speak for themselves.

The plant quarantine act itself provided for the regulation of the importation of foreign plants. Immediately after the plant quarantine act became effective in 1912, rules governing such importations were established by the secretary. They were based upon the then current theory that, in the main, undesirable diseases and insects could be excluded by requiring the inspection and certification abroad of imported stock by the officials of the country of origin and by the reinspection of the stock at its destination in America. Where certain outstanding diseases or insects were known to exist, such as the white pine blister rust, the potato wart, the citrus canker, the avocado weevil, and the pink bollworm of cotton special quarantine orders were issued placing greater restrictions on the importation of these plants and throwing greater safeguards around such plants as were admitted to entry.

Seven years of experience with this system showed very clearly that foreign inspection and certification does not remove the risk. During these seven years infested shipments, all certified as clean, were detected as follows: From Holland, 1051 infested shipments with 148 kinds of insect pests; from Belgium 1,306 infested shipments with 64 kinds of insect pests; from France 347 infested shipments with 89 kinds of insect pests; from England 154 infested shipments with 62 kinds of insect pests; from Japan 291 infested shipments with 108 kinds of insect pests; from Germany 12 infested shipments with 15 kinds of insect pests.

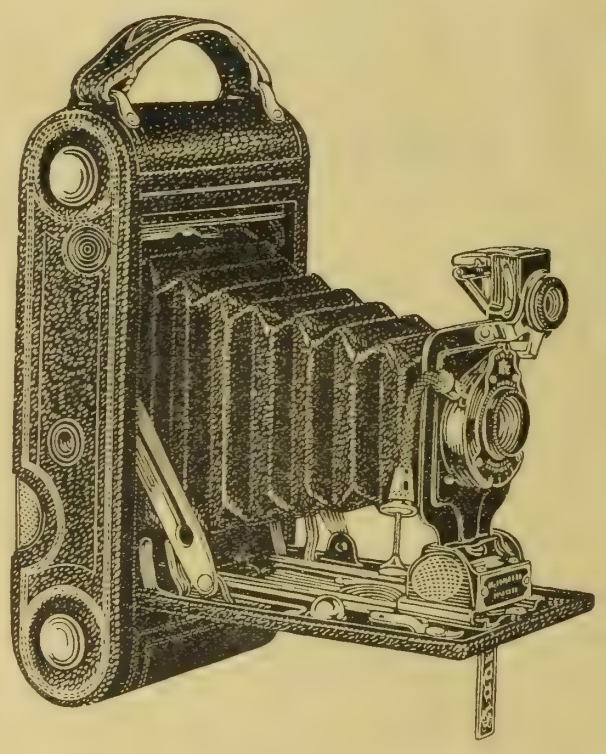
The gipsy and brown tail moths, for example, have been found in 67 shipments of 16 different kinds of plants.

It also became clear as we gained inspection experience that no inspection, however perfect, can detect all pests. The white pine blister rust, for example, has been known to be dormant, invisible in the tissues of a white pine for more than ten years after the pine was infected in the nursery. The bacteria which cause citrus canker may be carried unseen on the surface of apparently healthy twigs, leaves or fruit.

It was also evident that no method of disinfection could be depended upon to clean all imported plants. Valuable as cyanide fumigation is in many cases, corn borer larvae in broom corn from Italy have survived the gas from 12 ounces of sodium cyanide per 100 cubic feet after about 60 hours of exposure by the vacuum process. Hydrocyanic acid gas applied by the vacuum method has failed to kill the Oriental fruit worm which reached the eastern United States in Japanese flowering cherries and is now passing over to the American peaches.

No fumigant is known, nor is it likely that one ever will be known, which will kill a disease producing fungus when it lies buried in the tissues of the

For the Farm



No. 1

Autographic

KODAK

Junior

$15

Every essential for good picture-making is conspicuously present in the No. 1 Junior; photographic flourishes are conspicuously absent. The idea back of its design and construction is "simplicity" and this idea is never lost sight of.

Even the novice can get good pictures with the No. 1 Junior from the first, so easy it is to work. Plenty of room for it in the pocket.

The No. 1 Kodak Junior makes pictures 2¼x3¼ inches, has carefully tested lens and shutter with adjustable speeds of 1/25 and 1/50 of a second, as well as time and bulb action, and is autographic—you can write it on the film at the time.

At your dealer's

Eastman Kodak Company, Rochester, N. Y., *The Kodak City*

host plant unless the fumigant is so powerful as to kill the plant also.

While American agriculture is already laboring under a heavy load of pests of foreign origin, by no means all of the foreign diseases and insect pests are present as yet in this country. The terrible downy mildew of corn of the Orient is not here. The Fiji disease of sugar cane has not reached us. There are seven diseases which the American apple has caught from its wild relatives in Hokkaido, the northermost island of Japan, which are not yet in America.

A partial compilation of the known dangerous foreign insects published a few years ago by the bureau of entomology lists 3,000. In the office of foreign plant quarantines we have begun a card catalog of references to foreign plant diseases. We have now 152 drawers of cards with an average of 8 inches of cards to each drawer and we are only well started.

Many parts of the world are not yet botanically and entomologically explored, and no one can anticipate what diseases and insects will come from them.

No one knew that citrus canker existed in the Philippines, Java, or the Malay states till we intercepted it in material seeking entrance at the port of San Francisco. The worst infected lot of this material was destined for Riverside. The eradication of citrus canker and the losses from that disease in the Gulf states have cost the United States government, the states, and the growers not less than $13,000,000. How much would the disease cost California if it succeeded in gaining entrance? No one knows and we are not going to let any one find out if we can help it.

Since experience showed that foreign inspection and certification supplemented by inspection at destination was not a sufficient safeguard, in 1919 a new system of regulation was promulgated in the provisions of Quarantine 37.

This quarantine was the result of seven years inspection experience, of years of study, of numerous hearings, and of the concentrated effort of many minds both within and outside the department of agriculture.

Quarantine 37 greatly restricts the importation of plants into the United States but does not absolutely prohibit the importation of any plant. It is not as drastic as the laws of Holland, Germany, and France which have been in force against the United States for a number of years.

The much talked of "Chinese wall" so vociferously proclaimed is a creature of the imagination of men who do not understand the quarantine, and sometimes of interested parties who do not care to understand the quarantine.

Quarantine 37 does endeavor to reduce importation to its lowest terms and to the safest form. The production of plants in America will eliminate much of the movement to this country of foreign pests. The quarantine does put a stop to the use of the United States as a dumping ground where foreign culls can be auctioned and bases importation upon the needs and the safeguarding of American plant production. But it provides methods surrounded by such safeguards as are required for the development in America of American stock of any variety which America does not already have.

Based upon a broad survey of the horticultural field by plant experts within and outside the department, the quarantine divides plants and plant products into various classes predicated upon American needs and the dangers involved. In every case it is intended that an imported plant shall be introduced into America in the safest possible form.

Entry without restriction is permitted for field, vegetable and flower seeds and certain plant materials imported for food, medicinal or manufacturing purposes.

Entry under the former procedure of foreign inspection and certification and reinspection here is provided for certain bulbs, fruit stocks, cuttings, scions and buds, rose stocks, nuts and certain seeds.

Entry in limited quantities and under special safeguards of other plants not specified above is authorized for the purpose of keeping the country supplied with new varieties and necessary propagating stock unless the plants are covered by special quarantines.

Entry of plants covered by special quarantines is limited to the United States department of agriculture and such material as the country needs of citrus, sugar cane, cotton, etc., is introduced by the the department and grown under special quarantine safeguards till freedom from pests is assured.

The importation of new or unavailable varieties for propagation is perhaps the phrase of this quarantine which most interests you as California nurserymen. Responding to the needs of the country you have rapidly increased your stocks of plants and have gone heavily into the production business. Therefore you are interested in the new varieties of your particular specialty as they appear abroad.

To import such new varieties you should proceed as follows:

You can secure application blanks either from Washinbton, D .C., or from W. S. Fields, Room 8, Ferry Building, San Francisco.

List in detail in your application the varieties which you wish to import and furnish the other information called for, sign the agreement and send the application to Federal Horticultural Board, Washington, D. C.

When you receive your permit, order the goods. Instruct the foreign shipper to wash the roots free from earth, to have the plants inspected and certified by his foreign inspection service and to ship the plants to Federal Horticultural Board, Washington, D. C. for inspection. Material from the Orient for Pacific Coast destinations will be inspected at San Francisco.

Execute and return promptly to the board the bond which is sent you with the permit.

When the plants reach Washington or San Francisco they will be inspected and shipped promptly to you. Use them as you have agreed for propagation purposes and grow the stock in such a way as to maintain its identity for the period of the bond.

By your agreemnt with the board you are at liberty to sell at any time the increase which you produce from the imported plants.

During the 2 1/3 years which this quarantine has been in effect, American horticulture has largely passed through the transition period and plant production is now in progress in America on a large scale. For the first two years of the quarantine the board was liberal in its policy in regard to the importation of unavailable varieties. Nurserymen who regarded the quarantine seriously imported propagating stock and have now established themselves in the business of propagation. Since most of the older varieties have now become available in the United States in quantities sufficient for propagation purposes importations in the future will more and more be reduced to such valuable new varieties as are produced abroad.

During the two and one-half years from June 1, 1919, to October 1, 1921, 1,065 special permits have been issued authorizing the importation of 26,532,108 plants. Of these importations have been made under 618 permits amounting to 10,412,985 plants.

During the first two years of the quarantine the names of 9900 different varieties of plants were submited to us in applications for permits. The consideration of these applications entails a vast amount of work. Each variety is submitted to the experts of the bureau of plant industry for advice as to its availability in America. Frequent requests are received for plants already available here in large quantities with assurances that they are not in the country. Every case is a special case. It receives as fair and impartial consideration as we can give it. No influence and no pressure is of any avail. We play no favorites. We try to be fair and treat everyone alike. We are enforcing an important law and we realize the responsibility.

But while it is important, Quarantine 37 is not the only federal foreign plant quarantine.

During the last year 221,303 bales of foreign cotton entered the United States under permit, were fumigated

Implement Prices Down

OUR 1922 reduced prices on farm machines have just been issued and are effective immediately. They apply on practically our entire line of International Harvester grain, hay, and corn harvesting machines, plows, tillage implements, seeding machines, etc.

In determining these prices, the Company has made a careful study of market and labor conditions and has based the price reductions on the lowest possible raw material and production costs that can, under most favorable conditions, be forecast for the season of 1922.

At the new prices, a grain binder can be bought for $50 to $60 less than the price of Jan. 1st, 1921; and other reductions are in proportion.

At these prices no farmer can afford to postpone the purchase of needed machines, especially if his present equipment will not stand up under the work of another planting and harvest.

An old corn planter may crack enough kernels and miss enough hills to make its use mighty expensive. A new planter will save much of its cost the first season. The same is true of a drill. Your old binder may lose grain enough in one harvest to make a substantial payment on a new machine. The new machine will go on for many years, saving a large amount for you each year.

Economy consists not in getting along with worn-out machines *but in farming with efficient machines.*

You will of course continue with that part of your present equipment which is in good order and satisfactory. But it is good judgment now as always to abandon those machines which are really worn-out. Where repairs have been made again and again, beyond the point of serviceability, waste and loss are pretty sure to follow. Present prices will enable you to replace the old with efficient, modern machines. As Mr. J. R. Howard, President of the American Farm Bureau Federation, has said, "The farmer who needs additional machinery and equipment pays for it whether he buys it or not."

If you are at present interested in learning some of the new prices, or in looking over any individual machine, the International Dealer in your vicinity is at your service.

Insure Your Fruit Crop Now by Spraying

California Peach Blight, curl leaf and other diseases take this time of the year to get a good start on deciduous trees. But they are forced to quit before their attack is fairly under way when they find an orchard in which the owner had the foresight to

SPRAY WITH

Orchard Brand

B. T. S. (dry barium sulphur) 40-50 lbs.
or Bordeaux Paste 36-40 lbs.
or Bordeaux Powder 18-20 lbs. } **200 gal. tank**

If the scale insects are present, or if more sticking qualities or penetration are desired, add Miscible Oil and Glue to the above formula, as outlined in our Deciduous Bulletin.

Universal Brand

Dormant Soluble Oil 12-15 gals.
Crude Oil Emulsion 20-25 gals.
If scale insects alone are present.

Fruit buds and fruiting woods will be seriously handicapped later on unless you give them their chance now. And they haven't got a chance if injurious diseases are allowed to take hold during the rainy season.

Our Bordeaux sprays, made from the highest grade materials and combined by chemical processes, are standard. Their uniform composition gives the greatest efficiency. In the end, they are less expensive than home-made mixtures.

Our expert entomologist, Paul R. Jones, will gladly solve your spraying problems. Send today for your free copy of his latest bulletin on deciduous spraying.

INSECTICIDE DEPARTMENT

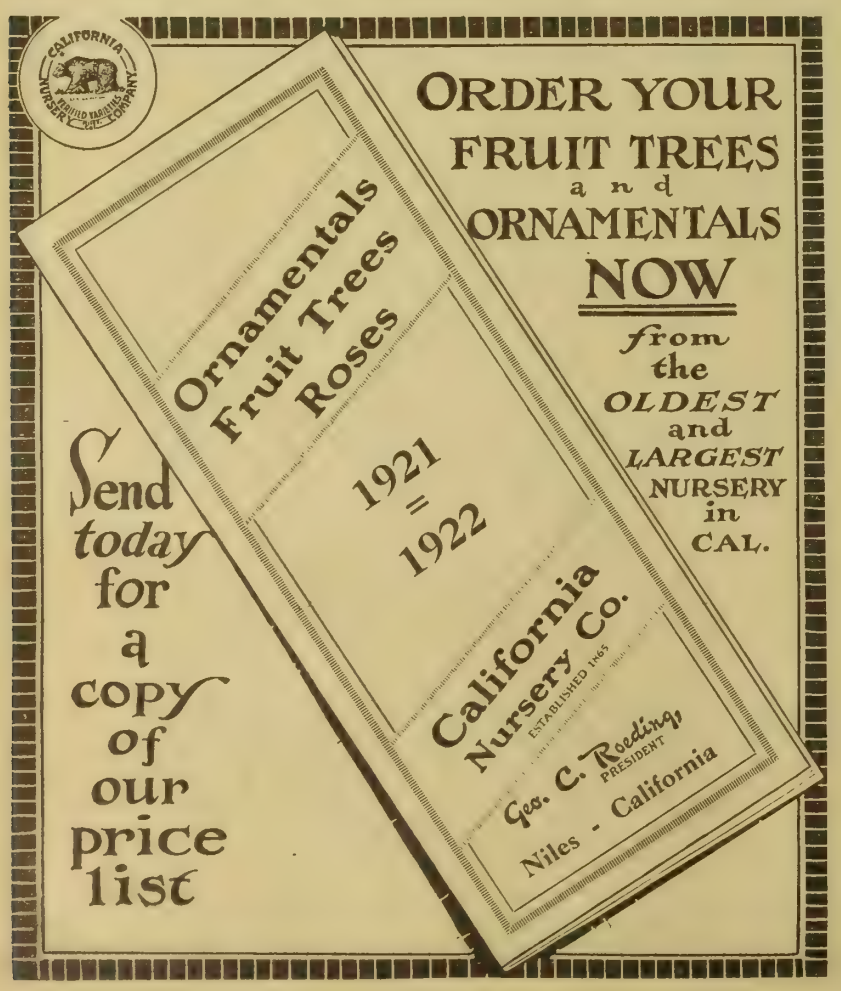
SAN FRANCISCO
Balfour Building



and are being traced in their movement in the United States till they are manufactured. During 1920, 595,765 bales were thus imported.

During last year, 191,968,882 bulbs of the unrestricted sorts were imported and inspected, 21,276,995 fruit stocks, cuttings, scions, and buds and 5,934,192 rose stocks were imported.

20,656 boxes of oriental oranges, 2,628 tons of Manchurian corn, 1,142 bags of oriental wheat, and 154,635 bushels of Danish and Mexican potatoes were imported under the restrictions of special quarantines, were inspected and received such treatments as are prescribed by the respective quarantines.

The board maintains inspectors of its own or has state men appointed as collaborators at 27 maritime and border ports. On the Mexican border it maintains an inspection of cars, freight and personal baggage and fumigates the cars and freight which cross the border into the United States east of the mountains. During the first 19 months of the operation of the fumigation houses 35,420 cars were inspected. These would make a train 302 miles long. Of these 18,070 were fumigated—a train 154 miles long. For this fumigation about 75 tons of sodium cyanide and 200 tons of sulphuric acid were used. The fumigation houses were constructed and are operated by the board. The largest houses will hold 15 freight cars at one time.

I have given you a few of the facts in regard to the protection which the department is giving you plant growers against foreign pests. I have not mentioned the domestic side of the work, the eradication of the pink bollworm of cotton from Texas, Louisiana and New Mexico, the control of the gipsy and brown tail moth in New England and New Jersey, the potato wart fight in Pennsylvania, Maryland and West Virginia, the Japanese beetle work in New Jersey and Pennsylvania, the corn borer quarantine in New England and New York nor the effort to hold the white pine blister rust out of your western states. Each of these would make another story and some of them very large stories indeed. I commend to your perusal an article by Dr. C. L. Marlatt in the August, 1921, number of the National Geographic Magazine where the work of the board is set forth clearly both by pictures and text.

Is it all worth while? Shall we all cooperate to protect American agriculture against its foreign foes? Will you nurserymen do your share? Will you grow in America the plants which America needs? We can not go back to the old days. We can not again admit freely the diseases of the foreign lands and jeopardize our food supply, our forest trees and the ornamentals which we are growing here. It does not require European magic to propagate a plant. It may have taken years for Europeans to learn how to grow plants, but we will learn the business in a briefer time. It took Europe longer to produce an army than it did America. Surely it is patriotic and sensible to raise an army of plant protectors and plant propagators and thus guard our crops against their foreign agricultural foes.

November in the Ornamental Garden

Northern California

By A. R. Gould

THERE has quite recently been a great revival in garden development and business is now getting brisk. Seedsmen and nurserymen are booking orders for the planting season and garden owners are planning extensive improvements. Everywhere there appears a keen interest to learn something about plants and their culture, and this is most encouraging as it means that there will be many lovely gardens and some beautiful cities.

This is the most opportune time to make all plans for the season as most trees and shrubs may be safely moved if proper methods are used.

Roses

These will need attention at this time as the bugs are busy, especially the aphis, and prompt measures should be taken by spraying with "Black Leaf 40." It will also be advisable to replant any vacancies with young stock. Some of the new varieties should be added to the rose garden. Of these Lolita Armour, Iona Herdman and Los Angeles are worthy of recognition, and other excellent varieties are Hadley, Lilian Moore, E. Herriot, Columbia, Golden Emblem and Autumn Tints. Climbing roses should be given attention. The season's growth should be tied in and dead wood or weak growth removed. Bush roses will also need pruning and the ground should be well dug and manured.

Iris

No garden is complete without the iris and although there are now a considerable number of varieties and it would require much space to have a representative collection a few of the best hardy types should be secured and planted now.

Begonias and Dahlias

Tubers of these should be dug and stored in a dry shed or cellar for the winter.

Spring Flowers

Now is the time to prepare for the spring display, and the following planted now will give successional bloom: Bulbs, daffodils, crocus, snowdrops, hyacinths, tulips, anemones, ranunculus, primulas, violas, wallflowers, pansies, for-get-me-nots and winter flowering stocks. Seeds of California wildflowers may be sown broadcast on well cultivated soil.

Perennials

Nothing is more satisfactory for the border than salvias, Sweet Williams, scabious, delphininms, dianthus, campanulas, gaillardias, heuchera sanguinea, columbines, geums, veronicas. Hollyhocks and foxgloves may also be used to give the border that old fashioned look.

Sweet Peas

These, if sown as advised last month in well prepared trenches, should be making good progress and the leading shoots should be pinched to encourage strong growths which may be limited to three or four. There is still time to sow for succession.

Early Flowering Gladiolus

This useful race is valuable as a cut flower and the bulbs may be planted now in well manured soil. Good varieties are Peach Blossom and the Bride.

Lawns

These may now be renovated by sowing in the bare patches, and neglected lawns should be turned under and entirely resown with clear fresh seed.

Southern California

By Ernest Braunton

NOW that some parts of the south have received heavy rains, and all parts some rain, gardening operations in general must be taken up. For weeds will grow, dormant bulbs will send up flower and leaf spikes and the weather is still warm enough so that under the combined stimulus of heat and moisture all plant life will become active. Wherefore we should become active in the garden.

Though bulbs of many sorts have been planted in September and October, and others will be planted up to and in the beginning of the new year, there is no month when so many can be planted with assurance of success as in November, for this month is the last one for planting early bulbs and the first for winter or spring bulbs. Any and all except the tropicals, which are held for April planting, may be put in the soil now.

Seed sowing is in the same happy medium of time as bulb planting and may be indulged in freely—except of sorts likely to be injured by frosts or those of such tropical requirements that seeds will not germinate because of low soil temperature. Some special sowing should be urged as of excep-

tional value at the present time. Sow seeds of native wild flowers, either in mixture or in separate kinds, which may be procured from any seed dealer and should go in at once. Another timely planting is of sweet peas; later sowings will bring lesser results.

Aside from bulb and seed propagation, nurserymen, gardeners and amateurs are busy growing from cuttings or slips. A box of clean sharp sand, with holes in bottom for drainage, is the main item of equipment necessary. Bottom or artificial heat is not necessary. One must watch sharply, however, to see that sand does not become too dry. Also avoid too great saturation, most of all stagnation, for if the latter results, rot or damping off will surely claim the cuttings. Alternanthera (border plants), begonia, coleus, fuchsia, heliotrope, Marguerite and penstemon are some of the sorts from which cuttings can be taken.

Perennial flower roots may be freely planted now and cutting back of old tops will bring new flowering growth. This method will not do for heliotropes for the new growth is too tender to withstand the frosts that surely will come. Fuchsias are best left until March, for they are but half hardy. But hardy plants, such as penstemons, are best cut back now to within six or eight inches of the ground and new tops will bring new flowers. Mulch violets, carnations and other winter flowering plants; they need food now.

The rose garden should be well fertilized and the fertilizer dug into the soil. Do not prune rose bushes now except to take out weak spindly growths, but give food and water freely.

It is too early for lawn fertilizing unless in dire need. If so, fertilize lightly and reserve main food supply until heavy rains no longer endanger its being washed away by flooding or run-off, or carried below root zone by saturation and percolation.

November in the Vegetable Garden

Southern Arizona

By M. E. Bemis

Cooler weather makes germination more sure but slower. It narrows a little the list of plantable things, but most of the things planted for October, such as beets, carrots, lettuce, onion sets, parsley, parsnips, late peas, radishes, spinach, turnips, and cabbage and cauliflower plants may be planted. Cool nights and mornings will make growth slower but warm days keep the ground from becoming very cool for some time yet.

There is some consolation in that weed growth is less for the next two months or more. Cultivation should not by any means be discontinued.

Preparation for strawberries to be planted in December, or fruit trees or grapes to be put out in January may be well made in November. Thorough plowing and harrowing for any future plantings are always in order.

Northern California

By A. R. Gould

THE recent rains have been of great assistance and will enable us to get the ground into shape for the coming season. Deep trenching is essential to success in vegetable culture, and the same remark applies to manure, barnyard manure being preferred. We have also frequently urged a system of rotational cropping and would once more repeat that this consistently pursued brings good results. On stiff and heavy soils apply lime, while decaying vegetable matter dug in will also help. It will also be a good plan to apply wood ashes to the onion plot, in fact a light dressing will do no harm to any of the plots as potash is an important element. If you notice any extra good types among the beans, peas, squash, tomatoes or melons, seed should be saved and sown for next season. This is also a good time to study the seed lists to order the supply for the season.

Onions

Best results are only secured on a rich, fairly sandy soil. They delight in nitrogen and humus, and it is a good plan to sow them on the plot previously used for beans or peas. The surface soil must be well pulverized before the seeds are sown. Early varieties such as Early Red Bermuda, White Bermuda and Early Pearl may now be sown in rows 20 inches apart. Onion sets may also be planted three inches apart in rows two feet apart.

Peas

Sow the early varieties, Little Marvel, Blue Bantam, and Laxtonian, all dwarf types. Sow thinly in rows at least two feet apart. Main crop varieties may be sown later but this plot may be well prepared this month.

Beans

The Broad Windsor is the hardy bean and of very fine flavor and deserves to be more widely grown. Make a sowing now in rows, very thinly spacing the rows two feet apart.

Radish

Winter varieties, Black Spanish and Rose Winter, should be sown in rows 18 inches apart. Thin out later to four inches apart.

Beets

Sow Early Egyptian and Detroit Dark Red very thinly in rows 20 inches apart. This will prove a valuable winter crop. All matured beets should be dug and stored.

Parsley

Sow Moss Curled in rows 18 inches apart.

Lettuce

Sow Los Angeles and White Paris Cos in rows very thinly. Keep well cultivated and moist.

Cabbage

This crop requires a rich heavy soil and is excellent for winter. Plant strong sturdy plants of Autumn King, Large Flat Dutch and Savoy 12 inches apart in rows two feet apart.

Parsnips

Sow Hollow Crown in rows on a deep rich soil two feet apart. They require a long period of growth.

Herbs

Thyme, mint and chives may be subdivided and then planted 18 inches apart. Plants of rosemary and marjoram may also be added to the herb plot.

Asparagus and Rhubarb

These two very important crops should be liberally manured and new plots prepared for planting with new stock later. There is little use in keeping old plants of asparagus after they are three years old. Young plants give best results.

Berries

Strawberries and raspberries may be planted this month on plots which have been well manured. Raspberries should be spaced two feet apart in the row and strawberries 18 inches.

Local farm bureau meetings will be held in Kern County at Weed Patch, November 7; McFarland, 11; Delano, 14; Old River, 15; Wasco, 16; Rio Bravo, 17; Edison-Fairfax, 18; Pond, 23; Inyo-Kern, 24; Rosedale, 25; Shafter, 28; Arvin, December 2; directors, Bakersfield, 3.

SAVE SWEET POTATO SEED STOCK

Selection of the sweet potato seed stock at digging time permits choice of potatoes that are true to variety and from high yielding hills and tends to build up heavy yielding strains, experiments by the United States department of agriculture have shown. Seed free from stem rot can be secured at digging time while the potatoes are still attached to the vines. Each hill should be tested by splitting the stem, and potatoes should be taken for seed only from plants the insides of whose stems are not streaked with black, though it should be remembered that a heavy frost will also produce a similar appearance.

The fall selection is necessary owing to the fact that in the spring or during the winter it is difficult, and frequently impossible, to tell whether the roots are diseased or not, since after a period in storage the bundles (the tissues traversing the tubers) of healthy sweet potatoes often become somewhat darkened, even though the fungus is not present. It is not necessary to retain the large potatoes from the desired plants for seed, as the medium-sized ones—those from 1 to 2 inches in diameter and from 3 to 6 inches long are better for seed purposes.

The seed stock should be gathered in crates or hampers, marked to show the variety, transported to the storage house on a spring wagon, and placed in a part of the house where they will not come in contact with the general stock. In other respects the treatment should be the same as that given the commercial crop—that is, it should be cured for a period of from 10 to 12 days, at a temperature of about 85 degrees, after which the temperature should be reduced to about 55 degrees and held there for the storage period.

REMCO TANKS

AGAIN REDUCED IN PRICE

We will ship you, immediately on receipt of order, any standard Remco tank of the dimensions or capacities shown below at the prices here listed:

WATER AND OIL TANKS

Legal Queries

Louis B. Stanton, attorney, 343 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 317 Central Ave., Los Angeles.

License to Sell Plants

Does the law require a license to sell strawberries or other plants in the neighborhood or county?—Subscriber, San Diego.

It is provided by Section 2319i of the Political Code that any nurseryman, agent, jobber, person, firm or corporation operating in California who ships, sells or handles nursery stock, trees, plants, shrubs or vines which are for planting or propagation purposes within the borders of the state shall register with the commissioner of the state department of horticulture (now director of state department of agriculture), and pay one dollar for such period of registration of one year. There shall be issued to the applicant a special number. It shall be unlawful to ship or to deliver within the state of California any package or other container or shipment of nursery stock, trees, plants, shrubs or vines for planting or propagation purposes within this state, which does not bear such special number in a conspicuous manner or place. Any agent in the employ of a nurseryman to whom such license has been issued shall at all times use the license number of his principal. Any person who violates the provisions or refuses to comply with any order made by the commissioner of horticulture by whom such license is granted shall be guilty of a misdemeanor.

American Born Japanese

Is a Japanese who is born in this state a citizen of the United States? Can such Japanese rent land for farm purposes in California?—Subscriber, Inglewood.

The fourteenth amendment to the Constitution of the United States provides that all persons born or naturalized in the United States and subject to the jurisdiction thereof are citizens of the United States and of the state wherein they reside. No state shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States, deprive any person of life, liberty or property or deny to any person within its jurisdiction the equal protection of the laws. It is thus clear that any person born in this country whose parents were Japanese is an American citizen and is entitled to exactly all the privileges, including the right to purchase or lease land, which any other citizen may have or possess, and no state can take away or abridge such privileges.

Title to Homestead

A father willed 80 acres of land to his son, who worked it for a few years but thereafter abandoned it. Another son redeemed delinquent taxes on the land, has continued to pay subsequent accruing taxes and has occupied the land for 20 years. Can this son now legally hold the land as his own?—Subscriber, Sunol.

The mere redemption payment of taxes gives little or no right to the land, but if the son has complied with the requirements of the law concerning adverse possession he has undoubtedly acquired the right to this land. To entitle a party to gain title to land on adverse possession where he claims title thereto but where his title is not founded upon any written instrument, he must have protected the land by a substantial enclosure and cultivated and improved the land in the usual manner. Adverse possession is established only in case the land has been thus occupied and claimed for a period of five years continuously and all taxes paid, both state, county and municipal, which have been levied or assessed upon such land during period. A party who has complied with all these provisions becomes entitled to have his right established. In order to establish it, however, it is necessary for him to bring an action in the superior court against all parties having any claims in or to the land and obtain a judgment of the court. Otherwise there is nothing of record to show his title or right.

Home Brew

Is it legal for persons to make for their own use home brew containing more than one-half of one per cent alcohol?—Subscriber, San Luis Obispo.

It has appeared from past administrative and legislative procedure that the revenue department or prohibition enforcement officers would not and would not be permitted to search private homes for wines or beers manufactured for the use of the occupant. This seems to be rather a refraining upon the part of the government from enforcing the provisions of the 18th amendment rather than any legalizing of the manufacture. The amendment specifically provides that the manufacture, sale or transportation of intoxicating liquors for beverage purposes within the United States and within all territory subject to the jurisdiction thereof is prohibited. It is apparently one of those cases where the act, although illegal, may be winked at by the officers charged with its enforcement.

Queries

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Sudan With Barley

In your issue of October 22 a Chino subscriber asks about the planting of a grass with barley or oats for hay. I have been successful with Sudan sown with barley in getting all summer pasture of the Sudan, or it can be cut about three times. This year I disked in the Sudan after the rains in May had ruined my barley in the shocks, on the 30th to be exact. I pastured four goats on these two lots ten days before the 15th of July, 20 days more by August 15, and it is now from one to five feet high on the field. Parts pastured the closest are in the greenest condition now. I got some water to these lots with a garden hose in August. To plant with barley sow barley lightly, plow under. Harrow or drill in Sudan, using plenty of seed. Plant in February or March or as late as you feel safe to get a crop of barley in your section.—Subscriber, Venice.

Profitable Table Grape

What table grape would be most profitable this year and would it do well in Turlock? Does the Malaga make a profitable raisin in case of poor fresh market? — Subscriber, Denair.

It is impossible to tell which table grape has been most profitable this year. Information of this sort can only be gotten by averaging returns by varieties of all sales in the different markets for the season. The Malaga grape is primarily a table variety. It does, however, make a creditable raisin if allowed to ripen properly before picking. Returns for such raisins will probably not be as great as for the regular raisin varieties.—F. K. H.

What Kind of Grape?

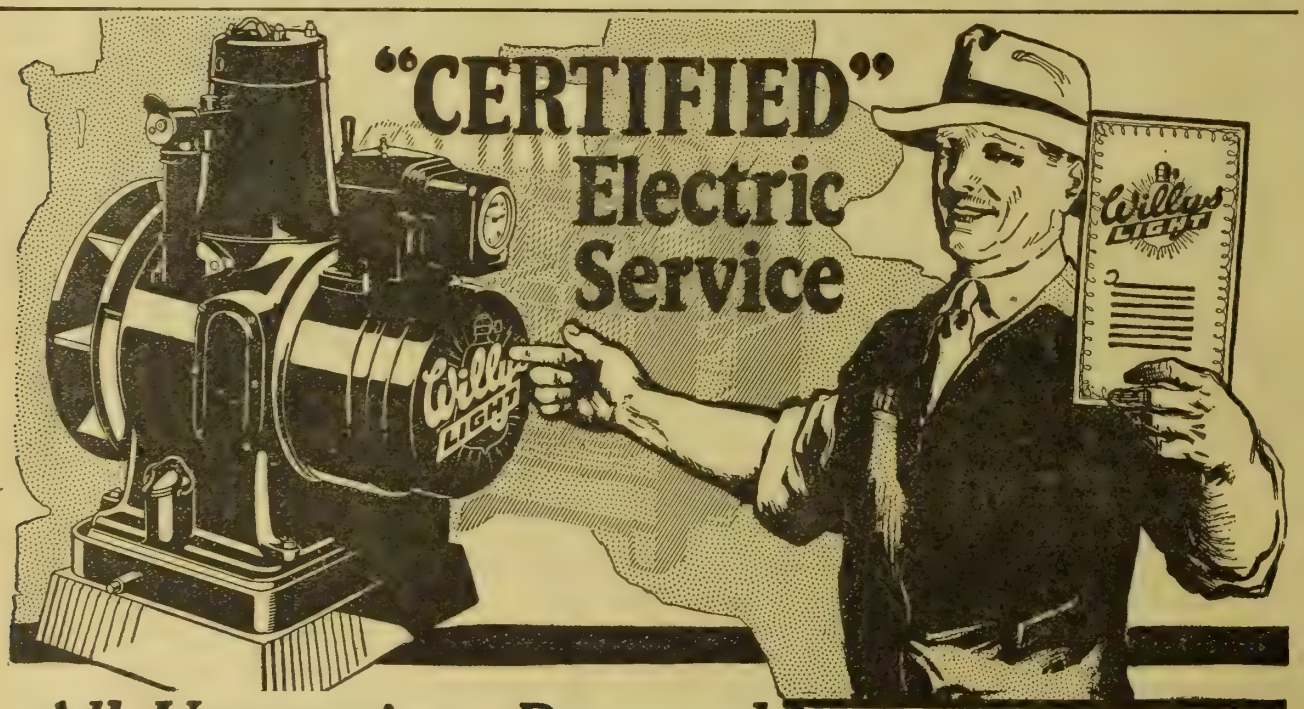
What kind of grapes would be best to plant on a piece of land that has hard and heavy soil? My neighbors thought Emperor grapes would do well on such soil. There is also some alkali in this soil. — Subscriber, Turlock.

Our advice would be to go slow with any grape planting on hard heavy soils containing alkali. Why not try out a few vines of small standard varieties or, better still, look around your district and see if there are any successful plantings on this kind of soil?—F. K. H.

Grapes at Spadra

We are thinking of setting out about 75 acres to grapes. What kind would you suggest as a good seller? Can you tell me cost per vine and distance apart for planting? — Subscriber, Spadra.

Would suggest a colored table grape of some sort or, better still, divide your planting in such a way that you have some white and some colored varieties ripening at intervals throughout the season for local markets and also some for eastern shipment. A good nursery catalogue will give a description of many varieties which could be used for these purposes.—F. K. H.



All Uncertainty Removed

There has never been a question as to the desirability of electric light and power for the farm and suburban home.

The questions have been: Is the individual electric service system practical? Is it dependable? and, Can the average farm afford it?

Today, farms of all sizes and under all conditions in every state have had experience—and the answers are undeniable. WILLYS LIGHT Certified Electric Service has removed all uncertainty as to the utility of individual light and power.

Today, nowhere to our knowledge is there a dissatisfied WILLYS LIGHT owner. Instead, thousands have voluntarily stated they could not afford to do without it at even double the cost.

These owners regard WILLYS LIGHT as the most profitable equipment on their farms. Their work is lighter—their homes brighter—their lives happier—and their expenses lower, because of WILLYS LIGHT Certified Electric Service.

Many have already paid for their plants from the increased earnings and savings made possible through WILLYS LIGHT.

You can take the word of these men who know. We will gladly give you their names—men from your own state—perhaps your neighbors, or within driving distance.

Why not find out what WILLYS LIGHT Certified Electric Service actually guarantees in the way of dependable advantage and profit for your home? Why not get free estimate of complete cost for plant and installation?

We will gladly furnish this without obligation. Write for free illustrated catalog and complete information today. Address Department 80.

WILLYS LIGHT

Power and Light with the Quiet Knight

The Foundation Beneath Willys Light Certified Electric Service

First of all comes experience. The men who construct WILLYS LIGHT have built more than 3,000,000 electric lighting systems for farm homes, stores, yachts, Pullman cars and automobiles.

All guesswork, all uncertainty, all theory is eliminated. It is the product of experience. WILLYS LIGHT is built with the precision of a watch and the sturdiness of a tractor.

Second comes judgment. When you buy WILLYS LIGHT we consider your requirements before recommending an installation. We specify a plant and equipment to fit your particular needs. This, coupled with expert installation, guarantees economy both of original cost and subsequent operation.

And finally comes responsibility. A great network of trained men and expert dealers covers the country and insures that what you buy—Certified Electric Service—is constantly maintained.

There is a size to fit your needs—as much or as little power as you may require.

ESTIMATES OF CORN ACREAGE DO NOT DIFFER WIDELY

Numerous inquiries have been received by the United States department of agriculture calling attention to statements contained in a recent advertisement appearing in several newspapers attacking the accuracy of the department's estimates on the corn crop. The advertisement charges that the present price of corn is being depressed by the alleged overstatement by the department of the corn acreage and production of 1919, 1920 and 1921 as compared with the preliminary figures as reported by the bureau of the census for 1919.

The author of the attack assumes that the 87,667,000 acres which the census reports for corn in 1919 are comparable with the 100,072,000 acres reported by the bureau of crop estimates of the department for the same year. He also assumes that the census figures are correct and that the estimate of the department is incorrect. Both assumptions are wrong. The census report of corn acreage for 1919 is not comparable either with the census figures for corn acreage for 1909 or with the corn acreage estimated by the department for 1919.

The census figures for 1909 included the "total acreage planted to corn." The census figures for corn acreage for 1919 are divided into different sections of the schedule to show acres of corn harvested for different purposes. Assuming without argument that both sets of census figures are correct, to make the figures for both years more nearly comparable it is necessary to combine the corn acreages harvested for different purposes, as reported by the census of 1919, as follows:

Corn harvested for grain, 87,666,910 acres.

Corn cut for silage, 4,006,436 acres.

Corn cut for forage and fodder, 14,499,418 acres.

Corn hogged down or grazed (estimated, census report not yet available), 5,000,000 acres.

Census total corn acreage for 1919, 111,172,764 acres.

Department of agriculture's estimate of total corn acreage for 1919, 100,072,000 acres.

Department of agriculture's underestimate as compared with the census, 11,100,764 acres.

This apparent underestimate, instead of an overestimate as charged in the advertisement, is probably to be accounted for by the duplication involved in the item "Corn cut for forage and fodder," and the different interpretations placed upon the census questions by enumerators and farmers. If this duplication were eliminated, it is probable that the two sets of figures would be almost identical.

FREIGHT CHARGES

The weekly news letter of the American Farm Bureau Federation reviews the freight rate situation as it affects grain growers. It quotes President Howard of the federation in his presentation of the matter to the interstate commerce commission:

"The price which the farmers receive on their commodites is fixed not by them, but at some point where the surplus accumulates or where the world's surplus is dealt in, such as Liverpool for grain and Boston for wool. The farmer does not receive the price at these big distributing points. What he obtains is the distributing point price minus the cost of freight from his local station minus the commissions for handling the products. Any increase or decrease in the cost of transportation is reflected directly by an increase or decrease in the amount of money which the farmer receives. In addition to paying freight on the commodities which he produces he also bears the freight charge on the great amount of products which he consumes or uses in producing crops.

"Excessive railroad rates are largely responsible for the dilemma in which agriculture finds itself. The present cost of production and the high transportation rates will cause the farmers to produce fewer crops next year. Even with conditions as they are at present in many parts of the west farms will not be operated next year and a still greater acreage will be seeded to grass."

Value of Bean Straw as Fertilizer

REFERRING to article by A. D. Shamel in the Cultivator of September 17, "Furrow Manure Distribution in Citrus Orchards," Grinnell Burt, president of the Northern California Olive Corporation at Palermo, Butte County, writes:

"May we trouble you to answer one further question as follows: Without taking into consideration the cost of chopping up bean straw, what is the relative fertilizing value per ton and availability of bean straw as compared with average cow manure? Manure is getting very scarce in this part of the country, average cost alongside orchard about $5 per ton. Bean straw could be hauled for less money and there is a considerable quantity available.

"Perhaps you would be interested in the description of a V-shape drag used by us with great success in covering the manure in the furrows, although no doubt other orchardists have invented the same implement. First of all a timber 14 inches by 14 inches by 10 feet long is planed off to a taper bottom at the hitch. Then the V drag is nailed on same (well braced) and made of 4 inch by 10 inch by 8 foot material. The large timber keeps the drag from meandering, also presses and holds down the manure in the furrow until it is completely covered."

Mr. Shamel writes:

"Bean straw does not ordinarily need to be chopped for distribution in the orchard furrows. Alfalfa hay, on the other hand, can usually be best distributed after chopping except where the hay has been secured from alfalfa seed fields. In these cases the hay from the seed thresher is so finely broken during the process of threshing that chopping is unnecessary.

"It is impossible to make a general statement as to the comparative value of bean straw and cow manure. This condition arises on account of the variability in composition of different kinds of bean straw and particularly the extreme variability in composition of stable manures.

"As a rule bean straw possesses a somewhat higher nitrogen content and is less variable in composition than is the case with stable manure. For this reason I am of the opinion that bean straw is more valuable as a rule for use as a fertilizer in citrus orchards than an equal amount of stable manure.

"With regard to the comparative plant food availability of bean straw and stable manure it can be said that this question cannot be answered in general terms. If the stable manure is from horse corrals and contains a considerable proportion of barley straw it is likely that the availability of the elements of plant food in it will be slower than that of bean straw. On the other hand, if the stable manure is from cow stables where alfalfa hay has been used for feeding purposes and particularly where the manure has been partly decomposed or composted it is likely that the elements of plant food in the cow manure will be as available, or more so, as is the case with bean straw. If average cow manure has not been mixed with barley straw or similar materials it is my opinion that the elements of plant food in it will be as available for feeding citrus trees as is the case with average bean straw.

"Under the conditions mentioned in the letter, where supplies of bean straw are available in considerable quantities for fertilizing purposes and at less cost per ton than stable manure, my belief is that bean straw would be the best and most economical purchase.

"The questions brought up in this letter emphasize again the desirability of buying all organic fertilizers, such as stable manure, bean straw, and alfalfa hay, on the basis of their nitrogen and humus content and the amounts of essential elements of plant food for citrus trees. The purchase of such fertilizers on the unit basis is logical and fair to everyone concerned. The cost of the analyses in this connection is money well spent."

County Horticultural Commissioners in Annual Session

The State Association of County Horticultural Commissioners held what was perhaps one of its most important conventions in connection with the State Fruit Growers Convention last week in Los Angeles. Nearly every county in the state was represented in the attendance, and while several of the sessions were executive there were other sessions in which matters of greatest interest to fruit growers were discussed. They began Monday evening. Others were held on Tuesday, and on Wednesday the commissioners united with the state fruit growers in what was known as farm advisers' and horticultural commissioners' day. Commissioner Stabler of Sutter County and Commissioner Ryan of Los Angeles County presided.

Mr. Flebut of the United States bureau of entomology, who succeeded Mr. Nougaret in investigations as to mealybug and other grapevine pests in Central California, addressed the convention on mealybug. Identification and control of weeds was discussed by Prof. Kennedy of the University of California. Mr. Kennedy is connected with grass and forage plant investigations of the university. George P. Gray, chief chemist of the state department of agriculture, explained the workings of the state insecticide, fungicide and fertilizer laws. This was discussed by T. D. Urbahns of the state department of agriculture. Control of red spiders of deciduous trees was handled by E. R. de Ong of the United States bureau of entomology and Harry P. Stabler, commissioner of Sutter County. Citrus red spider was handled by A. D. Borden, United States bureau of entomology, and R. S. Woglum of the Fruit Growers Exchange.

The convention closed in executive session on Friday morning, which was also election and general business session of the association. Officers elected for the coming year are: President, H. J. Ryan, Los Angeles County; vice president, J. F. Benton, Humboldt County; secretary, A. H. Call, Ventura County. The commissioners expressed greatest satisfaction in the results of the convention, especially in that more united action may now be secured in the inter-county shipments and the working out of proper quarantine regulations, also in shipping point inspection which is still being tested out. Mr. Read of the state office united with the commissioners in discussing this matter, and we were assured that the working out of this new plan and the securing of more perfect cooperation between shipper and horticultural commission in standardization would result from the conferences held.

The executive committee consists of: Commissioners Gould, Yolo County; Roullard, Fresno; Morris, Orange; Kellogg, Santa Barbara; Waite, Imperial.

The legislative committee consists of: Commissioners Ladd, San Joaquin County; Seulberger, Aameda; Gorton, San Diego; Butler, Napa; Brosius, Sacramento.

CALIFORNIA FARM BUREAU EGG LAYING CONTEST

Santa Cruz, October, 21.—In the 1920-21 contest, which is now in its last ten day lap, the race for second place is very close between S. L. Gibson and Geo. Gray of Santa Cruz. Gray's pen is now leading by seven eggs and the odds are against Gibson on account of one of his best layers

Mutual Husbandry Club

NOW BEING FORMED TO DEVELOP A

New Irrigation District in Fresno County

Let us tell you all the details of the Mutual Husbandry Club. There are thousands of acres of land in Fresno County with unlimited agricultural possibilities when put under irrigation.

We want 500 members to vote the district — more than 250 have already joined. Members of the Club can obtain land at dry land prices of $50.00 per acre. Big profits can be made when district is voted.

MAIL THIS COUPON TODAY

OVERLAND SHOE CO. RACINE, WIS.

Requesting your local merchant to stock articles advertised in the California Cultivator helps your town, the advertiser and the Cultivator.

being checked with a cold. The leading pen, the sure winners now, belonging to Hanson's Poultry Farm of Corvallis, Oregon, are again near the top of the list for highest production for the ten days. The highest pens for the ten days are:

Oregon Agricultural College, Corvallis, (Barred Rocks), 61 eggs; Hanson's Poultry Ranch, Corvallis, Oregon, 55; H. C. Kleinsmith (Barred Rocks) Hoff, Oregon, 53; Geo. Gray, Santa Cruz, 52; W. J. Neef, Santa Cruz, 52; S. L. Gibson, Santa Cruz, 48; E. D. Crewdson, Santa Cruz, 45.

The pullets in the new contest are laying strong, the 620 highest hens which are counted as competing having averaged 42.7 per cent for the past ten days. From present indications production will probably be on the decrease soon as quite a number of the pullets that have been laying are showing signs of drying up preparatory to a molt. This condition, which is to be expected, seems to be unpreventable as every precaution was taken this year to offset it. High pens for the ten days were:

Hanson, 78 eggs; Alex Stewart, Santa Cruz, 4; H. H. Corbett, Santa Cruz, 73; Sunrise Poultry Farm, Santa Cruz, 70; D. B. Walls, Petaluma, 70; J. J. Shore, Santa Cruz, 70; Neef, 70; Neef, 68; L. A. Thornewill, Santa Cruz, 65; Corvallis, 65; Gray, 65; Gray, 64; Crewdson, 64; Paul Tallman, Santa Cruz, 63.

Twenty-seven pens laid over 50 per cent while 15 laid over 60 per cent.—Max Kortum, Manager.

Holstein Breeders

Exhibitors and members of the Southern California Holstein-Friesian Association at the Southern California Fair.

SHORTHORNS SELL WELL AT FRISCO

The sixth annual sale of Shorthorns to be held under the auspices of the California Shorthorn Breeders Association took place at the California National Livestock Show and proved one of the most successful sales of the season. Thirty-two head of specially selected females and bulls were taken at an average of $312. Ten breeding establishments contributed the offering.

The white senior heifer calf offered by the Dibblee Estate made the top figure of the lot, being taken by the Blackhawk Ranch at $750. Ormondale Ranch sent through the top bull, Ormondale Radium 2d, senior champion of the show, that went to H. C. Muddux & Son of Sacramento for $525. This same firm was the heaviest buyer and the most persistent bidder.

Geo. H. Sawyer of Waterford made a number of excellent selections among them being the good roan senior bull calf sired by Gainford Matchless and consigned by the Caledonia Farms. The Newhall Land and Farming Company also figured prominently in the sale.

A gratifying feature of the auction was the support rendered by the various breeders.

Col. H. L. Hull of Iowa was on the block and Col. John Davis of Manteca assisted in the ring.

List of sales follows:

Blackhawk Ranch, Diablo

1, Victoria 5th, red and white, July, 1920; Est. Thos. B. Dibblee, Santa Barbara, $425.
28, Blackhawk Renown, bull, red, May, 1920; C. W. Tryon, Angels Camp, $300.

Wm. Bond, Newark

29, Cumberland Goods 2d, roan, Feb., 1920; C. L. Fulstone, Carson City, $250.
2, Mayfield Victoria, red, Apr., 1916; Caledonia Farms, West Sacramento, $400.
3, Cumberland Girl, roan, March, 1918, and roan c. c.; Williams Estate, Alameda, $250.
5, Maid of Roselawn, red, Feb., 1919; Newhall Land & Cattle Co., San Francisco, $160.

Caledonia Farms, West Sacramento

8, Bessie Sybil, roan, March, 1916; F. L. Gordon, Suisun, $210.
9, Kings Nanon, red, Jan., 1920; J. C. Jones, Alamo, $225.
10, Glenbrooks Memory 42d, red, March, 1920; Geo. H. Sawyer, Waterford, $300.
11, Sultan's Bessie, white, Jan., 1920; Geo. H. Sawyer, $525.
30, Matchless Lord, bull, roan, Sept., 1920; Geo. H. Sawyer, $410.

Estate of Thos. B. Dibblee, Santa Barbara

12, Ruby's Gem, white, Sept., 1920; Blackhawk Ranch, Diablo, $750.
13, Secret Sylvia, red, little white, June, 1920; H. C. Muddux & Son, Sacramento, $325.
31, Knight Avon, bull, white, June, 1920; Len Featherestone, Clements, $200.

T. S. Glide, Davis

14, Hillcrest Mary 4th, red, Oct., 1919; H. C. Muddux & Son, $250.
15, Hillcrest Flower 3d, roan, Sept., 1911; H. C. Muddux & Son, $425.

Straloch Farm, Davis

16, Hopland Vanilla 2d, Nov., 1916; Newhall Land & Cattle Co., $410.
17, Lady Lavender, Dec., 1919; Wm. B. Meese, Diablo, $375.
18, Milmar Lass, Sept., 1918; Geo. L. Proctor, Healdsburg, $335.
32, Straloch Adjutant, bull, roan, June, 1920; C. L. Fulstone, $250.

Jack London Ranch, Glen Ellen

19, Roselawns Last, roan, Dec., 1919; Newhall Land & Cattle Co., $175.
20, Village Girl, red and white, Nov., 1920; Newhall Land & Cattle Co., $150.
21, Alfa's White Tip, red, Sept., 1919; Newhall Land & Cattle Co., $160.
22, Sonoma Princess, red and white, Sept., 1919; Newhall Land & Cattle Co., $175.

Ormondale Ranch, Redwood City

23, Secrets Choice, red, Dec., 1913; T. T. Miller, Hollister, $325.
33, Ormondale Radium 2d, bull, roan, Feb., 1919; H. C. Muddux & Son, $525.
34, Ormondale Baron 3d, red, March, 1920; F. G. Stevnot, Carson Hill, $200.

Pacheco Cattle Co., Hollister

24, Cumberland Pacheco, white, March, 1919; Wm. B. Meese, $525.
25, Pacheco Lass 233d, roan, Sept., 1920; Newhall Land & Cattle Co., $250.

Howard Vaughn, Dixon

26, Red Lady, red, Apr., 1920; C. N. Hawkins, Hollister, $300.
27, Roan Princess, roan, Sept., 1920; Caledonia Farms, West Sacramento, $350.
35 Glenbrook Master, red, Nov., 1920; Jno. Clements, Clements, $185.

JERSEY BREEDERS ORGANIZE

The California Jersey breeders met at the Bellevue hotel, San Francisco, at 8:00 p. m., October 25, for the first time as the California Jersey Cattle Club, which is the name of the new organization that has just been perfected. The California Jersey Cattle Club now exists as a non-profit, non-stock corporation under the laws of California.

The directors and officers of the new organization are: President, Judge Peter J. Shields; vice president, Guy H. Miller; secretary, Professor V. C. Bryant; treasurer, N. H. Locke; J. H. Sawyer, M. Fortini, Arthur Purvine, H. G. Gross, E. E. Greenough.

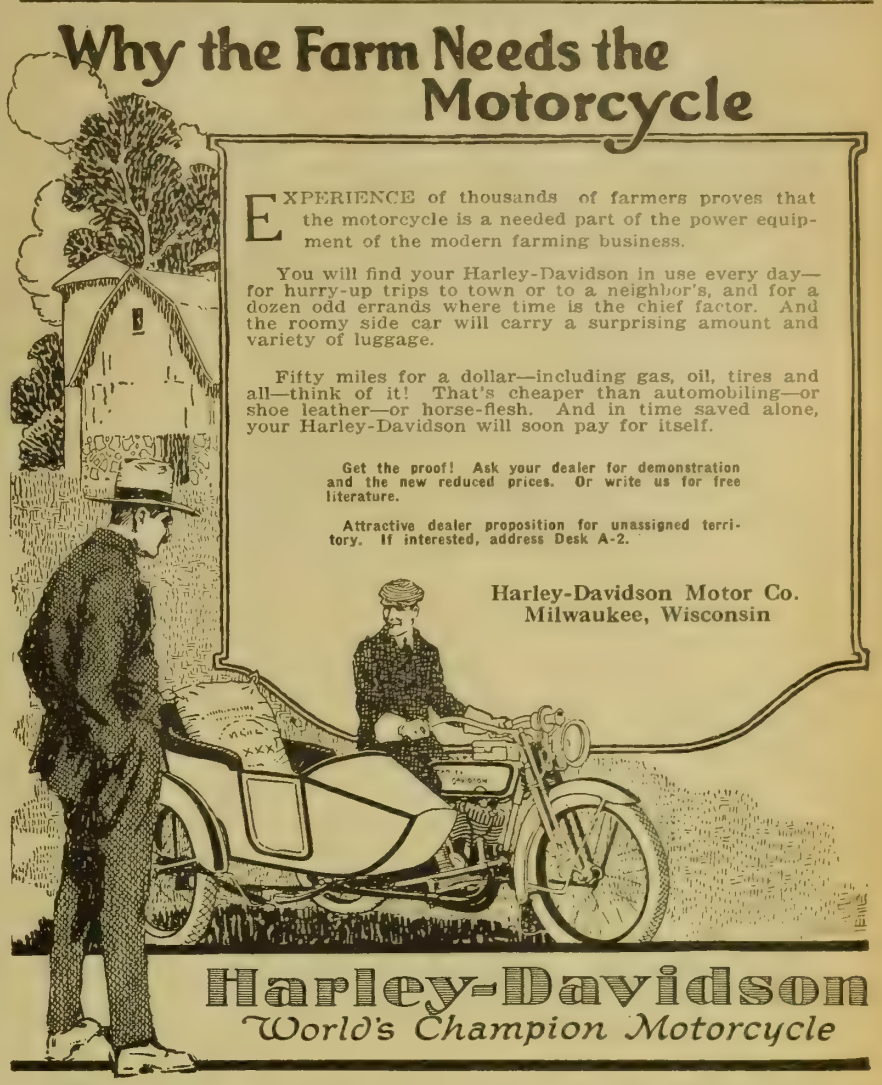
Plans were perfected for the organization of the Pacific Jersey Association which is to consist of breeders of Washington, Oregon and California. The purpose of this organization is to employ a field man to work for the Jerseys on the Pacific coast.

J. E. Thorp was appointed committeeman to take up organization of the Pacific Jersey Association with the breeders of Oregon and Washington during the Portland show and advise them that California is going forward with the plan.

Another meeting will be held during Stockmen's Week at Davis in February.

HOLSTEIN MEN ADOPT DELEGATE PLAN

Following the example of the leading farm organizations of this country the Holstein-Friesian Association of America adopted on October 11 at St. Paul, Minnesota, the delegate system of government in its association affairs, replacing by this action the proxy system of voting which has been in operation since 1880. Under the new plan each state constitutes an election district. Each district is entitled to one delegate and one additional delegate for every 200 members or majority fraction. All delegates have equal voting power. The delegates are nominated by the members of a district, any ten members having the right to put up their own ticket. These nominations are sent to the secretary 90 days before the annual meeting date which remaines, as previously, the first Wednesday in June. The delegates elect the officers of the association.



Why the Farm Needs the Motorcycle
EXPERIENCE of thousands of farmers proves that the motorcycle is a needed part of the power equipment of the modern farming business.
You will find your Harley-Davidson in use every day—for hurry-up trips to town or to a neighbor's, and for a dozen odd errands where time is the chief factor. And the roomy side car will carry a surprising amount and variety of luggage.
Fifty miles for a dollar—including gas, oil, tires and all—think of it! That's cheaper than automobiling—or shoe leather—or horse-flesh. And in time saved alone, your Harley-Davidson will soon pay for itself.
Get the proof! Ask your dealer for demonstration and the new reduced prices. Or write us for free literature.
Attractive dealer proposition for unassigned territory. If interested, address Desk A-2.

WESTERN CANADA

Land of Prosperity

offers to home seekers opportunities that cannot be secured elsewhere. The thousands of farmers from the United States who have accepted Canada's generous offer to settle on FREE homesteads or buy farm land in her provinces have been well repaid by bountiful crops. There is still available **on easy terms**

Fertile Land at $15 to $30 an Acre

—land similar to that which through many years **has yielded from 20 to 45 bushels of wheat to the acre**—oats, barley and flax also in great abundance, while **raising horses, cattle, sheep and hogs** is equally profitable. Hundreds of farmers in western Canada have raised crops in a single season worth more than the whole cost of their land. With such success comes prosperity, independence, good homes and all the comforts and conveniences which make life worth living.

Farm Gardens, Poultry, Dairying

are sources of income second only to grain growing and stock raising. Attractive climate, good neighbors, churches, schools, good markets, railroad facitities, rural telephone, etc.

For illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan, Alberta and British Columbia, reduced railway rates, etc., write

WHERE THE PUT-IT-OFFS ABIDE

My friend, have you heard of the town of Yawn
On the banks of the River Slow,
Where blooms the Wait-Awhile flower fair,,
And the soft Go-Easies grow?

It lies in the valley of What's-the-Use,
In the province of Let-Her-Slide,
That old Tired Feeling is native there;
It's the home of the listless I-Don't-Care,
Where the Put-It-Offs abide.

—Selected.

SAM WILDER'S MAHOGANY

By Edna A. Collamore in Youth's Companion

"THAT was a mighty fine apple dumpling, Em," remarked Sam Wilder as he energetically pushed his spoon round his plate in pursuit of the last few drops of sauce. "Talk about the kind mother used to make! Well, I'm free to admit that I never had such good victuals in my life as I've had since you came to keep house for me."

He nodded his head solemnly that his sister, the plump and placid Widow Bassett, might appreciate the weight of the compliment.

"I like to cook well enough," said his sister, sitting back comfortably in her chair; "trouble is, it seems like a waste of time to cook just for two."

"Dare say you'd like to cook for the whole neighborhood," said Sam, tilting back in his chair. "I never saw the beat of you for wanting to give things away. In the six months you've lived with me I've had to give more than I've given all the rest of my life put together."

"You've got such a lot of things you really don't need; it seems as if they ought to be doing somebody some good. Now, I was a-wondering just yesterday—" She paused.

"Em!" cried Sam, bringing the forelegs of his chair down to the floor with a thump. "If you don't stop your wondering, you'll land me in the poorhouse—that's what you'll do."

"It's that old bedroom set up in the garret," explained Mrs. Bassett, "the one Grandpa Wilder made. Seems as if it would be nice for Mabel and Ed to have that. I feel toward Mabel as if she were kin of mine, and Ed Slocumb is a nice boy. They'd like to get married, come October. Most of his money is in that little cottage he's building, and they're considerable bothered about furnishing it. If you don't feel that you can afford to give him the set, why, charge him something, five or six dollars. It's a pretty shape, and he could paint it over."

"Paint it- Good land, Em, that set's mahogany!"

"Mahogany? Cat's foot!" retorted Mrs. Bassett. "It's birch, with a little veneer on the top of it. I always despised veneer."

"Mahogany is mahogany, if it isn't a foot thick, and it's worth money!" said Sam hotly. He stood up as if to end the discussion. "I'm going over to that auction at South Warfield this afternoon, so I'm best be getting ready."

"If you are going to the auction, Sam Wilder," said Mrs. Bassett as she started to pile the dishes, "you watch and see how things get ridiculed and criticized the minute their owner is dead and gone. It's a sight better to give your odds and ends of furniture that you don't really need to a nice young couple who will take good care of them than to leave them to stand shabby and forlorn out in your front yard for strangers to dicker over and pass remarks about. That's my opinion."

"Well, it's my opinion that mahogany's just the same as money. I shouldn't wonder but what that old set was worth a lot. I'm going up to the garret now to look it over. Want to come?"

"No," said his sister. "The garret's like an oven, and I must get at my dishes."

As she busied herself about her work, going with swift steps from dining room to pantry, from kitchen to cellar, from dining room to kitchen, she resolutely ignored the sounds that came from overhead.

At last Sam Wilder, dust-covered, red-faced, perspiring, reappeared in the kitchen. "There!" he gasped. "That was a tussle, but I managed it. I've got every bit of that set out in the back yard. It is worth nigh on a hundred dollars, I bet. I'm going to have one of those corn-assures, as they call them, look it over. Catch me selling that for a measly five dollars! I guess not."

"Do just as you feel about it," said Mrs. Bassett amiably. "It didn't look like any great shakes to me. Ain't you afraid it will be stolen or rained on or something, out in that back yard—long's it's so valuable?"

"A gentle rain is just what it needs, to rinse off the dust!" called Sam from the bathroom, where he was noisily washing. "Do you want anything at the auction, Em?"

"Might have a few stone crocks, if you come across them. I like the old kind better than the new. I'm figuring on putting down a lot of pickles, the Ladies' Aid is so fond of them."

"Surprising how folks keep wanting more stuff," chuckled Sam. "Want to give away half the house, and then fill it up again."

"Nothing surprising about that," Mrs. Bassett retorted. "Seems to me that's the healthy way to live—keep getting and keep giving. Every time you get something, give something; then your house doesn't get cluttered, and your heart doesn't get choked."

"Nor your pocketbook, either," said Sam as he went out to the barn to harness.

Mrs. Bassett smiled contentedly. She sat down in the big rocker and fanned herself with her apron.

Her thoughts must have pleased her, for she nodded approval at them, one by one. Now and then, too, she looked out of the west window and scanned the horizon. Then she went to her room to array her round body in black-and-white dimity.

Her attire evidently astonished the young girl who knocked at the side door. "Why, Aunt Emma, I thought—Are you going out?" she asked.

"I know I invited you over so we could hem those napkins, Mabel," said Mrs. Bassett, "but it's too hot to sew. Anyway, I can do them evenings. I want you should go over to Mrs. Billings's with me. I need more red for that rug I'm making you, and she says she's got plenty I can have."

"It's a long walk in this heat," said Mabel,

"I feel like a long walk," replied Mrs. Bassett. "We don't need to walk home. Ed comes home that way, doesn't he? And Sam's over at South Warfield; I'll come back when he does."

"And the paper says showers."

"Is that so?" Mrs. Bassett looked interestedly out of the west window. "Then you help me shut up the house, and we will start off as quick as ever we can, so's to get there ahead of the shower."

Old Mrs. Billings, who was fond of visitors, enjoyed the call hugely. They examined together her big piece box and listened to the bits of town history that clung to the neat little rolls of cloth. Here was a bit of Joe Billings's army blanket; there, a piece of cloth Aunt Lucinda had woven out of wool that grew on the backs of her own sheep. With this red petticoat Martha Billings had flagged a train, the time of the big spring freshet. That blue cloth was from a coat that had been round the world twice; Mrs. Billings herself had worn it in the days when she sailed the seas with her sea captain husband.

The storm was upon them before they realized it, and there was a frantic rushing to close windows. Mrs. Billings called it a tempest, a "harricane," a "regular ring-tailed pealer." Mrs. Bassett said she rather liked a good hard rain.

"You'll be surprised what a change a brisk rain makes in the look of things," she said contentedly.

When, after an hour of pelting rain, the sun came out, Mrs. Bassett grew almost hilarious. "I just can't help laughing when I look at a rainbow," she explained. "They're so cheerful some way, and this hot sun will do wonders after that drenching, I can tell you."

New Lamp Burns 94% Air

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, V. N. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

"It will help the gardens," agreed Mrs. Billings. "Now I do hope you will stay to supper."

"I wish we could," said Mrs. Bassett, "but I've got Sam's supper to get. Mabel will ride home with Ed. He'll be along in a minute. I'm watching for him now."

The minute that Ed drove into sight she remarked, "I've got something to say to him," and in the same breath started for the door.

As the young people started on, Ed turned inquiringly toward Mabel. "Did you hear that?" he asked. "She told me she wanted me to step over this evening to fix a broken window cord, and she said if I dared to laugh at anything funny I happened to see she'd disown me. Queer, wasn't it?"

"She has seemed a little strange all afternoon," Mabel said; "but she's a dear, anyway."

A little later Sam picked up his sister, and they jogged serenely home. He had enjoyed the auction, which had been lively and sipirited. When they reached the house, Mrs. Bassett went in by the front door, so that the wet grass, she said, should not soil her skirts. She changed her dress, opened the windows and set about preparing supper. She did not glance out of the back windows.

Sam was somewhat glum as he sat down to supper. Now and then he cast a furtive and suspicious look at his placid, unperturbed sister. The "riz" biscuits, melon preserves and raspberry turnovers soothed but did not cheer him.

He rose at once when the meal was done.

"Now, Em," he said, "I want you to look out in the yard a minute. I've got something to show you."

It was a show—that once-prized mahogany. Its sober proportions were veiled and disfigured by intoxicated whirls and swirls and quirls of frenzied or frolicsome veneer. The chairs looked like prehistoric quadrupeds. The headboard of the bed was trying to face three ways at once. The footboard had slipped off its false raiment and showed a striped and spotted surface. The dresser had sprouted horns, hooked claws and a curling tail.

"Oh, your poor mahogany!" said Mrs. Bassett sympathetically.

"Did you ever see the beat of it?" he demanded. "Looks as if it were made in Bedlam, and finished off in the zoo."

"What a shame!" said a hearty young voice. It was Ed Slocumb, coming over to replace the broken window cord. "I'm awfully sorry, Mr. Wilder. Can't I help you mend it? I'd be glad to try."

"You can take the dratted thing off my hands, that's what you can do for me!" said Sam Wilder. "Throw it into the river. I don't want ever to see it or hear of it again, nuther. Here, I'll give you two dollars to cart it off and cut it up for kindling wood."

"Oh, I couldn't take your money! But I'd be glad of the set. I'll scrape it and polish it—fix it up. The lines are splendid, and it's well made."

"Well made!" snorted Sam in deep disguest.

"It's a shame that it got wet."

"Wasn't it?" said Mrs. Bassett pensively. "There I was calling way the other end of the town."

"Well, nobody was to blame for not foreseeing a storm like that." Mr. Wilder was considerably mollified by receiving sympathy when he had feared guffaws. "There's a big mirror upstairs you can have, Ed. if you'll see that nobody has a lot to say about these monstrosities. I hate to feel myself talked about. We won't mention this stuff again, any of us."

"Put it as a favor, if you like," said Ed Slocumb, "but I shan't forget to be grateful for your generosity."

"'Tain't generosity, it's self-defense," retorted Sam, starting for the barn.

"I don't name it a triumph of generosity, either," murmured Mrs. Bassett to the surrounding landscape. "I call it an outcome of diplomacy."

The Earlimart farm center of Tulare County will hold a one day farm management and accounting school under direction of the state university, date to be chosen some time in February.

The Kings City chamber of commerce is urging the state highway commission to proceed with grading and rocking of the Coalinga-San Lucas lateral.

"We Got It From the Watkins Man"

How often you have heard that said—or said it yourself! Perhaps about stock tonic—perhaps something entirely different. For there are 137 products in the Watkins line!

Did it ever occur to you how important a service your Watkins Dealer renders when he comes to your home with this long line of household and farm necessities? He saves you time—saves you trouble—makes buying easy and convenient.

Besides, he saves you money. Watkins products are sold only *direct to the user* through authorized Watkins Dealers The cost of selling this way is lower—and you benefit by the saving in buying from the Watkins Store at Your Door.

As for Watkins products, you are no doubt familiar with their exceptional quality. Most everyone is. They have been standbys in American farm homes for more than fifty years. Twenty million satisfied users swear by them today, and more than 4,500 Watkins Dealers are kept busy supplying the demand.

It pays to hold your orders till the Watkins Dealer calls at regular intervals. If one has not called recently, write to us—we'll gladly see that you are supplied.

Among the 137 Watkins Products are: Livestock and Poultry Preparations; Household Medicines, Liniments, Balsams; Spices, Extracts, Coffee, Baking Powder, Washing Compound, Tube Flavors; Soaps, Shaving Cream, Perfumes, Toilet Waters, Face Creams, Powders, Tooth Paste, Tooth Brushes; Automobile Supplies, Tires, Tubes, Spark Plugs, etc.

MORE WATKINS MEN NEEDED

to help supply the tremendous demand for Watkins quality products, comprising 137 household and farm necessities sold direct to the home. The experience of over 4,500 successful Watkins Dealers points the way to a real opportunity for you. Desirable territories, country and city, are open for responsible men who are capable of serving Watkins customers in the manner which has made this the largest and most successful company of its kind in the world.

Write today for full information regarding how you can become a Watkins Dealer and what it means to you.

HINTS FROM HOUSEKEEPERS

Quince Marmalade

It is time for quinces again, and since no one seems to have heard of the following combination I thought I'd like to pass it on. Have been making it myself now for two years and we like it very much.

Quince Marmalade — Take four medium to large quinces to one grapefruit of about the same size (other sizes of the fruit in proportion). Peel and core the quinces and remove the seeds from the grapefruit then put all through the food chopper. Put on to cook with a little water until all the fruit is thoroughly cooked. Then to each cup of fruit add ¾ cup of sugar and cook till done, about 15 minutes. This should stand for a few months before using to be at its best. —Mrs. V. F. Bogle, Walnut Grove.

Correction

I would like to correct the mistake in the recipe for cabbage pickle in your paper of October 22. It should be ½ gallon chopped onions instead of 2 gallons.—Mrs. Geo. Brill, Selma.

Vegetable Soup

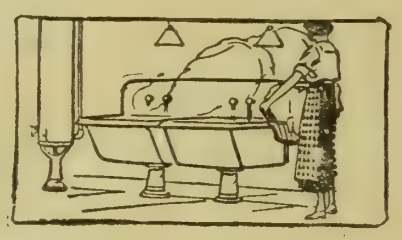
Three onions, three carrots, outside leaves of lettuce, one green pepper, clove of garlic, leaves and ends of celery, cauliflower and spinach, in fact, any vegetables you have, with two potatoes all cut into small pieces with three cups of water and simmer in a double boiler for two hours.

In a frying pan place a tablespoon of lard. When hot drop in 2 onions, 1 pepper and handful of parsley chopped fine. Cook 10 minutes, stirring occasionally and add to the soup. When dinner is ready add a pint of hot milk and serve. No meat or stock is necessary for this soup as it is very rich and well flavored. When cooking beans it is well to save the water and use it for making this soup. All water that vegetables are cooked in should be saved for soups or gravies. —Farmers Wife.

Why not Have

RUNNING WATER

In YOUR Home?



Running water is the most wonderful convenience you can possibly put into your home.

The Dayton electric driven water system will supply running water to your bathroom, laundry, kitchen, dairy, barns—anywhere else you want it.

The initial cost of a Dayton System is very moderate. The cost to operate is almost nothing.

Don't delay. Find out about the Dayton System immediately.

Ask your dealer to tell you about the Dayton.
If he cannot, write us for complete Literature.

FALL PRESERVES

By Mrs. Chas. C. Archer

The household department is always helpful. Now that the winter supply shelves are almost filled, perhaps a few recipes to help fill up the remaining vacant corners would be welcome.

Of course we nearly all make watermelon rind preserves, but here are some watermelon recipes which will give variety.

Watermelon Marmalade

Heart of 1 large ripe watermelon, cut into small squares, minus seeds and strings. Allow 2 lemons and ¾ pound sugar to each pound fruit. Cut lemons in slices and cook sugar, fruit and lemon together until syrup thickens. Crystallized ginger and walnuts added before removing from fire changes this into conserve.

Watermelon Meat Preserves

To 1 pound fruit use ¾ pound sugar. Select melons not too ripe and use only the heart. Take fruit and half of sugar and set over slow fire until fruit is saturated with sugar. Remove fruit and set in sun. Add other half of sugar to the syrup in the kettle and cook till a thick syrup. Put in fruit and allow to come to slow boil. Remove and put in jar. Cook syrup a few minutes longer and then pour over the fruit.

Cantaloupe Pickle

Select melons not quite ripe. Halve, scrape out seeds, peel and cut meat in squares. This recipe calls for 4 pounds of the cantaloupe meat. Let lie in brine over night. Next day boil the fruit in a weak alum water (about ½ level teaspoon powdered alum), until transparent. Drain, and rinse fruit in clear water. Make a syrup of 3 pints sugar and 1 quart vinegar. Add 2 tablespoons cloves and 4 tablespoons cinnamon. Let come to boil, drop in fruit, which has been wiped dry after it was rinsed. Boil 20 minutes. Put in jars. The longer it is kept the better it becomes.

Cantaloupe Preserves

To 1 pound cantaloupe use ¾ pound sugar. Prepare in same manner as the cantaloupe pickle, only omitting the vinegar. After making a syrup of the sugar and fruit add allspice, cloves and cinnamon to taste. Cook fruit 20 minutes. Then remove from the syrup. ' Cook syrup until thick, then pour over the fruit in the jars.

Plum Sweetmeat

Six pounds plums (after pitting), 6 pounds sugar. Run 3 oranges and 1 lemon through the meat chopper. Add to plums, together with 2 pounds seeded raisins and 1 pound chopped nuts. Boil slowly until the consistency of jelly. Put in glasses. If plums are very tart use all oranges, omitting the lemon. Some also prefer to omit the nuts.

Tomato Jam

Tomatoes are always inexpensive and abundant in the fall and here is a century old recipe called Mrs. Hodges' special tomato jam. 8 pounds ripe tomatoes peeled and cut in slices, 4 pounds sugar, 1 pint vinegar. Tie in loose meshed bag 1 tablespoon each whole cloves and pepper corns and 6 blades mace. Let all come to good boil. Set back and let cook very slowly, till thick and rich, 4 or 5 hours or longer. Remove spices. Pour into glasses. Owing to the juice in the tomatoes and the vinegar which must be boiled down by long cooking, this only makes a few glasses.

Another Tomato Jam

Here is another one, which is less rich.

Quarter 10 pounds of small uniform sized ripe tomatoes. Add 5 pounds sugar, 1 quart vinegar. Put in bag 1 tablespoon each whole cloves, stick cinnamon and allspice. Boil all gently three hours. Remove spices. Can in small sized jars. Tomatoes may be peeled or unpeeled.

SOME RICE RECIPES

Savory Rice—This dish may be varied in countless ways. First have the rice well cooked; it should be well washed and dropped into rapidly boiling water which has been salted, and allowed to cook until every grain stands out by itself, is tender and yet not mushy. Now take a cupful of cooked rice, put a layer of it in a well buttered dish, then cover with a small layer of chopped chicken giblets or any minced meat, with a broth of white sauce well seasoned and added with each layer. Bake until thoroughly hot, and serve as a main dish or as a substitute for meat. Tomatoes, with onion and a little chopped beef and rice, prepared in this way is another good dish.

Swedish Rice—Boil a cupful of rice until tender in salted water. Drain and dry in the oven. Stir into it two tablespoonfuls of sweet fat, the yolks of two eggs well beaten, a teaspoonful of onion juice, and salt and pepper to taste. Stir over the fire in a dish set in hot water, using a fork to stir with. Turn into a round bowl to mold, then unmold on a platter and heat in the oven. Serve with drawn butter sauce.

Rice with Eggs—Take a quarter of a cupful of washed and drained rice; add a tablespoonful of sweet fat and stir until a light yellow over the heat. Add broth, potato or any other vegetable water, and cook covered until the rice is tender; then season well and stir in two or three fresh eggs; Stir until cooked, then serve at once. This dish tastes like scrambled eggs, but a very few eggs need be used to serve five. Milk may take the place of the broth in cooking the rice. Skim milk may be used in many such dishes to advantage.

Other Uses—A small amount of boiled rice added to gems, muffins or griddle cakes improves them. Plain boiled rice dressed as mashed potato will serve as a vegetable with steak. Rice made into cakes and fried, or into croquettes and served with a sauce, are well liked dishes.

NELL SAVES NELL'S LIFE

The sort of friendship that counts was shown by a dog on the company farm of the General Electric Company at Schenectady, New York, for one of the farm horses. Discovering her chum stalled one night and in danger of strangling to death, the dog roused the foreman of the farm and led him to the stable where the horse lay groaning in her stall.

Both animals are named Nell, and they have been pals for many months past. Almost every night Nell, the dog, will watch for the return of Nell, the horse, waiting half the afternoon for the big gray team, of which Nell is one, to come back from work.

One night about ten o'clock, as Jake Clinton, foreman at the farm, was about to retire, he heard a commotion outside the farm-house, which is two or three hundred feet from the stables. Nell, the dog, was barking and howling persistently and kept it up until Clinton went to the porch to see what was wrong.

The moment she saw him, Nell began to bark excitedly, and dashed toward the stables, then back toward the man, then toward the stables again, keeping up her barking all the time. Clinton followed her to the stables and to Nellie's stall.

There he found the mare on her back, her hind legs wedged into the next stall, her halter drawn tight. She was quite helpless, and in a few hours, perhaps less than an hour, she would have been dead.

Clinton hurriedly summoned help from one of the near-by factory buildings and soon had the horse released and on her feet, out of danger. The moment she saw the horse freed, Nell, the dog, exhibited keen delight, frisking about and barking loudly. It was found that she was the only one of four dogs that were all in the stable together at the time, to notice the distress of the horse, and endeavor to bring help.

The dog was picked up a waif by one of the vice-presidents of the General Electric Company, G. E. Emmons, as he returned home late one evening. Nell, then only a pup, was lying among some leaves by the sidewalk. She crawled up to Mr. Emmons and seemed to be anxious to make friends. Mr. Emmons took her into the house and a few days later gave her into the

The Cultivator Patterns

3527. Ladies' Dress.—Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38 inch size requires 6¼ yards of 44 inch material. The width of the skirt with plaits extended is about 2¾ yards. Price 10 cents.

3441. A Set of "Short Clothes."—Cut in five sizes: 6 months, 1, 2, 3 and 4 years. A 2 year size will require 3⅜ yards of 27 inch material for the Dress, 1¾ yard for the Slip, and 1 yard for the Drawers. Price 10 cents.

3765. Ladies' Apron.—Cut in four sizes: Small, medium, large and extra large. A medium size requires 3⅛ yards of 36 inch material. Price 10 cents.

3781. Girl's Jumper Dress.—Cut in four sizes: 8, 10, 12 and 14 years. A 12 year size will require 4½ yards of 40 inch material. Price 10 cents.

3735. Misses' Dress.—Cut in three sizes: 16, 18 and 20 years. An 18 year size requires 5½ yards of 44 inch material. Price 10 cents.

3769. Little Tot's Dress.—Cut in four sizes: 1, 2, 4 and 5 years. A 4 year size requires 2¼ yards of 40 inch material. Price 10 cents.

keeping of R. N. Ramsay, gardener in charge of the farm, to be brought up. She was taken to the company farm, and there made the acquaintance of Nell, the horse, whose life she was to save a few months later.

PERSPIRATION PLUS EDUCATION

Ten years ago a Missouri boy, named William Howell, was working his way through the college of agriculture at the University of Missouri. He got out of bed early in the morning to attend furnaces and waited tables to pay for his board. Likewise he did good work in school, especially in animal husbandry and dairying.

In his senior year he was a member of Missouri's dairy judging team that won first place at the National Dairy Show. Hard work and early rising had only strengthened his standing with faculty and students at the Missouri college of agriculture, for it's a working school.

After his graduation Howell went into extension work in the South and a year ago was placed in charge of the animal husbandry classes and the school dairy at the Sixth District Agricultural and Mechanical School for boys and girls at Barnesville, Georgia. Here he found a herd of 24 cows that were losing the institution $23.50 a month. He cleaned up the dairy barn and instituted the individual tests and individual feeding. In five months, by the elimination of the boarders, the herd had been reduced to 15 cows and the milk flow of these had been increased 78 per cent. From a loss of $23.50, the net monthly balance of the school dairy had been turned to a profit of $410. Still rising early and working hard this Missourian was turning to practical use his college training.

All that was but incidental to his work of teaching profitable dairy methods to the farm boys and girls of the Georgia Sixth District. The team of boys that he trained in stock judging that fall went to the International at Chicago and won first place in competition with similar teams from the entire country.

And now comes the news that William H. Howell has been employed as manager of Georgia's largest private herd of purebred Guernseys. With home, garden, dairy products and a car furnished, he gets a cash salary of $4,000 a year. He still gets up at 4 o'clock in the morning and thrives at it. He has learned to think without forgetting how to work.

AMERICAN INDIANS AID ARMENIANS

It is the irony of fate that one of the oldest civilizations on the earth today is partly dependent for existence on one of the youngest civilizations. Indian maize, the contribution of the American aborigines to agriculture, is now feeding starving thousands in Armenia and the Holy Lands. And American Indians, the last remnants of famous and once strong tribes, are contributing quantities of corn and other grain to the support of Armenian women and children.

The Omaha tribe, which occupies the Omaha Indian reservation in Nebraska, has agreed to support one Armenian child. The Winnebago tribe supports several others and recently four Indian boys attending the Genoa Industrial school each assumed the responsibility of supporting an Armenian child. These Indians, many of whom are farmers, are cooperating in the nation wide grain campaign being conducted by the Near East Relief to collect five million bushels of grain for the relief of orphans and refugees overseas.

Everywhere American farmers are helping in this mercy work. The grain is rolling in to elevators and is being collected and milled into food products. But if the goal is to be reached it must come faster still, especially during October. Winter starts early in Armenia and the grain must be quickly transported across the Atlantic in order to prevent widespread starvation. Your contribution is desperately needed today. Will you join these Indian farmers in their mercy work?—Near East Relief Grain Campaign, 700 Kansas Avenue, Topeka, Kansas.

Truly great persons are often insignficant in their own estimation. But not so with the pewee who apes the giant.

No Disappointments

Millions of housewives use Calumet Baking Powder because of its dependability—because when they place their baking in the oven, they know it will "turn out" all right. They are confident of results because they know that no matter what they bake—pies, cakes, biscuits, muffins—the results will be the same—light, perfectly raised, wholesome foods.

CALUMET
BAKING POWDER

never disappoints. Don't prepare bakings with expensive ingredients and then have them spoiled because of an inferior leavener.

Have the same assurance that the majority of other housewives have.

A pound can of Calumet contains full 16 ounces. Some baking powders come in 12 ounce instead of 16 ounce cans. Be sure you get a pound when you want it.

32 Roselawn Shorthorns

At Public Auction

Roselawn Stock Farm

Owned by H. M. ELBERG

Woodland, California

Wednesday, November 16

At 1 P.M.

Village Beauty E

ROSELAWN SHORTHORNS, one of the longest established herds in the west, have for many years been held in the highest esteem by buyers of dependable Shorthorns.

Directed by constructive breeding practice, and by progressive business methods, the herd has consistently merited its high place among the units of the breed in the west.

Since its last public sale in 1919 the herd has multiplied upon itself and has been strengthened by the addition of choice individuals of fashionable pedigree, until the owner is again in position to offer at public sale a class of Shorthorns that will fully maintain the high standard of the herd.

The offering contains both Scotch and Scotch topped cattle, including cows with calves at foot, bred and open heifers, and a limited number of good young bulls.

Guaranteed Breeders—Tuberculin Tested

TERMS OF SALE: Responsible parties may arrange for credit, with the sale managers, on the basis of one-half cash, balance in six months, with approved notes bearing eight per cent interest, all credit arrangements to be made prior to sale.

Tosantos Walker Mead

Born December 9, 1919
Exceptional Yearly Record Backing

His five nearest dams average over 1,000 lbs. butter in a year. He is out of a wonderful daughter of Prince Gelsche Walker and Sir Aaggie Mead De Kol. He is a show bull and is priced for immediate sale.

E. D. BARRY, JR. Workman and Azusa Ave., Covina, Cal.

Holsteins at the Southern California Fair

By R. A. Condee

IN BOTH quality and number the Holstein classes at the Riverside show this year surpassed all other livestock displays and brought together some of the best Holsteins in the west. Judge W. H. Standish of Lyons, Ohio, who placed the awards in this class, was high in his praise of the quality he found in the Holstein division.

The aged bull class brought out four good animals. The judge soon found the top in King Segis Pontiac Jannek, owned by the Santa Monica Dairy Company, and later made this bull senior and grand champion in the class. Jannek is a real show bull with splendid shoulders, massive middle, great size and stretch, lots of quality and a great dairy head. This bull is one of the outstanding show bulls of the state and is sure to bring high honors to his owners in whatever company he is shown. The second prize in aged bull class was Prince Aralia, shown by Robert N. Clapp of Nuevo, a good bodied bull but outclassed in such warm company as Jannek furnished. Bost and Johnstone came in for third place with a good bull, and had he been fitted he might have given the Clapp entry a stronger fight. Fourth place was taken by that wonderful breeding bull, King Pontiac Netherland Segis 3rd, also shown in rather rough condition after a heavy breeding season.

Four outstanding two year old bulls faced Judge Standish and kept him guessing for a few minutes. After placing this class, the judge announced to the breeders that this was the best lot of two year old Holstein bulls he had handled this season after judging at 18 state fairs. Sierra Vista Stock Ranch of Perris placed first in this class with Sir Ormsby Skylark Rauwerd, a splendid bull in size, quality and outstanding Holstein type. K. S. P. J. Count, the Clapp entry, placed second, and here also was a great show bull sired by the grand champion at this show, King Segis Pontiac Jannek. Carl Ray of Lankershim drew third place with Prince Julianna Fayne, a bull that would make keen competition in any show. Mrs. Peale Penrose of Pomona was given fourth on her herd sire, Republic Tuebie Korndyke, a grandson of the now famous bull Allenvail Cornucopia Paul. This bull was shown out of condition, but even in his rough state showed great quality and promises to make some keen competition in the three year old class next season.

The senior yearling bull class brought out some outstanding animals. First went to Sir Ormsby Hengerveld Skylark, shown by Maxwell Farms, Hollywood, a wonderful young Holstein and one of the best prospects for bull honors at future shows. This bull was shown in the usual Maxwell form which always means the best. Offering the strongest competition to the Maxwell bull was the Robert N. Clapp senior yearling bull, King Segis Pontiac Aero, placed second in the class, a bull of outstanding quality, sired by King Segis Pontiac and a grandson of the famous three time National Dairy Show grand champion, Paul Calamo Korndyke.

First junior yearling bull went to Dichter Spofford Korndyke Vale, shown by E. G. Stinson of Orange, a son of the this year's grand champion at the California state fair and the first junior yearling at the same show.

The senior bull calves shown were so uniformily good the Holstein talent at the ringside was unable to agree on a top. Judge Standish after a great deal of careful work placed the Ed Stalder calf, Nuevo De Kol Ormsby, first with Berylwood Fobes Korndyke, exhibited by Berylwood Stock Farm, Hueneme, second, with the Sierra Vista Ranch entry third, and Maxwell Farms fourth.

In the junior bull calf class the Berylwood Farm entry, Prince Alcartra Walker Segis, handled by that master show ring expert, Jack Shillcock, carried off first honors and later junior champion, with the Sierra Vista calf second, Maxwell Farm third, and Clapp fourth. The Holstein fans at the ringside all agreed that this was the best class of junior bull calves ever brought together at a California show.

The real fight for honors came in the aged cow class where a string of cows that would do credit to a national show lined up before the judge. Ringside picking was very lively in this class, and there were almost as many tops picked as there were cows in the ring. Judge Standish gave first place to Segis Walker Gelsche, shown by Robert N. Clapp, a wonderful old show cow but not in best condition for showing; second went to the great Maxwell cow, Joy Hengerveld Clothilde; third to Nancy Calamo Korndyke, another Clapp entry, and fourth to the Fred Hartsook Ranch, Lankershim, cow De Kol Reka Ormsby. Anyone of these cows could have been placed first and senior champion cow in any show in the country and left the judge a good reputation.

The three year, two year and senior yearling heifer classes brought out some wonderful individuals, and the judge many times regretted there were not more ribbons to hand out. An outstanding senior heifer calf, Nuevo Aralia Rowena Ormsby, was shown by Ed Stalder and placed first in a hot class of senior calves. The junior heifer calf, Caronlie Wayne Fayne, shown by the Hartsook Ranch, was the first in the class and later was made junior champion. This calf promises great things under the skilful care of Manager Earl Sturgis.

Knows Value of Pure Bred Boar

By Harvey M. Berglund

MANY farmers in California are today using scrub boars for no other reason than that they do not know the real value to them of a pure bred sire. Of course, there are conditions that may vary this value in individual cases, but the results will always be more profitable with a pure bred than with a scrub. Most every community holds instances where hog raisers have materially increased their profits through the use of a well bred boar, but few men have more clearly demonstrated the increased value than has W. C. Scott, a stock raiser in western Yolo County.

The experience of Mr. Scott should be particularly interesting to men interested in hog raising, for two reasons. In the first place, he kept accurate account of his operations with two lots of hogs and, secondly, both lots were handled under ordinary range conditions and were kept together from the time the second lot was farrowed.

The real beginning of this story goes back to the summer of 1919 when Mr. Scott decided to try out for his own information, and in his own way, a pure bred boar. For a good many years he had been raising hogs in a rather large way, but until that summer he could never quite bring himself to the point of buying a pure bred boar. Hogs were hogs, and, anyway, he thought that under his conditions one kind of a boar would be about as good as another. He sure didn't want anything fancy. Well, he finally purchased a registered Duroc-Jersey.

This boar was bred to a number of native sows and during December, 1919, and January and February, 1920, his first crop of pigs was farrowed. At that time Mr. Scott had on hand 36 shotes that had been farrowed during December, 1918, and the first two months of 1919. These shotes, together with the sows that had been bred to the pure bred boar, were running together and continued so after the sows had farrowed. The shotes, sows and pigs were kept on a hill pasture with plenty of green feed and what acorns they could pick up. They were run in that way until June, 1920,

when they were turned on barley stubble, where they remained until January, 1921. At that time there were 56 in lot one and 54 (the pigs sired by the pure bred boar) in lot two. Both lots were weighed and then put on a self feeder containing rolled barley.

At the time of starting on the self fed ration lot one averaged 159 pounds and lot two averaged 166 pounds. Both lots were fed 24 days and lot one averaged 203 pounds and lot two averaged 216 pounds. At the close of the feeding period the hogs in lot one averaged 24 to 26 months old and those in lot two were 11 to 13 months old.

The conclusions from Mr. Scott's experience are obvious. The pigs sired by the pure bred boar outgrew the scrubs. Mr. Scott declares that from now on he will never use anything but a pure bred boar. A year of time, increased weight and a premium on the market ought to mean a lot just now. The boar did not happen to be a $100 boar at that.

SUNFLOWER SILAGE

R. E. Neidig and L. E. Vance of the Idaho experiment station have published the results of silage experiments with sunflowers. In many parts of the Pacific Northwest the selection of a suitable crop for silage purposes is a matter of some difficulty because of the variable climatic conditions. New crops that are more or less resistant to drouth and that will yield a heavy crop of green material are greatly desired for this purpose. The results obtained by Arnett and Tretsven in 1917 on sunflower silage were so encouraging that the Idaho experiment station started to grow for silage. During the early part of September, 1918, the sunflowers were cut and made into silage, and it was with the said silage that the authors undertook chemical experiments with special attention paid to the acid formation. The composition of sunflower silage compares very favorably with that of maize silage. No data are at present available on the digestion coefficients of the sunflower silage. Practical feeding, however, indicates that it is equal to maize silage for many purposes, and may quite well be used as a good substitute in districts where maize can not be grown.

JUDGING SHEEP

Improvement of the sheep industry depends to a great extent upon a more general understanding of what constitutes an inferior animal and a broader appreciation of the methods of judging individuals by a study of their external parts. It is probably true, in the opinion of animal husbandry experts in the United States department of agriculture, that the average person knows less about the methods to follow and the points to look for in judging sheep than with most other types of livestock.

To meet the need for a better knowledge of sheep qualities the department has issued a new Farmers' Bulletin, No. 1199, Judging Sheep, in which the essentials of sheep judging are explained, a score card is given, with illustrated explanations of how to use it, and full directions are given on such special subjects as judging the age of sheep by the teeth and the location of market cuts in the carcass. The bulletin will be sent free on request to the department.

ANNUAL OF SOUTHERN CALIFORNIA HOLSTEIN FRIESIAN ASSOCIATION

The annual meeting of the Southern California Holstein-Friesian Association was held during the Southern California fair at Riverside and was attended by a large number of Southern California Holstein breeders. The following officers were elected for the coming year: President, Robert N. Clapp, Nuevo; treasurer, William R. Harriman, Hondo; secretary, Robert A. Condee, Chino. Executive committee: Frank E. Pellissier, Whittier; E. H. Agee, Rivera. Extensions and awards committee: J. W. Snodgrass, Hueneme; Jack Klein, Hollywood; Earl Sturgis, Lankershim.

Plans for the year include a membership drive and special work through the schools and the extension department of the University of California in forming calf clubs in Southern California.

Nearly every farmer has unsalable roughage that makes good feed if ground, chopped or shredded and mixed with oats, corn, kaffir, or alfalfa. Mixtures of any kind in which are utilized one or more of these unsalable products create a big saving.

Before preparing land, see that the plow points and disks are sharp. A good grindstone hooked onto a small engine will do the work in quick time.

88 REGISTERED HOLSTEINS 88
AT PUBLIC AUCTION

Palo Alto Stock Farm
Palo Alto, Calif.
Wednesday, November 9
at 10 A.M.

This offering, the first individual public sale from this well known herd, is composed very largely of young cows and heifers of famous blood lines, many with excellent short or long time records, or both, and includes a large number of daughters of

KING PONTIAC SEGIS KORNDYKE, who now has 31 A. R. O. daughters. He is a 30-pound son of King Segis De Kol Korndyke, full brother to King Segis Pontiac.

FINDERNE KORNDYKE NETHERLAND, a son of King Pontiac Segis Korndyke, out of a 31-lb. daughter of Gordon Glen Pontiac.

CARNATION SEGIS WALKER, a son of Johanna McKinley Segis, out of a paternal sister to Segis Pietertje Prospect, the world's record milk cow.

RAG APPLE IMPERIAL KORNDYKE, proven son of Rag Apple Korndyke, and whose daughters are now making some excellent long time records.

This sale affords a great opportunity for selection of young females bred in some of the greatest producing lines of the breed.

EVERY ANIMAL POSITIVELY GUARANTEED TO BE A BREEDER; EVERY ANIMAL OVER SIX MONTHS OLD TUBERCULIN TESTED AND SOLD SUBJECT TO RETEST BY THE BUYER.

Sir Aaggie DeKol Mead

Bred in the richest Aaggie Acme-De Kol of Valley Mead cross, he should be one of the greatest young sires of the breed.

Five of his seven nearest dams average:

Butter	2 Years	2,040.97	Pounds
Milk	2 Years	41,547.20	Pounds
Butter	1 Year	1,130.66	Pounds
Milk	1 Year	23,096.60	Pounds

His seven nearest dams average:

Butter	7 Days	30.47	Pounds
Milk	7 Days	627.60	Pounds

His calves are just what we could expect from a long succession of great sires and dams, and in their present state of development fulfill every promise in the pedigree of their great sire.

Good business judgment will eventually prompt you to place at the head of your herd a bull of Aaggie Acme-De Kol of Valley Mead breeding.

CALIFORNIA'S GREATEST LIVESTOCK EFFORT

(Continued From Page 463.)

show and was expected to win the final purple. However, when it came to the senior championship she was set down below the winning two year old, a good sort, to be sure, but in no way as satisfactory a kind as the Jacks cow. Bocaldo Beauty at least had the satisfaction of downing Lady Joy 2d, grand champion at Portland last year.

The 11 two year olds staged one of the best shows seen in the west. The judge favored the Cook entry, a heifer of considerable scale, a bit off the ground and fronted with a head that lacked sweetness, but quite well covered, over the undeniably attractive Ruth Domino, very deep and very thick and very sweet. Howard was forced to take third rating with his good heifer that won her class at Sacramento. She is a good kind and were she a little smoother about the tail would go far in most any company. Ken-Caryl was fourth with a heifer that handled well over a deeper, well balanced but somewhat smaller heifer from the Rule herd.

Prior "dope" was rather upset when the eight senior yearlings were up for adjucation. Cook came out winner with a rather plain sort that had the redeeming factor of size. Baldwin was in second and Briggs was third, reversing the order at Sacramento, while the state fair winner was set down to fourth place. Some of the "talent" is still trying to "savvy" the placings. Howard was fifth with a heifer that has a lot of style but rather too much daylight under her.

Fifteen cracking good junior yearlings staged as pretty a battle as one would care to see. When the smoke cleared away Cazier's Standard Eyes 4th, was wearing the blue. Howard was in second with a heifer that handled none too well, and Briggs held down third place with his lovely Miss Donald 34th. This last named heifer has made a marvelous improvement since the state fair and she had friends for a higher rating. Cazier was fourth with a mighty sweet little lady that was somewhat handicapped in size. Ken-Caryl was fifth and Cook sixth.

The 17 senior heifers made up the largest Hereford class yet seen in this state. Cazier won the top two ratings with heifers of nice type, the first having the attractive head, stronger top, more substance and greater size. Cook was in third with a nice young thing, and the University, showing the largest one in the class, landed fourth, its entry being a bit up in the air and lacking in bone.

The junior heifers made an attractive class but not especially strong.

Exhibitors: H. A. Balwin, Pleasanton; H. M. Barngrover, Taylorsville; A. H. Barnum, Moro, Oregon; Wm. Briggs & Son, Dixon; John A. Bunting, Jr., Mission San Jose; J. H. Cazier & Sons Co., Wells, Nevada; A. B. Cook, Townsend, Montana; Diablo Stock Farm, Danville; H. H. Gable, Esparto; Chas. S. Howard, Willits; Frank R. Howard, Willits; Romie C. Jacks, Monterey; Ken-Caryl Ranch Co., Littleton, Colorado; John B. McNerney & Sons, Carleton, Oregon; Mission Hereford Farm, Mission San Jose; Chas. Rule, Jenner; Sierra Vista Vineyard Co., Minturn; Henry Thiessen, Sweetwater, Idaho; University of California, Davis.

The awards follow:

Aged bull—1, Roe-Hampton 34th, Rule; 2, Beau Blanchard 48th, McNerney; 3, Carlos 146th, Ken-Caryl; 4, Junior Grove, Diablo Stock; 5, Woodford 34th, Jacks; 6, Frederick Fairfax, Sierra Vista.

Two year olds—Panama 110th, Cook; 2, Marcus Fairfax, Ken-Caryl; 3, The Peer, Mission; 4, Beau Carlos 29th, Cook; 5, Lincoln Domino, Briggs.

Senior yearling bull—1, Panama 126th, Cook; 2, Real Patrician, Barngrover; 3, Rupert's Model 14th, Thiessen; 4, Louis Fairfax, Gable; 5, Donald Blanchard, McNerney; 6, Crimean 1st, Jacks.

Junior yearling bull—1, Blanchard 1st, Cazier; 2, Don Domino, Baldwin; 3, Panama 129th, Cook; 4, Mischief Fairfax, Howard; 5, Rupert's Model 19th, Thiessen; 6, Sonoma 21st, Rule.

Senior bull calf—1, Panama 140th, Cook; 2, Blanchard 4th, Cazier; 3, Laurel Perfection 2d, Jacks; 4, Mission Wing, Bunting; 5, Glenwood, Jacks; 6, Blanchard Donald, McNerney.

Junior bull calf—1, Dales Rupert, Briggs; 2, Mission Van, Mission; 3, Red Rupert, Briggs; 4, J. C. Fairfax, Ken-Caryl; 5, Marvel's Pride 15th, Diablo; 6, Beau Panama 11th, Cook.

Aged cow and calf—1, Miss Joy, Cook; 2, Empress Fairfax, McNerney; 3, Dixie Queen, Barngrover.

Aged cow—1, Bocaldo Beauty, Jacks; 2, Lady Joy 2d, Cook; 3, Vanity Belle, Thiessen; 4, Dorothy, Ken-Caryl; 5, Anxiety Fairfax, Gable.

Two year olds—1, Princess Panama 2d, Cook; 2, Ruth Domino, Jacks; 3, Belle Donald 21st, Howard; 4, Queen's Mischief, Ken-Caryl; 5, Queen Stanley 2d, Rule.

Senior yearling heifer—1, Lady Panama 95th, Cook; 2, Pansy Domino, Baldwin; 3, Miss Donald 31st, Briggs; 4, Carnation 4th, Cazier; 5, Miss Mansell 159th, Howard; 6, Perfect Queen 30th, Thiessen.

Junior yearling heifer—1, Standard Eyes 4th, Cazier; 2, Lady Fairfax 20th, Howard; 3, Miss Donald 34th, Briggs; 4, Aurora 2d, Cazier; 5, Duchess Domino, Ken-Caryl; 6, Lady Panama 100th, Cook.

Senior heifer calf—1, Aloha 2d, Cazier; 2, Miss Defiance 7th, Cazier; 3, Lady Panama 105th, Cook; 4, Ora Fairfax, California; 5, Rebecca 2d, Ken-Caryl; 6, Bonnie May, Thiessen.

Junior heifer calf—1, Bonnie Jane, Thiessen; 2, Lady Panama 108th, Cook; 3, Sylvia Fairfax, Ken-Caryl; 4, Miss Bonnie Lad, Barnum; 5, Mischievous 35th, Rule; 6, Mabel Blanchard 2d, McNerney.

Senior champion bull—Panama 110th; reserve, Rochampton 34th.

Junior champion bull—Blanchard 1st; reserve, Panama 140th.

Senior champion cow—Bocaldo Beauty; reserve, Princess Panama 2d.

Junior champion heifer—Lady Panama 95th; reserve, Standard Eyes 4th.

Grand champion bull—Blanchard 1st; reserve, Panama 110th.

Grand champion female—Lady Panama 95th; reserve, Bocaldo Beauty.

Aged herd—1, Cook; 2, Ken-Caryl; 3, Thiessen; 4, Jacks.

Breeders' young herd—1, Cazier; 2, Cook; 3, Thiessen; 4, Barngrower.

Calf herd—1, Cazier; 2, Cook; 3, Thiessen; 4, Mission.

Get of sire (4)—1, Cook; 2, Cazier; 3, Thiessen; 4, Barngrower.

Produce of dam (2)—1, Cook; 2, Barngrower; 3, Thiessen; 4, McNerney.

The Shorthorns

While the Shorthorn exhibitors did not muster as many entries as their Whiteface contemporaries they pointed with a great deal of pride to the fact that they had almost as many and that it was a straight California Shorthorn show. Most of the herds had met at Sacramento earlier in the season but at the final show they were forced to measure strength with several new exhibitors and as a consequence several changes developed from the Sacramento placings. Dean C. F. Curtiss of the Iowa state agricultural college, a Shorthorn breeder of international fame and the president of the world's greatest livestock show, the International, officiated as judge and succeeded in allotting the various awards in a manner that left few sore spots. On the whole the judging was more satisfactory than at the state fair.

Five aged bulls opened up the Shorthorn festivities. Blackhawk Villager, five days too old to show as a two year old, and last year's champion at Los Angeles, was rather outstanding because of his admirable type, though it was admitted that he could have carried considerably more flesh. He is surely a bull of rare character and quality. The red imported Scottish Lord went into second over the somewhat smaller but thick and smooth fellow shown by Vaughn. Pacheco was fourth and Miller was fifth.

The three two year olds yielded to the very low set thick roan from the Ormondale herd. This bull has a lot of real meat under his good handling hide but he needs a stronger head to carry him into hot company. It was his thickness that made him senior champion over the winner of the aged class. Glide was second with a stylish but upstanding sort over the good handling red shown by Miller that suffered for lack of a better spring of rib.

There were just enough senior yearlings to take the five ribbons. The pick of the lot was easily the outstanding white Pacheco Lad 215th that was grand champion at Sacramento and came most awful near repeating. He is a bull that is hard to overlook in any company because of his great quality and smoothness. If his hooks laid in a wee bit neater he would present little to criticize. Miller was in second place with one lacking width behind, and Caledonia Farms took the next place with a youngster of splendid type but a little plain at the tail. Glide was fourth over a white of most unusual scale.

The next class introduced to the public Collynie Prince Lavender, the bull that was personally selected and imported last fall by Easton & Ward from the noted Duthie herd in Scotland, the herd that is recognized as the fountain head, so to speak, of Shorthorn excellence. This beautiful white yearling won his class hands down. He is a beautifully fronted bull, extremely good at the shoulder and in the crops, deep in chest, strong of stop, nice in the flank, and, aside from a little plainness at the rump,

Even If You Could "Coast" EVERYWHERE
In the Old "Bus"
It Would Cost You More Than
Pacific Electric Fares

The Gas you burn is only a small item in your total cost of operation. Add to that the cost of oil, rubber, repairs and depreciation in the value of the machine, and see "where you are getting off."

The Government says it is costing you from 9c to 14c per mile.

You can ride the Pacific Electric way for 3c per mile for the occasional journey and for about 1½c per mile for the frequent (commutation) trips.

"CAN YOU BEAT IT?"
YOU CAN NOT!

Ask any Pacific Electric Agent for the Commutation Fare on tickets best adapted to your travel needs. He will show you the true way to travel economy, and you do not carry the accident risk.

which seems to be improving, is a most promising youngster. He has ample scale, quite thick, but because of heavy service does not show as smooth as could be asked. Straloch Farm was second with a blocky, good handling calf. Dibblee was third and fourth and a red calf from the Blackhawk Ranch brought up the rear.

The six senior calves were headed by the flashy son of Caledonia that won his class at the state fair. He is a great prospect, in every way a credit to his illustrious sire, and while some did not realize it at the time the junior champions were showing, he received serious consideration. Miller had a good white calf in second and another Caledonia calf was third. Glide was fourth and Dibblee fifth.

The juniors were topped by a beautifully turned calf from the Caledonia herd. He had to be a good one to beat the Straloch entry that stood next. The other four calves were in too swift company.

When the aged cows with calves were called in only one appeared, and those at the ringside who had expected to again see Little Sweetheart were disappointed. Mr. Glide did not enter her at this show as he felt that she had accomplished enough and showed his sportsmanship by passing up a sure chance for another victory to give Shorthorn matrons a chance to wear the purple.

The dry cows, five in number, had an easy top in the great Glenbessie 3d, full of character, very thick and very smooth. A full sister to the famous Little Sweetheart was shown into second place by Ormondale and a very deep and thick matron from the Glide herd third. Bond was fourth and fifth.

The senior and grand champion female appeared at the head of the two year olds, a very desirable white from the Pacheco herd. This "leading lady" is very sweet, nice in her lines and satisfactorily upholds the beef making argument for the Shorthorn breed. Glide was second with a heifer full of quality over a thicker fleshed roan from the herd that furnished the winner.

There were nine senior yearlings and, aside from the top few, were not overly pleasing. Pacheco won with a white of good type and more scale over a very compact and sweet red heifer from the Caledonia herd. Dibblee was third and Ormondale had an attractive roan daughter of Imp. Gartley Landsdowne in fourth. Glide stood fifth.

Eleven junior yearlings paraded before the judge and were led by one of the most satisfactory little ladies seen in many a day, the beautiful roan Mary Ann Rush, junior champion at Portland last year and holder of the same honor at San Francisco this year. She is owned by the university, and about the only fair criticism of her is that she might be a little bigger. Caledonia was second with a cracking good roan. Pacheco was next with a thick roan and Easton & Ward were fourth with a good white. Dibblee was fifth with a roan that would have stood higher had she a stronger top.

The largest class of the show was made up of the 14 senior heifers, and 14 good ones they were too. Straloch won with a heifer of great depth and thickness, evenness and balance, that had more size than those just below her. Miller was second with a white that has improved a lot since the earlier shows but that looked a bit out of place above the thicker, smoother red shown by Caledonia. The latter heifer is a rare type. Pacheco was fourth with a well covered roan. Dibblee was fifth and Miller sixth with a roan heifer that might have stood higher.

The ten juniors again conceded first honors to the remarkable white baby shown by Caledonia Farms.

One of the outstanding features of the Shorthorn exhibit was the splendid showing California breeders made in the group classes, especially in the younger things. Pacheco took the aged herd and the breeders young herd and Caledonia took the calf herd, the get of sire and the produce of dam.

Exhibitors: Wm. Bond, Newark; Caledonia Farms, West Sacramento;

(Continued on Page 487.)

THE SAN FRANCISCO BULLETIN

$1000 PUZZLE PICTURE

Extra Copies of The Puzzle Picture Sent Free on Request.

HOW MANY OBJECTS IN THIS PUZZLE START WITH THE LETTER "S"

The above picture contains a number of visible objects beginning with the letter "S." Take a good look at the picture. See, there are all sorts of objects beginning with the letter "S," like saw, spoon, sack, etc. Nothing is hidden and you don't have to turn the picture upside down or sidewise. Start making a list of all visible objects in the picture, the names of which begin with the letter "S."

Fifteen cash prizes will be awarded for the fifteen best lists of words submitted. The answer having the largest and nearest correct list of visible objects shown in the picture which begin with the letter "S" will be awarded first prize; second best, second prize, etc.

Write down those "S-Words" you have in mind right now. Now is the time to start.

Everybody Join In

The San Francisco Bulletin announces today a most interesting and amusing puzzle—a puzzle that is different. It is a great big fun game in which all can participate, from the youngsters to grandpa and grandma. It really is not a puzzle at all for all the objects have been made perfectly plain with no attempt to disguise or hide them. None are so small but that the poorest eyesight can see them. It is a test of your skill, your ability to find the visible objects beginning with the letter "S" in the picture to determine the prize you win. Gather all the members of your family together this evening, give each one of them a pencil and a sheet of paper, study the picture carefully and see who can find the most "S-Words."

Open To All—Costs Nothing to Try

The Bulletin invites you Mr. and Mrs. Reader and family to join in this puzzle game. We know you will find it the best game ever, full of fun and excitement, educational and interesting to all. Now, that is saying a lot, but wait until you have tried it. We venture to say you will agree with us that you never have had so much fun. It doesn't look hard, and it isn't hard. It is an interesting picture just bubbling over with fun for all.

THE PRIZES

The Premier Prizes

Winning answers will receive prizes as follows:

	Prizes given if no subscriptions are sent.	Prizes given if ONE subscription is sent.	Prizes given if TWO subscriptions are sent.
1st Prize	$35.00	$350.00	$1,000.00
2nd Prize	35.00	350.00	1,000.00
3rd Prize	35.00	350.00	1,000.00
4th Prize	25.00	250.00	500.00
5th Prize	20.00	150.00	300.00
6th Prize	15.00	75.00	150.00
7th Prize	7.50	40.00	80.00
8th Prize	5.00	30.00	60.00
9th Prize	3.00	20.00	40.00
10th Prize	2.00	15.00	30.00
11th Prize	2.00	15.00	30.00
12th Prize	2.00	15.00	30.00
13th Prize	2.00	15.00	30.00
14th Prize	2.00	15.00	30.00
15th Prize	2.00	15.00	30.00

OBSERVE THESE RULES

1. Any man, woman or child, who is not an employee of the San Francisco Bulletin, or a member of an employee's family, may submit an answer. It costs nothing to try.
2. All answers must be mailed by November 19th, 1921, and sent to Robt. Brantone, Puzzle Manager, San Francisco Bulletin.
3. All lists of names should be written on one side of the paper only and numbered consecutively. Write your full name and address on each page in the upper right hand corner. Do not write subscribers' names or anything else on same paper with list of words. Use a separate sheet.
4. Only such words as appear in the English dictionary will be counted. Do not use obsolete words. Where the plural is used, the singular cannot be counted, and vice versa.
5. Words of the same spelling can be used only once, even though used to designate different objects. An object can be named only once. However, any part of the objects may also be named.
6. Do not use hyphenated or compound words, nor words formed by the combination of two or more complete English words, where each word in itself is an object.
7. Answers having the largest and nearest correct list of names of visible objects shown in the picture that begin with the letter "S" will be awarded First Prize, second, Second Prize, etc. Neatness, style or hand-writing have no bearing upon deciding the winners.
8. Candidates may co-operate in answering the puzzle, but only one prize will be awarded to any one household; nor will prizes be awarded to more than one of any group outside of the family where two or more have been working together.
9. In the event of a tie for any prize offered, the full amount of such prize will be awarded to each tied participant.
10. New subscriptions only by mail or carrier will be accepted. A new subscription is anyone who has not been receiving the San Francisco Bulletin by mail or carrier since November 3rd.
11. All new subscriptions will be carefully verified by The Bulletin Puzzle Manager. Candidates sending in old subscriptions as new will positively forfeit the credit on such subscriptions as qualifying for the bonus rewards.
12. All answers will receive the same consideration, regardless of whether or not a subscription for The San Francisco Bulletin is sent in.
13. Three well known Californians, having no connection with the San Francisco Bulletin, will act as judges and decide the winners, and all participants agree to accept the decision of the judges as final and conclusive.
14. The judges will meet on November 29th, and announcements of the prize winners and correct list of words will be published in the San Francisco Bulletin just as quickly thereafter as it is possible.

NOTE—In remitting, use checks, money orders or bank drafts, payable to order of THE SAN FRANCISCO BULLETIN, NOT TO INDIVIDUALS.

You Can Win $1000.00

This "S-Word" picture puzzle game is a campaign to increase the popularity of The San Francisco Bulletin. It costs nothing to take part. It is not a subscription contest, and you do not have to send in a single subscription to win a prize.

If your list of "S-Words" is awarded first prize by the judges you will win $35.00; but if you would like to win more than $35.00, we are making the following special offer during this publicity and booster campaign, whereby you can win bigger cash prizes by sending in ONE or TWO new six months' subscriptions (maximum two) to The San Francisco Bulletin.

HERE'S HOW: If your answer to the "S-Word" picture puzzle is awarded first prize by the three independent judges, and you have sent in ONE new six-months' subscription to The San Francisco Bulletin (new, not renewal), you will receive $350.00 instead of $35.00. (See Rule 10.) Or, if your answer is awarded first prize by the judges, and you have sent in TWO new six-months' subscriptions, or ONE new full year's subscription to The San Francisco Bulletin, you will receive $1000.00 in place of $35.00.

How is that for a liberal offer? But, look, there are three of these large prizes which we will call "The Three Premier Prizes," Therefore, if your answer is awarded First, Second or Third Prize, and you have sent in TWO new six-months' subscriptions, or ONE new yearly subscription, you will win $1000.00, and then, too, we will give extra amounts on all other prizes in the same manner. If your answer is qualified by two subscriptions and you win fourth prize, you will win $500.00, and so on down. (See third column in the prize list above.)

TRUTH IN THE NEWS is The San Francisco Bulletin's slogan. It is the only Pacific Coast newspaper which utilizes all of the three great news services—the Public Ledger Service, The Associated Press, and United Press.

Ex-President William H. Taft, Col. E. M. House and Rene Viviani, ex-premier of France, are among the fifty-two contributors to The Bulletin exclusively in this territory through the Public Ledger Service alone.

The best in newspapers. The greatest service west of Chicago.

That's what folks are saying about the

Westco

The Tankless Water System

(Automatic)

It gives you fresh water, *direct* from well, *not* tank water.

And takes the least attention—it's so simply built. Pump has *only one moving part.* No belts, valves, gears, or springs. The whole system is made practically trouble-proof.

Then, too, there is no storage tank to leak, freeze and otherwise misbehave. Users appreciate the freedom from tank troubles which the WESTCO means.

Costs less than one cent for the WESTCO to pump a hundred gallons of water. Runs by means of regular electric light current or batteries of individual lighting plant.

Report of State Dairy Cow Competition, September, 1921

By Prof. F. W. Woll

List of cows producing 50 pounds of butter fat or over during the month:

Adohr Stock Farms, grade Guernseys: C-115, 1,128 lbs. milk, 51.89 lbs. fat.

Arden Certified Dairy, grade Holsteins: 89, 1,038 lbs. milk, 55.01 lbs. fat; 249, 1,200, 50.40.

Anita M. Baldwin, Holsteins: Lady Lilith Walker DeKol, 2,051 lbs. milk, 67.88 lbs. fat; Thelma Riverside Walker, 1,512, 50.95.

Dean Beeman, Holsteins: Jacobina, 1,856 lbs. milk, 59.02 lbs. fat; Capunista, 1,516, 51.08; Bernice NaDean DeKol, 1,410, 50.63.

Eugene Biondini, grade Jerseys: Midget, 1,242 lbs. milk, 70.79 lbs. fat; Rachel, 1,272, 69.96; 62, 1,041, 59.34; Shortie's Best, 849, 57.73; Brownie, 1,056, 53.86; Twinnie, 954, 53.42; Hannah, 873, 53.25; Judy, 996, 50.80.

N. L. Browning, Holsteins: Segis DeKol Bess, 1,706 lbs. milk, 58.01 lbs. fat.

Leo Christen, grades: Mama Jersey, 1,011 lbs. milk, 59.65 lbs. fat; Newberg, 1,464, 55.63; Black Beauty, 1,131, 53.16; Mousie, 918, 52.33.

W. F. Early, grades: Butterfly, 1,038 lbs. milk, 52.94 lbs. fat; Pencil, 1,014, 50.70; Roany, 1,230, 50.43.

J. A. Genzoli, grades: Dollie, 1,086 lbs. milk, 64.07 lbs. fat; Jill, 837, 59.43; Blue Spot, 1,215, 58.32; Fannie, 888, 55.94; Pansy, 891, 51.68.

Earl Graham, Holsteins and grades: Princess Maide Veeman, 2,131 lbs. milk, 73.53 lbs. fat; Niger, 1,569, 65.89; Pinkie, 1,500, 60.00; Gamma Sarcastic of L., 1,635, 61.84; Hauser, 1,530, 56.61; May Walker G. Korndyke, 1,291, 50.47; Pansy, 1170, 50.31.

H. G. Gross, Jerseys: Lydia's Valentine, 748 lbs. milk, 53.30 lbs. fat.

J. B. Harbers, grade Jerseys: Daisy, 894 lbs. milk, 57.22 lbs. fat; Nellie, 894, 53.64; Polly, 996, 51.79.

Nate Hauck, grades: Brindle, 1,338 lbs. milk, 76.27 lbs. fat; Chub, 1,386, 67.91; Red, 1,281, 67.89; Lily, 1,116, 65.84; Speck, 1,308, 58.86; Nigger, 1,317, 56.63; Bird, 1,047, 55.49; Bally, 1,602, 54.47; Slow, 930, 52.08; Ring, 1,005, 51.25; Brownie, 927, 50.06.

C. D. Hayworth, Jerseys: Lorna of Rico, 1,031 lbs. milk, 50.19 lbs. fat.

A. B. Humphrey, Guernseys: Calla Grove Itchen, M., 1,017 lbs. milk, 62.25 lbs. fat.

Peter Iversen, grades: Old Jersey, 918 lbs. milk, 60.59 lbs. fat; Kicker, 1,260, 57.96; Poor, 918, 53.24; Holstein Heifer, 1,077, 52.77; Yellow Jersey, 798, 51.07; Marcella, 879, 50.98; Baby, 774, 50.31.

Los Angeles County Farm, Holsteins: Whittier Pontiac N. Iv., 1,663 lbs. milk, 58.21 lbs. fat.

Palo Alto Stock Farm, Holsteins: Kiatta Pontiac Pride, 2,756 lbs. milk, 79.64 lbs. fat; Thelma Hartog S. DeKol, 1,958, 68.52; Irene Segis Pontiac, 1,741, 65.80; Alta Pappoose, 1,787, 60.77.

F. F. Pellissier, Holsteins and grades: Princess Tolia Walker, 1,539 lbs. milk, 60.02 lbs. fat; 2479, 1,902, 58.96; 2403, 1,395, 57.20; 2640, 1,617, 56.60; 1772, 1,551, 52.73; Mamie Pontiac, 1,164, 50.05.

M. L. Pontoni, grade Jerseys: Paddy, 1,002 lbs. milk; 58.12 lbs. fat; Rolly, 1,140, 57.00; Klamath, 999, 54.95; Beauty, 924, 52.67; Mabel, 1,074, 51.55.

H. F. Richards, Jerseys: Victor's Lady Queen II, 988 lbs. milk, 58.08 lbs. fat; Teddy R.'s Silver Beauty, 1,044, 55.72; Teddy R.'s Poppy Girl II, 806, 50.60.

Olga Saxer, Holsteins: Moorland Colantha Rose, 1,740 lbs. milk, 57.24 lbs. fat.

W. Terkelsen, grade Jerseys: Laura, 927 lbs. milk, 50.06 lbs. fat.

Gambonini, Petaluma; 33, Earl Graham, Compton; 34, H. G. Gross Eureka; 35-38, L. A. County Farm, Hondo; 41-44, F. F. Pellissier, Whittier; 45, University of California, Davis; 46-47, H. L. Wakeham, Santa Ana; 48, R. H. Walrath, El Centro.

The reports for September so far received show that 376 cows in milk during the full month produced an average of 868 pounds milk and 40.07 pounds butter fat (average number of days in milk at the beginnig of the month, 193). The highest producing cow for the month was a pure bred Holstein Kiatta Pontiac Pride, owned by Palo Alto Stock Farm (2,756 pounds milk, 79.64 pounds butter fat, at 123 days from freshening). Four cows produced between 70 and 80 pounds butter fat during the month and 15 between 60 and 70 pounds.

The prize offered by the California Cultivator, Los Angeles, for the highest average production by the five grades for the month of September was won for the second time by N. Hauck of Alton. The average production of the five highest grades eligible to compete for this prize was 59.16 pounds butter fat during the month (average milk 1,216 pounds test, 4.86 per cent; average distance from freshening 126 days). The production of the individual cows ranged from 52.1 to 67.9 pounds butter fat. These cows stood first among similar groups of five grades in 21 dairy herds in different parts of the state that competed for the Cultivator prize the past month. The average production of butter fat for nine of the groups came about 50 pounds, the lowest producing grades averaging 27.60 pounds. Five grades owned by the following dairy farmers produced an average of over 50 pounds fat during the month, viz., N. Hauck, 59.13 lbs.; Earl Graham, 56.23 lbs.; P. Iversen, 55.13 lbs.; M. Pontoni, 54.86 lbs.; Leo Christen, 53.73 lbs.; University Dairy, 52.53 lbs.; J. A. Harbers, 51.27 lbs.; J. A. Genzoli, 51.08 lbs.; and W. D. Early, 50.01 lbs.

The following cows completed the record period of ten months (305 days) in the competition during the past month. They are given in the order of their owners, alphabetically arranged, except for the record cow for the month, which is placed first:

Livestock News Notes

LIVESTOCK SALE CALENDAR

Holsteins

November 3, A. W. Morris & Sons, Inc., Woodland.
November 9, Palo Alto Stock Farm, Palo Alto.

Herefords

November 1, J. H. Cazier and Sons, Sacramento.

According to the Ayrshire Digest of October 15, two California Ayrshires headed their respective classes for the month of July. The two cows are the senior four year old, California Barcheskie, owned by the University of California, and the senior two year old, Elkhorn Kirsty, owned by the Elkhorn Farm, Watsonville. The former headed her class with 81.74 pounds fat and the latter had 70.47 pounds.

E. A. Gammon of Hood has sold his Hope Farm and entire hard of registered Holsteins to Max Manlock of San Francisco. The Holstein herd consisted of 25 head that were the tops in the Kiesel sale last spring.

One of the largest deals in grade Holsteins reported in several months was the sale of 140 head of cows from the G. B. Borcher herd, Sacramento, to Archer and Scarlett. The buyers are developing a large dairy plant in the West Sacramento district. It is reported that the 140 head sold for an average of $130.

The annual meeting of the California Cattlemen's Association will be held at San Francisco, December 10. Secretary Hagen reports that the membership in the association is increasing rapidly and that now since the association is for the first time rendering some definite and practical assistance to the cattlemen he has hopes of increasing the membership to 4,000 during the coming year.

The dispersal sale of the W. J. Bemmerly Herefords last week proved a disappointment. About 150 head were offered but owing to the small crowd, not more than half of the offering was disposed of for an average of $180.

A senior Berkshire boar pig bred by the Italian Vineyard Co., Guasti, was second in class at the recent National Swine Show held at Peoria, Illinois.

Imp. Corston Masher, senior champion Shorthorn bull at the recent state fair, owned by the Warm Creek Land and Livestock Co., Wells, Nevada, repeated his winning at the Utah state fair.

W. S. Guilford, Butte City Ranch, Butte City, says that farmers of Northern California are manifesting more interest in all kinds of registered livestock than at any time he can recall.

Thirty-five Holstein females sold in the annual sale of the Stanislaus County Holstein Breeders' Association at Modesto last week for an average of $297. Only two bulls were offered. No bids were received for one and the other was bid in by the consignor, H. E. Cornwell, for $5,000.

The threatened railroad strike is holding up shipment of two fine young Holstein bulls from the Maxwell Farms, Hollywood, to the East. One calf by Tritomia Pietertje Ormsby, the champion of this year's National Dairy show, and out of Joy Ormsby Skylark, a daughter of the great Sir Ormsby Skylark, with a junior two-year-old rec-

Produce of dam (2)—1, Caledonia; 2, Pacheco; 3, Dibblee; 4, Pacheco; 5, Dibblee.

Aberdeen-Angus

Notwithstanding the fact that a number of good Angus herds have been established in this state during the last few years, the doddies have not staged strong shows this year. F. F. Peabody of Santa Barbara was the sole exhibitor and was represented by the imported aged bull Proud Eric of Aberlour and the two year old heifer Bashful Idol of French Broad.

Fat Steers

As yet our California shows have not developed as strong steer classes as might be expected in view of the growth of the breeding classes but considerable interest is always manifested and it is certain that in time this feature of our shows will grow. Certainly no state in the Union is in greater need of the stimulating influence of these classes from an educational standpoint.

McNerney and Son of Oregon showed a two year old Hereford. The University of California won the class for yearlings with a cross bred Hereford-Angus that is a full brother to the sensational heifer they showed two years ago. He was a comparatively easy top over a field of five. This steer, with ample size and well covered throughout and fitted to perfection by that master fitter, Alex McDonald, not only won his class but went through to the championship.

Straloch Farm won the class for steers under a year with a thick and sappy roan that was later made reserve champion.

The Holsteins

The Holsteins developed into a first class show after it appeared earlier in the season that the Black and Whites would not be creditably represented. California is a great Holstein state and our breeders have accomplished much and can usually be depended upon to hold up their end of any show, but this has in a way been an off year for a number of the leading exhibitors, and throughout the season the Holstein classes at the different shows, except the Southern California shows, have not been so strong numerically as they have on quality.

Hugh G. Van Pelt of Waterloo, Iowa, rated the classes.

One of the interesting contests of the show started just as soon as the aged bulls stepped into the ring. There were only two, but they represented the two best aged bulls that have come together for some time. Bridgford, showing his several times grand champion, King Segis Alcartra Prilly, met for the first time the great bull, King Segis Pontiac Jannek, owned by the Santa Monica Dairy and shown so successfully at the southern fairs. Both bulls had friends backing them and all realized that it would be a real battle for the honors, and when the smoke cleared the Bridgford bull was wearing the blue but he knew he had been to a "bull show." The winner went through to the final championship.

No two year olds appeared and but two senior yearlings came forward. The Maxwell entry led the Bridgford bull. Morris took the next class.

The senior bull calves made a strong showing and the winner was shown by Maxwell Farms. The junior calves appeared not to be placed according to popular demand.

The aged cows put up an excellent show that was marked by the reappearance of the popular Betsy Lamb Prilly, now carrying the Morris colors. This grand cow was generally accorded first rating over the Maxwell entry. Azavedo turned the tables on Holmes when his entry was placed above Ida Lotta Winnifred Burke. The two cows had met at Sacramento and the latter was the state fair grand champion.

Maxwell Farms won the next two classes over stiff competition. Bridgford had the winning senior yearling heifer and the university showed the junior yearling winner. Maxwell took the next class and Hartsook won the baby class.

Exhibitors: Bridgford Holstein Company, Patterson; Maxwell Farms, Los Angeles; A. W. Morris & Sons, Inc., Woodland; Fred Hartsook, Lankershim; M. Azavedo & Sons, Patterson; R. L. Holmes, Modesto; San Juan Mission Herd, San Juan; University of California; E. Swift Train, San Francisco; Santa Monica Dairy, Santa Monica.

The awards follow:

Aged bull—1, King Segis Alcartra Prilly, Bridgford; 2, King Segis Pontiac Jannek, Santa Monica.

Senior yearling bull—1, Sir Ormsby Hengerveld Skylark, Maxwell; 2, King Tora Pontiac Prilly, Azavedo.

Junior yearling bull—Aaggie Tuebie Mead, Morris.

Senior bull calf—1, Sir Pontiac Segis Prilly, Bridgford; 2, Tritomia Pietertje Ormsby Fayne, Maxwell; 3, Sir Aaggie Johanna Alcartra, Morris; 4, King Aaggie Prilly Alcartra, Bridgford; 5, King Inka Hengerveld Prilly, Bridgford.

Junior bull calf—1, Lady Panzie Tritomia Ormsby, Maxwell; 2, San Juan Ignaro Burke, San Juan; 3, King Pontiac Saltertia Prilly, Bridgford; 4, Unnamed, Holmes.

Aged cow—1, Betsy Lamb Prilly, Morris; 2, Joy Hengerveld Clothilde, Maxwell; 3, Yama Princess Alcartra Lass, Azavedo; 4, Ida Lotta Winnifred Burke, Holmes; 5, Anoakia Korndyke, Bridgford.

Three year olds—1, Stanislaus Belle Hengerveld, Maxwell; 2, Fobes Ormsby Skylark, Maxwell; 3, Steno Alta Pietertje Posch, San Juan.

Two year olds—1, Queen Ormsby Netherland Parthenia, Maxwell; 2, Flush Ormsby Skylark, Maxwell; 3, Luzette Abbekerk Prilly, Bridgford; 4, Miss Colantha Korndyke Contenta, Morris; 5, Johanna de Kol of Plant View, Holmes.

Senior yearling—1, Katie Hengerveld Prilly, Bridgford; 2, Lily McKinley Ormsby Skylark, Maxwell; 3, Maid Pontiac Prilly, Bridgford; 4, Wadnak Ormsby Skylark, Maxwell; 5, Miss Aaggie Cream Cup Mead, Morris.

Junior yearling—1, Colantha Juliana Agnes, California; 2, Miss Abbekerk Prilly, Bridgford; 3, Stanislaus Leda Ormsby Jewell, San Juan; 4, Betty Segis Netherland, Azavedo.

Senior heifer calf—1, Panzie Skylark Tritomia Ormsby, Maxwell; 2, Lilly Waldorf Pietertje Pontiac, Bridgford; 3, Tora Pontiac Prilly, Bridgford; 4, Segis Beets Tritomia Ormsby, Maxwell; 5, Aaggie Bloom Mead de Kol, California.

Junior heifer calf—1, Caroline Wayne Fayne, Hartsook; 2, Adeline Pontiac Segis Prilly, Bridgford; 3, Flush Ormsby Tritomia, Maxwell; 4, Jennie Korndyke Walker 2d, Bridgford; 5, San Juan Marie Ilyaide, San Juan.

Senior champion bull, King Segis Alcartra Prilly.

Junior champion bull, Sir Pontiac Segis Prilly; reserve, Sir Ormsby Hengerveld Skylark.

Senior champion cow, Betsy Lamb Prilly; reserve, Queen Ormsby Parthenia.

Junior champion heifer, Panzie Skylark Tritomia Ormsby; reserve, Caroline Wayne Fayne.

Grand champion bull, King Segis Alcartra Prilly; reserve, Sir Pontiac Segis Prilly.

Grand champion cow, Betsy Lamb Prilly; reserve, Panzie Skylark Tritomia Ormsby.

Aged herd—Bridgford.

Breeders' young herd—1, Bridgford; 2, Maxwell.

Calf herd—1, Bridgford; 2, Maxwell.

Get of sire (4)—1, Maxwell; 2, Bridgford; 3, Maxwell; 4, Bridgford.

Produce of dam—1, Maxwell; 2, Bridgford.

Five cows in milk—Maxwell.

The Jerseys

The Jersey show was made possible through the exhibit of J. E. Thorp of Lockeford who had the only full herd. Thorp won all the classes except the junior yearling bull, senior bull calf and junior yearling heifer. M. Fortini of Orland showed the senior bull calf and the university showed the two junior yearlings. The university had the junior champion bull that was also reserve grand champion and Thorp had the other champions. Hugh G. Van Pelt made the awards.

The Guernseys

But two herds of Guernseys were on hand, those of A. B. Humphrey of Escalon and Brant Rancho, Owensmouth. Both herds have been fighting it out all season with varying results. At this show it was the Brant herd that found most favor with the judge. Brant had the senior and grand champion bull on the aged May King of Fern Ridge. Humphrey's senior bull calf, Escalon Princess Whiteface, was junior champion. Brant's aged cow, Princess of

Thoroughbred Milk Strain

SHORTHORN DURHAMS

AT BARGAIN PRICES

My herd, headed by Foothills Pioneer, Grand Champion at Sacramento, 1919, must be sold on account of the illness of manager of my ranch.

I refused $6,000 for this wonderful animal two years ago. Among the herd of fifty head are many champions. Will sell young bulls for $150 each that I refused $500 for last year.

It costs no more to keep a good animal than a poor one. Nothing better to be found anywhere.

Let me know what you want and will make bargain price.

Nevada Hereford Ranch

J. H. Cazier & Sons
Wells, Nevada

A government accredited herd. No reactor in 16 years. A herd whose record in the show and sale ring is only surpassed by the esteem accorded its productions by cattlemen. We can furnish bulls or females to fill any need—and at sound prices. Visit our herd or write for information.

After the Molt—

EGGS!

In the National Egg Laying Contest, hens given a daily tonic made the highest records in quick molt and heavy egg yield—giving official proof that a tonic pays.

Dr. LeGear's Poultry Prescription is a powerful tonic that helps hens pick up after the molt, strengthens and fortifies their systems against disease, and puts them in shape for early winter laying.

Get it from your dealer today under Dr. LeGear's guarantee "satisfaction or money back." Give it to your hens as directed. Increase your profits by keeping your hens laying at top speed.

Brooder Houses for Large Flocks

By Jean A. Koethen

INTENSIVE poultry keeping calls for the rearing of chicks in large flocks. Just how large they must be is a question that has not been fully answered. There are those who prefer to start their chicks in brooders which hold but 100 at the most and who are firm in the belief that chicks and pullets do better if they are kept always in flocks of this size or smaller. Others would increase the size of the flocks to 200 or thereabouts, and others again are satisfied that 500 is the largest number that can be advantageously reared aand housed together. On the other hand there are not a few who claim to be able to brood 1000 or even 2000 chicks together around one of the big brooder stoves and are not afraid to keep as many pullets in one flock.

Small Flock Brooder House

The chicks in this house on the McAllister Ranch at Inglewood are brooded in units of 100 each. Each inside run is connected with its own outside run, so that the units are kept entirely separate.

The fair minded poultryman admits frankly that there is no one best way of doing anything. He also admits that the personality of the caretaker is an overwhelming factor in determining method. Experience counts tremendously but disposition to take pains is still more important. I visited a woman last spring who brooded 2000 chicks in a flock with very slight loss, but she slept on a cot in the play room for a week or more so that she might watch the stove all night. Not every poultry keeper is willing to take so much trouble for a few chicks.

Brooder House Types

Two types of brooder houses are in use for large flocks. One is the long house divided crosswise into three foot runs all facing south, so that the sunshine may be equally distributed, and each run connecting at its inner end with a brooder heated by hot water or hot air and designed for 100 chicks. Such a house, 20 feet long and 10 or 12 feet wide, divided into six runs, will accommodate from 500 to 600 chicks at first. If it is filled at the beginning, however, some of the chicks will need to be moved by the end of the third week. Poultrymen who wish to raise their chicks by the thousand usually build with extra runs which are filled as the chicks outgrow their first quarters.

The other type of house may be of almost any size, though 12 by 20 is a good average. It may have shed or gable roof, but, like the first house, should be mostly glass on the south. It is divided into two rooms, brooder room and play room and the play room connects with an outside run so that the chicks after the first four days have their choice of three temperatures. Heat is supplied by one of the many types of oil or coal or gas brooder stoves or by an electric hover which can be used in any house.

Two Purpose Houses

High prices of lumber have driven not a few poultrymen to the use of a simpler and cheaper house than either of the above. This is a colony laying house about 8 by 12, a light frame of 1 by 3, covered with tarred paper. On a good many ranches these little houses are being built instead of the more expensive long houses. They will house from 50 to 75 layers and in the hatching season are easily heated for use as brooder houses. One I saw recently was so arranged that the space under the droppings board could be turned into a brooder and warmed by pipes connecting with a stove outside. An electric hover could easily be used in such a house and with less danger of fire than the use of a brooder stove inside would involve. A house of this sort can be built for about $15 and will house at least 200 baby chicks the first two weeks or longer. By the end of the third week the number should be reduced half in order to give each chick a chance for growth and development.

The outside run is an important adjunct to every brooder house. When the house is divided into runs so that the chicks may be kept in units of 100 or less there should be an outside run corresponding to each inside run. When the chicks are in one large unit a double yard system is frequently used. The yards are as large as possible, one in front and the other at the rear, or, if more convenient, both in front. While the chicks run in one a crop of barley is grown in the other. A third yard, planted to alfalfa, on which the chicks can be turned for a short time each day, is a valuable addition to the regular runs.

There is no standard size for chick runs, but this rule may be safely laid down: the more room the chicks have to run in the more rapidly will they grow and the fewer runts will there be among them.

Quite as important as artificial heat at night and room to run by day is sunshine for the growing chick. All brooder houses should face either south or east. As a rule south is best

Mr. Poultryman 10% MORE EGGS LESS FEED LOWER COST

MORE EGGS

PCA DRY MASH should be kept before the hens at all times. Numerous letters show that poultrymen can increase their egg yield 10 per cent by feeding one-half ounce dampened PCA moult mash per hen each day. Many feeders of PCA made more money with their hens during the months of July and August than any month last spring.

LESS FEED

Users of PCA advise that after making accurate tests they find PCA Dry Mash will produce more eggs on less feed. One customer saved over 800 lbs. mash in less than three months, feeding 300 hens on PCA products.

LOWER COST

Less feed consumed with high egg production means lower cost per dozen eggs. Some poultrymen concede that PCA Products are of the best quality, but they have been told that the price is too high. The fact is, PCA mashes have declined with the feed markets.

They are still made of pure grains, carefully ground and blended with other materials, into a perfectly balanced ration.

Poultrymen who know grain values will tell you that despite its excellent quality PCA prices are no higher than those asked for any good mash.

Every dealer is authorized to refund your money if PCA feeds do not please you. Send today for name of your nearest dealer and our poultry literature.

because in January and February the sun will shine into the runs from 9 till 4. In order to get the early morning sun, however, there must be some glass on the east, and some poultrymen think it best to face their houses east and do without the afternoon sun. My own idea would be to have the south side all glass and in addition one east window near the floor so that the chicks may get the first rays of the sun in the morning. No amount of artificial heat can take the place of sunshine in growing chicks, and the wise poultryman will study his situation and employ every possible device for keeping his chicks in the sun in winter. It means cheaper brooding, greater vigor, less disease.

Single Unit Brooder House
Twelve hundred chicks are brooded about one stove in this house on the Bandini Ranch, Riverside.

Poultry Queries

Conducted by Jean A. Koethen

Tapeworms

My hens are affected with very small worms which stretched out may be about one-eighth inch long, but when they draw up are almost round. I have tried tobacco and other remedies without results.—Subscriber, Inglewood.

From your description it would seem that these small worms are tapeworm segments instead of round worms, which are considerably longer. If your birds have tapeworms tobacco will do them no good. Oil of turpentine, pumpkin seed, areca nut and male fern are the standard remedies, of which pumpkin seed is easiest to use. Chop the seeds to a size that the birds like, say about like cracked corn, set them before the hens and let them eat what they will. Then follow two hours after the seeds have been eaten with Epsom salts, one-half teaspoon for each bird, dissolved in water and mixed in a little moist mash. This treatment can be repeated several times a few days apart. If the pumpkin seed gives no results, try oil of turpentine mixed with an equal quantity of olive oil and 20 to 30 drops of mixture given at a dose. Follow in two hours with two or three teaspoons of castor oil. Powdered areca nut is one of the best remedies for tapeworm in fowls but should not be given to geese or turkeys. It may be given in doses of 30 to 45 grains mixed with butter and made into pills. Male fern may be used in the form of powder (dose 30 grains) or of liquid extract (dose 15 to 30 drops). Whatever remedy is used, the dose should be given when the birds are fasting and followed with a dose of Epsom salts or castor oil. Individual treatment is quite troublesome and should not be attempted till the simpler pumpkin seed treatment has been tried. It is understood, of course, that there will be immediate reinfestation unless the birds are moved to fresh grounds or the soil on which they are running disinfected with quicklime or a ten per cent solution of sulphuric acid.

White Minorca Legs

In your issue of October 8 you state that slate colored legs are a sign of pure bred White Minorcas. If you are right I never have seen White Minorcas, and I have been breeding them for several years. All the White Minorcas I have seen have white to pinkish legs, almost white or quite white, and white bills, and are much larger than White Leghorns. The only slate colored legs I have seen occur when a White Minorca male is crossed with White Leghorn hens; then many slate colored legs occur and some black feathers. If I am wrong I want to be corrected. I think much of the White Minorcas; they lay the largest eggs of any breed I know, larger even than the Black Minorca.—C. E. Hoover, Friendswood, Texas.

You are right, and I am glad to be corrected. The American Standard says, "Shanks and Toes: Pinkish White."

Lice on Chickens

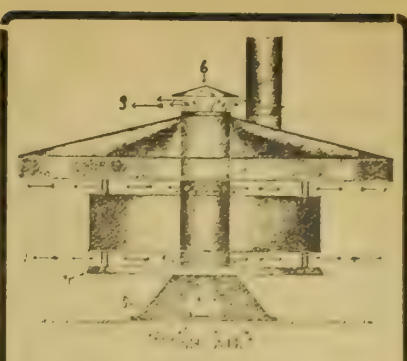
What is the cause, preventive and cure for lice on chickens?—Subscriber, Escondido.

Filth is the cause of lice on poultry as well as on human beings. If the bodies of chickens could be kept clean there would be nothing for lice to live on and therefore no lice. The only preventive is also the cure, some treatment which will kill the lice and nits. A dust bath of soft, moist dirt is all some hens need to keep them comparatively clean. Others, especially the heavier breeds, require dusting with louse powder from time to time. Sodium fluoride has been recommended for this purpose by the government, and quite generally used. There are also numerous prepared powders. Greasing with lard is a very effective remedy but is not advisable in cold weather and always makes the hens look bad. Blue ointment, a mercury preparation, mixed with an equal amount of vaseline and used on the skin about the vent is preferred by some experiment stations to powder.

Roupy Turkeys

Two of my turkeys have swellings under both eyes. Eyes are clear. Odorless, thin discharge from the nostril. Eat well and apparently in good health. Is it contagious and can it be cured?—Subscriber, San Joaquin.

Your turkeys have a slight attack of swellhead, a form of roup which is not contagious but may run through a flock if all the birds are kept under the same conditions. In other cases it seems to be congenital and attacks only the weaker birds. You may need to open the swellings, but first try the permanganate treatment. Dissolve a few crystals of permanganate of potash in about a quart of slightly warm water. Massage the nostril, rubbing toward the eyes to loosen any mucus that has collected, then dip the head in the permanganate solution and hold it there a few seconds. Do this twice a day, preparing a fresh solution each time, for it loses its strength quickly. Another solution that may be used in the same way is 1¼ ounces boric acid and ½ ounce borate of soda to a quart of water. If the swelling under the eyes persists after a few days of this treatment, open it with a sharp, clean knife, remove the secretion and cleanse thoroughly with boric acid solution.



If You Are Going to Brood

anywhere from 200 to 1500 BABY CHICKS and would like to have a SYSTEM that will furnish all the WARM FRESH AIR required, no matter what the climatic conditions may be, write us for our

HAY AND FEED

Francisco:

Choice Dairy Alfalfa	16.00
Standard	15.00

A. W. Scott Co. says:

Receipts past week, 691 tons. The possibility of a change in freight rates is likely to hold off and delay shipping for a time. It is reported that a general average of about 16 per cent reduction is likely to be made. Arrivals of alfalfa have been light and the market quiet. Practically everything has been cleaned up out of the fields in the vicinity of San Francisco, and holders of alfalfa in warehouses have been asking higher prices to cover expense of storage.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the markets in San Francisco (for prices to consumers, charges of switching, cartage, commission and handling expenses must be added, according to conditions).

Wheat Hay No. 1	16.00@18.00

Citrus Markets

Los Angeles, Nov. 2, 1921.

The shipping year closed October 31. There are still a few Valencias to go and it will be two weeks before new crop Navels start from Central California. Definite prices are not yet made but shippers are hoping the first car will command around 4.00@4.50 f. o. b. Butte County announces that it will make the effort to get cars out the first of next week. Arizona Navels are already moving and made one sale on a basis of $6.50 per box f. o. b. Arizona's first shipment last year was $8.00. Florida is already shipping at the rate of nearly 50 cars daily. Florida prices are ranging in auctions from 2.70@4.50. Much of the fruit is showing a decidedly green color.

Shipments

Record of complete shipments for the year are not yet available. Will be given next week.

November 1

New York: 25 or., 6 lem. Val. 1.95@8.60, lem. 1.80@5.90.

Pittsburg: 2 Val. 3.25@4.90.

CALIFORNIA CATTLEMEN'S ASSOCIATION REPORT

San Francisco, October 24.—Additional sales have been reported at prices equal to those quoted last week. Sales within a quarter of a cent freight rate are for 6½c f. o. b. ranch for immediate delivery. Sales in the northern part of the state continue for 5½c f. o. b. ranch.

The Weekly Market Report quotes only highest prices being paid for prime cattle. You will be informed of the lowest prices by the buyer who visits you. The Weekly Market Report quotes sales as reported by members of the association and will inform you of the highest prices being paid for prime cattle f. o. b. ranch, regardless of the prices quoted in newspapers f. o. b. packing company yards. Prices quoted in this report are actual sales and not our idea of what the price should be.

Considerable money is being secured by cattlemen through the War Finance Corporation. The application forms for securing loans have been considerably simplified and further changes are being planned in order to make funds available as easily as possible.

The Annual Meeting of the California Cattlemen's Association will be held in San Francisco on December 10, 1921, at 10 a. m., in the Palace Hotel.

The price paid for prime steers f. o. b. ranch in California continues to be higher in proportion than at eastern points. A few cattle are being imported into California, while it remains impossible to ship California cattle to eastern markets with profit.

Sell only f. o. b. ranch. Do not ship on consignment. Sell first and second quality steers separately. This means money to you. Your good cattle do not sell the poor ones.—R. M. Hagen, Secretary.

WEATHER REPORT

San Francisco, Cal., Oct. 29, 1921.

FINANCING RICE GROWERS

The banks of the Sacramento Valley have decided to set aside a fund of $1,400,000 to market the rice crop. The War Finance Corporation also has been requested to aid in the undertaking with a loan of $1,250,000.

The success of the reorganization of the rice growers can now be considered complete, according to Market Director Maddox.

State Market Director Maddox is now in the southern bean growing districts preaching the gospel of cooperation to the producers of that section with gratifying results.

CALIFORNIA'S GREATEST LIVESTOCK EFFORT

(Continued from page 487)

Meadowbrook, was liked well enough by the judge, despite her age, to again be made senior and grand champion. The junior calf from the Humphrey herd, Escalon Naomi, was junior champion.

Aged bull—1, May King of Fern Ridge, Brant; 2, Nobleman of Maple Hill, Humphrey.

Two year olds—1, Itchen Daisy's King of Revada, Brant.

Junior yearling—1, Escalon Rex, Humphrey; 2, May Day of the Rancho, Brant.

Senior bull calf—1, Escalon Princess Whiteface, Humphrey; 2, Royal of the Rancho, Brant.

Junior bull calf—1, Golden Glow of the Rancho, Brant; 2, Escalon Itchen Prince, Humphrey; 3, Escalon Searchlight, Humphrey.

Aged cow—1, Princess of Meadowbrook, Brant; 2, Sylvia of Frankland, Brant; 3, Golden Glen Pansy, Brant; 4, Golden Anna's Fairy, Humphrey.

Three year olds—1, Little Queen of the Rancho, Brant; 2, Lucky Girl of the Rancho, Brant; 3, Nevada Lily Belle, Humphrey.

Two year olds—1, Rosemary of the Rancho, Brant; 2, Escalon Lassie, Humphrey.

Senior yearling heifer—1, Jeannie of the Rancho, Brant; 2, Pearl Souffle of Revada, Humphrey.

Junior yearling heifer—1, Felois Tungsten Priscilla, Brant; 2, Ansilla of the Rancho, Brant; 3, Escalon Queen, Humphrey; 4, Escalon Golden Anna, Humphrey.

Senior heifer calf—1, Escalon Pearl, Humphrey; 2, Fascination of the Rancho, Brant; 3, Escalon Marigold, Humphrey; 4, Elsie III of the Rancho, Brant.

Junior heifer calf—1, Escalon Naomi, Humphrey; 2, Gypsy Girl of the Rancho, Brant; 3, Fonix of the Rancho, Humphrey; 4, Escalon Phyllis, Humphrey.

Senior champion bull—May King of Fern Ridge; reserve, Itchen Daisy's King of Revada.

Junior champion bull—Escalon Princess Whiteface; reserve, Golden Glow of the Rancho.

Senior champion cow — Princess of Meadowbrook; reserve, Little Queen of the Rancho.

Junior champion female — Escalon Naomi; reserve, Felois Tungsten Priscilla.

Grand champion bull—May King of Fern Ridge; reserve, Escalon Princess Whiteface.

Grand champion female—Princess of Meadowbrook; reserve, Escalon Naomi.

Aged herd—1, Brant Rancho; 2, Humphrey.

Young herd—1, Humphrey; 2, Brant Rancho.

Calf herd—1, Humphrey; 2, Brant Rancho.

Produce of dam (2)—1, Brant Rancho; 2, Brant Rancho.

Get of sire (4)—1, Humphrey; 2, Brant Rancho; 3, Brant Rancho.

Five cows in milk—Brant Rancho.

The Ayrshires

The Ayrshire show was very light. E. B. MacFarland had out his full herd which, with the exception of a few from the Woodside herd, constituted the entire exhibit. MacFarland won all firsts and championships.

The Milking Shorthorns

J. D. Rowe & Sons, Davis, and Thos. Harrison of Santa Rosa staged the milking Shorthorn show, and as on former occasions when these two herds have met a good show ensued. Honors were practically the same as at Sacramento. Rowe had the grand champion female in the unbeatable Bellevue Daisy, and Harrison added another championship to Count Tickford's string.

The Horse Show

In many respects the showing of horses at San Francisco can be rated as one of the best exhibits seen in California in many a day. It is no doubt true that on former occasions various shows have had more entries in the draft classes, but it has been a long time since any show registered more quality throughout and fewer common things.

In point of numbers the Percherons led this division and the show had the virtue of bringing before the public many new animals not seen heretofore. The feature of the show was the splendid lot of mares and fillies shown by Miller and Lux. This firm came forward for the first time with a highly creditable display that for general type, quality and soundness could hold its own in any western show. Their good imported black mare, Lila, was champion. The champion stallion was the aged black shown by Thos. Harrison of Santa Rosa. He is a rather toppy old boy with a gay way of moving but hardly looked of championship caliber beside the good gray shown by the university.

The Shire exhibit was staged altogether by entries from the Blackhawk stable, and that fact is sufficient weight to attest to the character of the show. It is doubtful if any firm in America can produce more good Shires than are owned by Messrs. Easton and Ward. Their aged stud, Blackhawk Senator, was champion, and their wonderful black mare, Blackhawk Chessie, was the winning mare. This firm also had several hitches entered in the night horse shows and wherever entered won their classes.

Ratto Stock Farm, Napa, upheld the Belgian banner with a nice lot of mares and stallions. They had no competition and therefore won all the championships.

The Dibblee Estate, Santa Barbara, was on hand with a nice lot of Clydesdales that were without competition.

Each evening of the show there was staged a brilliant horse show under the management of Walter Palmer. The classes were invariably well filled and the manner in which they were run off was a delight to horse show fans.

The Sheep Show

Except in a few classes competition was not keen in the sheep division, but Professor R. F. Miller of the university who judged the various breeds declared that on the whole the show would rank high as to quality.

Bullard Brothers, Woodland, made a clean sweep in the Rambouillet classes. The Corriedale Sheep Company of Hollister did likewise with Corriedales. F. C. Needham was the only exhibitor of Dorsets. Some very excellent Leicesters were shown by Walter Sporle, Jr., of Canada. Bishop Brothers, San Ramon, were the heavy winners in the Shropshire classes. J. S. Hubbard and Sons, Monroe, Oregon, and Wm. Reddell and Sons of Monmouth, Oregon, had the principal Lincoln exhibits. Hubbard and Sons divided honors with the Corriedale Sheep Company in the Southdown classes. Perhaps the strongest competition developed in the Hampshire classes. In that division Hubbard and Sons fought it out with Straloch Farm, Davis, and Calla Grove Farm, Manteca. Hubbard had the two champions and Straloch won with a pen of lambs. S. C. Starr, Bellfountain, Oregon, Oxfords and Reddell had the only Cotswolds.

The University of California put on a splendid exhibit of fat sheep and as it had no competition it won all awards.

HEREFORDS WERE BARGAINS IN ASSOCIATION SALE

Ten members of the Pacific Coast Hereford Cattle Breeders Association consigned 28 head of bulls and females to the seventh sale held under the direction of that association during the California National Livestock Show at San Francisco. On the whole the offering was very attractive but did not meet with as ready appreciation at the hands of the buying public as had been expected. The average price of $270 hardly represents a true measure of value for the offering. There is no question but that the fact that the various breeders refrained from buying in order that new men would have an open field affected the final results. However, the consignors were generally well pleased with the fact that practically the entire lot went to men new to the business.

Henry Thiessen of Sweetwater, Idaho, had the satisfaction of selling the top female and the top bull. R. C. Jacks of Monterey was the buyer of the top female, paying $675 for the extremely well bred two year old heifer, Miss Rupert 7th. P. W. Snyder of Los Molinos secured a real value when he got the good young bull, Ruperts Model 14th, for $1,000.

To enumerate all the good buys would necessitate detail mention of the sale list. Mr. Jacks made another pickup when Chas. Rule's aged bull, Roehampton 34th, first in class at the show, fell to his bid of $425. Cazier and Sons sacrificed a good young heifer for $350.

Among the heaviest buyers were Owen Duffy, representing the Napa State Farm and C. B. Orvis of Stockton.

The sale was managed by the California Breeders Sales & Pedigree Company. Col. H. L. Hull was the auctioneer and John A. Bunting and Col. Davis worked the ringside.

Following is list of sales:

H. M. Barngrover, Taylorville
1, Lord Patricia 2d, bull, Oct., 1919; Tooby & Prior, Blacksburg, $225.
3, Byrdie Woodford, Nov., 1919; Napa State Farm, Yountville, $225.
4, Dixie Queen, Feb., 1916; C. B. Orvis, Stockton, $235.
5, Maida Rosemont, Jan., 1920; A. E. Perley, Hollister, $1.00.

A. H. Barnum, Moro, Oregon.
6, Donald Carlos 2d, bull, Apr., 1919; W. A. Frederick, Sunol, $375.
7, Princess Valley 15th, Apr., 1920; Cowell Portland Cement Co., $185.
8, Princess Carlos, Apr., 1920; Wm. Briggs & Son, Dixon, $195.

Wm. Briggs & Son, Dixon
9, Bourbon Columbus 30th, bull, Feb., 1920; A. E. Perley, $210.

John A. Bunting, Mission San Jose
10, Miss C 39th, Feb., 1920; C. B. Orvis, $185.
11, Miss C 38th, Feb., 1920; C. B. Orvis, $125.
12, Miss C 32d, Nov., 1919; Napa State Farm, $275.
13, Mission Lass, Sept., 1919; Cowell Portland Cement Co., $210.

J. H. Cazier & Sons Co., Wells, Nevada
14, Miss Defiance 7th, Oct., 1920; Napa State Farm, $350.

James B. McNerney & Son, Carlton, Ore.
15, Blanchard Donald, bull, Sept., 1920; Cowell Portland Cement Co., $325.
17, Jean Blanchard, Jan., 1920; Howard Tilton, Madrone, $200.
18, Lady Blanchard 25th, Jan., 1920; J. H. Cazier & Sons Co., Wells, Nev., $210.

Chas. Rule, Duncan Mills
19, Roehampton, 34th, bull, Feb., 1917; R. C. Jacks, $425.

H. Thiessen, Sweetwater, Idaho
20, Ruperts Model 14th, bull, Sept., 1919; P. W. Snyder, Los Molinos, $1,000.
21, Miss Rupert 7th, Mar., 1919; R. C. Jacks, $675.
22, Bonnie Belle, Feb., 1920; T. A. Work, Monterey, $185.
23, Perfect Queen, Sept., 1919; C. B. Orvis, $235.
24, Vanity Belle, Jan., 1917; R. C. Jacks, $300.

University of California
25, Bright Fairfax, Apr., 1920; Napa State Farm, $180.

W. J. Bemmerly, Woodland
26, Baby Clark, Dec., 1919; C. B. Orvis, $125.
27, Nellie Barton, Sept., 1919; Howard Tilton, $175.
28, Arlette, Apr., 1917; T. A. Work, $135.
29, Sally Clark, Feb., 1917; C. B. Orvis, $180.
30, Melba Cook, Jan., 1918; T. A. Work, $225.

LIVE OAK PIG CLUB WINNERS

Saturday afternoon, October 15, was an eventful time for the members of the Live Oak Duroc-Jersey pig club as it marked the end of the pig feeding contest. The judging of the pigs, scoring of the records, and announcing of the winners took place at the J. L. Ames place south of Live Oak, and it was an intensely interested group of contestants and parents that were present. The pigs were judged by Frank Spurrier of the University of California, and the scoring of the records was the work of a committee composed of Mr. Spurrier and Wm. Hudson. The awards were made on the basis of the following points: Value of the pig as a breeding animal, 40 per cent; economy of feeding, 40 per cent; neatness of record, 10 per cent; story of the contest, 10 per cent.

Cash prizes were offered by J. L. Ames and Witherow & Stafford to the four contestants making the best showing. The contestants winning prizes were Horace Vantress, first, $12; J. L. Ames, Jr., second, $8; Charles Vantress, third, $3.50; Grace Eloise Ames, fourth, $3.50. These four members were also the recipients of a trip to the University farm at Davis.

All members of the club will enter a sow and litter contest which will probably begin in November or December. At that time an opportunity will be given for any other boy or girl who may wish to join the club to get a bred gilt and begin with the sow and litter contest. It is anticipated that there will result from this contest a fine lot of pigs that will be shown in the pig club section at the state fair next year.

After feeding these Duroc pigs for four months every boy and girl in the club believes that they are fortunate in the selection of this breed, and all are satisfied that there is much to be gained by taking part in this contest.

DOES IT PAY TO RAISE RUNTS?

A questionnaire conducted among 1,000 leading farmers and breeders by the United States department of agriculture indicates that about 7 per cent of the annual production of farm livestock in the United States consists of runts and undersized specimens of the various breeds and classes. Farmers report that their annual incomes from livestock would be increased an average of 13 per cent if runts could be eliminated. Better methods of feeding and breeding better stock, the use of purebred registered sires, good care and systematic attention, better housing and sanitation, proper care of the dam before the birth of young, practical control of such objectionable parasites as worms and lice, the control of disease, and the culling from the farm of all stunted stock which indicates no possibilities of successful reformation and rehabilitation are the control methods recommended by these experienced farmers. About three-quarters of them say that it does not pay to raise runts, while the balance maintain that the Tom Thumbs of the livestock world can be raised successfully only when well bred and when plenty of cheap feed is available and dependable markets are readily accessible.

Every Hen Advertises

THE hen that is fed on SURELAY advertises her appreciation by giving you a uniform, profitable egg-production. She is happy on her job—and she makes good! Just so, the hen that does not give you a uniform, profitable egg-production advertises her need for a balanced feed like SURELAY.

That's the whole story—there's no secret about it. Neither is there any secret about SURELAY—or what it will do. It is a clean, prime quality-feed that has stood the test of time—that has won the favor of countless hens and the faith of thousands of poultrymen.

SURELAY contains the exact ingredients your hens need to bring about the greatest egg-production in the most natural way. And these ingredients are balanced and blended more skillfully than can possibly be done by hand. There is nothing in SURELAY to throw your hens "off their feed." Our daily laboratory tests insure absolute cleanliness and uniformity day-in-and-day-out!

If you want to see why SURELAY has won a host of friends who advertise its profit-producing power—if you want to see how this uniform quality-feed "makes your hens pay by making them lay"—send for our booklet, "Makes Hens Happy."

Your copy is waiting for you —all you need do is to fill in the coupon and mail today!

Advantages of Conservation of Moisture in the Soil

HILGARD'S "Soils," published some 16 years ago, referred to the power of dry soils to absorb beneficial gases, particularly referring to carbonic acid gas and its value in the soil. But he called attention to the fact the absorptive power was largely with the near-surface soils. Other books on soils and fertilizers a half a dozen to a dozen years later stated that "recent investigations seem to indicate that carbon dioxide is probably taken into the plant through the roots and that forms of carbon other than carbon dioxide may be found useful to some extent in supplying plants with their carbon food." In all cases investigators have found that the power of absorption is greatly increased by thorough and deep culture. We believe deep culture is generally secured by the orchardist in order that moisture may be more perfectly conserved. But if in addition to holding of soil moisture we encourage absorption of gases and better bacterial action then all the more there is profit in deep tillage.

One who has been most careful in his observation of the work of experimenters and specialists writes:

"That carbon plays an important part in the building of growing plant structures has been known for a long time. In fact, if water is taken from most forms of plant life, almost half the remainder (49 per cent) consists of carbon.

"In the breathing process human beings take oxygen from the air and exhale carbon dioxide. Plants, on the other hand, require the carbon dioxide in air and release the oxygen from their breathing organs in leaves, bark, roots, etc. The various bacteria native to soils and the chemical changes constantly present release a quantity of this gas, carbon dioxide, and if the surface crust is kept broken so that the gas may escape from the soil continually as generated, the plant structure is benefited accordingly.

"One of the experimenters, Riedel by name, found no exception to the rule that carbon fertilization increases the size and weight of fruits and roots. The smallest gain of any was 15 per cent. In all other experiments the gain was above 36—and sometimes as high as 100 and even 200 per cent. He declares that carbon fertilization produces greater results than other fertilizers, such as nitrogen, when each is used without the other, and finds that fields fertilized with both nitrogen and carbon dioxide increase their yields on an average of 82 per cent.

"The natural supply of this gas is in the air and is carried into the soil by falling rain, etc. In some of the experiments he obtained additional gas from factory chimneys, etc. He maintains that fertilization with nitrates is generally overdone and that part of its cost is useless without sufficient carbon to assist it and in nearly all cases finds that carbon is lacking in proper amount. He declares that limited carbon fertilization can be attained, if soil is well supplied with organic matter, by keeping the surface looser than is at present the rule. We have been taught in our agricultural schools that this process aired the land and assisted oxidation processes and so benefited growth, but it appears that much of the benefit, though little realized, was due to assisting carbon released from the soil to rise freely to the leaves above. One experimenter shows that the amount of carbon dioxide released by well cultivated soil is three times as great as from a crusted soil.

"From these interesting experiments it would appear crop increases from proper treatment of soil to assist carbon fertilization can be gained by every practical farmer by proper cultivation."

To summarize some of the great needs for orchard soils:

Store more water.

Once stored, keep it.

Break up plow sole and open the way for the lower reservoirs to supply even surface growing roots. In other words, employ tools or implements which will let nature do her best.

In all soils, (Continued on Page 503)

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

If among the more than 40,000 Cultivator's weekly circulation any fail to find any article they desire to purchase advertised in the Cultivator's columns, a special request is extended you to let your wants be known to the California Cultivator and we will place you in touch with proper parties.

EDITORIALETTES

Just a word as to the value of subsoiling given on this week's cover. This is the period of the year when the subsoiler should be worked. Soils which take in only a limited quantity may have their water holding capacity greatly increased by stirring and loosening up the subsoil. California farmers as a rule have the tools and they have their farms equipped with power to move them. The day of the light draft tool has passed for California farms.

* * *

Almost every mail brings information from the War Finance Corporation of thousands, sometimes millions, being advanced to a financial institution in Iowa or another in Nebraska or South Dakota or Minnesota or Wyoming, to be used for agricultural loans or often on livestock. The largest loan referred to in the report which comes in the last mail is of a million to a financial institution in New Orleans to finance the export of wheat and cotton. Some are disappointed because the activities of the corporation have not resulted in more complete return to normal conditions, but it is to be presumed that it will take many months, possibly years of time, and much patience and forbearance before we see a return of our former "good times." Some have insisted that they could not begin to return until the loans made by this government to foreign countries are cancelled either by payment or by voluntary action on the part of the U. S. A. If we wait for full payment it will be a long time coming.

Near East Relief is with us. It seems years since we began to learn of the terrible suffering of the people of those countries under the heel of the Turk. It has been years, and the appeal has been regular and persistent. This same appeal will doubtless continue until civilization takes a hand and prevents the slaughter. A special drive is now on. Meantime the people are starving and there is an especial appeal for relief to be secured during the coming Holiday season.

It's time for a bit of shrinkage in our tax rate. This is tax paying end of the year and we are reminded that "taxes are high." This seems a very familiar quotation. We began using it very many years ago before the world knew what high taxes were. Since then there has been regularity in the annual increase. The Pacific Coast is not to be outdone in this particular, and of all the cities in the United States Los Angeles ranks fourth in its per capita tax. In fact, that city is the highest of all the cities of the world in its tax for schools, which aggregates $10.88 per capita. Its total tax for every man, woman and child is $26.62. It is exceeded only by Boston, Pittsburg and New York in this latter total. One trouble with this tax business is that we of the Pacific Coast are growing so fast and we are bound to maintain, or rather exceed, conditions in older settled communities, and it appeals to us at bond election times that nothing is too good for California, so we vote, and perhaps too often get what we vote for, higher taxes.

BEETS ON 50-50 BASIS

Ventura County sugar beet growers are demanding a more just division of the returns from beet sugar. Stung by the injustice of former methods of division the growers have united and appointed a committee to make investigation and determine as to what will be a fair demand for them to make on the factory people. At a special meeting held recently at Oxnard under the general direction of the Ventura County farm bureau the committee reported. The first step of the committee's work was the formulation of a questionnaire which was sent to 50 growers, business farmers, who knew their own methods and the costs thereof and could furnish proof as to those costs. From the responses to this questionnaire it was learned that the total average cost per acre from fall plowing to payment of taxes was $57.53 per acre. The average tonnage per acre was 9.02. The average per cent of sugar was 18.4. Total average receipts were $58.26. This left a net profit per acre for the period of 12 months of 73 cents.

On the other hand it was determined that the gross factory receipt per acre, less the amount paid the rancher, was $91.11.

The report of this committee with extended discussion of the growers present resulted in:

"We, the committee, recommend the following prices for beets for future contracts: The growers to pay for seed, grow harvest and deliver beets at dumps. Factory to manufacture and sell sugar on the market. Growers to receive in payment for same a 50-50 division of the average whosesale selling price of sugar for the year on San Francisco basis.

"Also, the grower to receive a just share of beet pulp after factory has been allowed enough to cover all expenses such as drying, sacking, marketing and interest on investment on pulp equipment."

The growers are not attempting to make unfair comparison in referring to their own net profit and at the same time to the gross amount received by the factory people. Presumably the producers have no very definite information as to the net return the sugar factory receives on each acre the farmer grows but, beside paying his own expense and even providing a sinking fund, the manufacturer is receiving more net returns from each acre of sugar beets grown than does the owner and grower. A fifty-fifty basis of division looks eminently fair.

As to capitalization of sugar factory and that required by farms which grow the beets for the factory, it has been definitely proved that the investment of the producer is proportionately vastly greater than that of the manufacturer.

In this connection we believe there have also been some exceptionally interesting figures as to the amount invested in overland railways and in California orchards.

FREIGHT RATES—FARM RATES

In the November issue of the National City Bank Review of Economic Conditions, the leading article has to do with the railroad situation. It calls attention to the terrible burden of the increased freight charges on all kinds of industry and at the same time refers to the plight of railroad finances and the efforts of managers to reduce operating expenses. The railway executives are now bound in many particulars, especially by the requirements of the railroad labor board. There have been slight reductions in railway men's wages, and even this slight reduction was almost sufficient to cause a strike by the employes.

The railways have likewise made slight, very slight, reductions in rates on a few farm products. In discussing the situation the National City Bank quotes from a letter written by an Illinois farmer to his implement manufacturer:

"I need a wagon and my dealer wants the price of 650 bushels of corn for the same wagon I could buy with 200 bushels of corn before the war. The harness man wants the price of a wagon load of hides for a No. 1 harness. I simply cannot see my way clear to buy wagon, harness or anything else that I can possibly manage to get along without."

The manufacturer replied:

"Our present price, F. O. B. factory, on a farm wagon, is 100 per cent higher than our price of 1914. At this price we are selling this wagon at approximately 20 per cent less than our cost. The cost to you, however, does not bear the same relation to the prewar price, for the reason that in 1914 the freight on a farm wagon from our factory to you was $1.37 a hundred; the present rate, including the war tax, is $2.32.

"A farm wagon weighs 1200 pounds. The difference in freight of 95 cents per hundred makes the transportation on this wagon alone cost $11.40 more than it did before the war. The increased transportation costs upon the materials that go into the wagon are even greater than this amount.

"When you come to pay for this wagon through the sale of corn in the Chicago market you have a still greater disadvantage, due to the fact that corn has declined since 1914. The freight on corn from your station to Chicago in 1914 was 24½ cents a hundred, or approximately 14 cents a bushel; today, with the 3 per cent war tax included, it is 47 cents a hundred, or approximately 26 cents per bushel, so that you pay 12 cents a bushel more to get your corn to Chicago than you did in 1914.

"You state that it requires 650 bushels of corn to buy a wagon today. At 12 cents a bushel increased freight this means that you are paying the railroads $78.00 more transportation on the corn necessary to buy this wagon, therefore your increased contribution to the railroad company in getting this wagon out there and shipping corn enough to Chicago to pay for it, is $89.40.

"You can well see from this that it is absolutely impossible for any of us to get back to a normal basis of prices until the cost of transportation is very materially reduced. You ask us when conditions will change; we tell you, when transportation costs are gotten back upon a reasonable basis. The great difficulty in getting this adjustment now is the expense the railroads are put to for labor, for example, here in this community, while the going rate of labor is 30 cents an hour, at the Rock Island shops 43 cents per hour is being paid for eight hours a day and time-and-a-half for overtime, with the proviso that if more than one hours' overtime is worked, even though it be ten minutes, five hours' additional compensation is charged. Locomotive engineers are getting from $3,500 to $5,000 a year. A good deal the same condition obtains in our coal mines.

"We all must work, through our congressmen and through a united public sentiment, to secure a readjustment of these railroad and mining costs before any of us can hope to resume business in a normal way. As far as we here are concerned, we have already made substantial reductions in our prices and expect to continue to do so in future as reduced costs of production permit. We are continually operating at a very substantial loss. The business world, outside of transportation and mining, has gone as far as it can until it gets relief through these channels."

As to return to the farmer: The department of agriculture has found that:

"Compared with a five year average before the war as 100, the purchasing power of some farm products at prices paid to farmers in June, 1921, were as follows: Corn 61, oats 60, barley 53, wheat 93, rye 101, buckwheat 101, flaxseed 55, beans 81, cotton 51, cottonseed 52, hay 68, cabbage 111, onions 73, potatoes 64, sweet potatoes 89, peanuts 48, apples 91, chickens 116, eggs 77, butter 83, milk cows 80, beef cattle 69, veal calves 73, sheep 66, lambs 79, wool 58, hogs 67, horses 45. Practically nothing that the farmer sells can be exchanged for the usual quantity of other things. It is physically impossible for farmers to absorb the products of factories. Farm prices have dropped much more than wholesale or retail prices of farm products."

The prices used in these comparisons were those of some four or five months ago. For instance, corn at that time, 60 cents a bushel, has dropped until it is now worth little more than 45 cents. Wheat has done the impossible and is today under the dollar mark, yet the railway laborer is demanding that his salary remain at the $3000 to $4000 level while the farmer is ruined.

On the other hand, as shown by the manufacturer in the letters above referred to: "At the beginning of the war farm products went up much faster than the products of labor, and for a time the farmer had the best of it. In the readjustment period after the war, which we are having now, the reverse is true." But we think we may safely add that the readjustment is vastly more extended than was the inflation period, and it is becoming a question as to how long the farmer can grit his teeth and hold on.

Vol. LVII, No. 20 Los Angeles, November 12, 1921 One Dollar Yearly

The Problem of the Old Orchard

By Charles C. Chapman Before State Fruit Growers

CITRUS trees planted in the fertile soil of California usually bear bountifully while young and vigorous, producing heavy crops, even though given but little cultural attention, but we find that as they grow older passing, say, 25 years of age, we must give them increasingly greater care and attention if we are to expect from them a profitable quantity of good fruit. In this characteristic they might be compared to a young team of horses or mules, which will display wonderful energy, doing a vast amount of work, whatever the attention given them, but as the years pass and they begin to age we find we must favor them, giving them more rest and better attention if we are to conserve their strength.

It requires no expert farming to grow good crops from young trees; ordinary cultural attention will usually bring satisfactory results. But when the foliage is less dense and the leaves are small and not so glossy; when the branches are numerous, the fruit small and the crops light; when, in other words, we see every evidence of age and gradual decline, then we must give them thoughtful attention, if we are to enable them in their old age and decrepitude to be profitable and not simply cumberers of the ground. We must then be like the scientist who recently grafted into the body of an old man a monkey gland in order to give him the "pep" of youth. What can we do to inject renewed vigor into our old trees? is a question worthy of our consideration. Many of our orchards are getting along to the time when we can call them old. This question has not bothered us heretofore, for most of our orchards were young and vigorous, but from now on, I predict, the problem of our old orchards will be a popular subject for discussion before gatherings of our citrus growers.

It has been reported that in Florida, where the citrus industry is older than it is here, they are now largely up against the problem of old orchards and recently have been making experiments with 50 year old trees in the way of heavy pruning and breaking up of hard subsoil with dynamite. They should soon know something definite in regard to results obtained from such treatment, and we perhaps can benefit from their experience. However, while there are a few fundamentals in the care and treatment of old orchards, local conditions have so much bearing upon this, as they do upon almost every other cultural problem, that it is difficult to suggest a definite treatment adapted to all localities and all conditions.

Let me pause to say, by way of admonition, that the best time to take care of an old orchard is in the days of its youth. Keep it continuously in good condition, not permitting it to get out of condition at any period or during any season of the year. The day of decrepitude will be longer deferred when this even and proper treatment prevails.

Age, however, will tell even though the best of care is given an orchard. Just how many years from the planting of an orange tree must pass before we are forced to call it of questionable age cannot be definitely stated. Varieties, and conditions that we may call local, and cultural treatment, will have much to do with the apparent age of a tree. In Spain and Italy we are told trees live to be 100 and even 200 years old and still are in bearing. I do not think, however, that we can with our more intensive farming expect any of our trees to continue profitable bearing so long even should they live to that age.

Perhaps the most satisfactory discussion of this question, especially the practical cultural phase of it, will be to briefly describe the methods we have followed in the treatment of our older orchards. These orchards had given every evidence of age and demanded more than ordinary attention in order to bring them back to normal production of good fruit. I am pleased to state that the methods followed have thus far proven satisfactory and I believe that in general they may be followed with a fair degree of confidence in almost any locality.

Nature in many ways helps the young orchard. Perhaps most important among these is a wealth of sunshine, which is so essential to the proper functioning of the leaves and also to aid in the process of nitrification that takes place in the soil; but in the older orchard we have the large trees growing closer together, preventing the sunshine from having effective influence either on the leaves or on the soil. It is therefore essential to put the older tree back, to some extent at least, into the condition prevailing in the earlier years of its life. This we have done by heavy pruning. In some of these older trees we have taken out large main branches at the top, opening up the tree to the sunshine, and also cut off large extending branches, permitting the sun to reach much of the soil heretofore shaded.

We have found that as our trees grow older and larger the overhanging branches prevent the cultivation of the ground beneath them. Thus a large portion of the ground allotted to a tree becomes hard and dry and furnishes it no nourishment. The tree, while growing larger and demanding a greater supply of plant food is permitted to encroach upon the soil and cut off or diminish its own food supply. We have found it quite as necessary to cultivate the soil under the tree, that is, around and about the trunk, as it is in the open spaces between the trees. For this purpose we have tried various types of cultivators, but none has proven entirely satisfactory. To do this cultivating under the large trees would appear to call for larger implements, but to the present time none has been presented to us which seems practical for the work.

We have therefore had to resort to hand work, digging up the soil, before and after the winter rains, with hand picks. We are in this way keeping most of the soil in fairly good condition so that the root system of the tree may have opportunity for development. We found that under most of our older trees the ground was hard and dry and that there were no feeders upon the main root system for from four to eight feet from the trunk of the tree. Breaking up this soil, fertilizing and irrigating it has developed in it a considerable feeder root system which undoubtedly is largely responsible for a rejuvenated appearance of the trees. To this, at least in conjunction with the heavy pruning, is to be largely credited the bringing back of the trees to their normal production of good fruit.

Possibly the greatest problem we have to contend with in the care of an old orchard is the eradication of the various scale and other pests. It seems almost impossible when an orchard of large trees is once heavily infested to get a uniform kill in all parts of the tree, due largely either to imperfect diffusion of gas or unevenness of the hatch. The shaded condition of the old orchard, however, is doubtless to some extent the cause of both the increase of these pests and of the difficulty of eradication. Fumigation is therefore an item that may add to a considerable extent to the debit side of the account with the tree and must be taken into consideration in deciding whether it is profitable or not.

Of late years considerable attention has been given to individual tree performance records. It stands to reason that such records become particularly valuable in the case of old orchards where trees begin to fall off in production due to old age, the evidence of which may appear in varying degrees and years apart in the different trees. There is an average amount of fruit which a tree must produce in order to pay for the necessary labor and material supplied to it and also give some return on the capital invested in it, and when a tree falls below this average it is time to make investigation as to the cause. Generally speaking something can be done to bring it back to profitable production, but if our best efforts fail the sooner the tree is taken out the better. And even after everything has been done to rejuvenate a tree, there comes a time when it is incapable of producing a profitable crop. When that time comes we should know it and be prepared to take out the old tree and fill its place with a young one. Procrastination will simply mean a greater loss and put farther and farther away the time when we can look for a profitable return from our orchard.

Many of our citrus growers have doubtless had greater experience in dealing with this problem than I have, and will, therefore, be able to make a more valuable contribution to the discussion of the question than I have made. Anyway, it is not good farming for us to permit our trees to deteriorate to the point of becoming unprofitable without a determined and studious fight. Our growers have successfully met all other problems that have come up from time to time,—and they have been many, and some perplexingly difficult, and I am certain they will meet this one and conquer. They will not permit our orchards to permaturely grow old. In California we drink at the fountain of perpetual youth. We therefore find our people in their prime at an age which in the East would be called old. I am confident, therefore, that we will discover some method of injecting into our orange trees an anti-age toxin that will keep them in the vigor and beauty of their youth until they pass at least the half century point.

* * *

Continuing discussion of citrus tree deterioration, A. D. Shamel of the department of agriculture considered orchard practices and rebuilding methods from practically every angle. From his address we have taken only that portion touching upon the improvement of orchard soils and resurfacing, together with summary, or conclusions.

* * *

By A. D. Shamel

Old citrus trees which have declined in production as a result of neglect of essential cultural treatments can usually be brought back to normal production. There are illustrations of this possibility in every important citrus district in California with which I am familiar. In fact, some of the most profitable investments in the citrus industry that have come to my attention have been where old and neglected orchards have been purchased and brought back to satisfactory production by good cultural and individual tree care. Experience has demonstrated in these instances that one of the first considerations is the improvement of the orchard soils.

One of the most important factors is the application of adequate amounts of organic materials during the proper season. Of these materials, stable manure, alfalfa hay and bean straw are most available and commonly used. These should be purchased and applied on the basis of their nitrogen and humus or organic content. In most instances sufficient materials should be used so that not less than 150 pounds of nitrogen be applied per acre. In a few cases under my observation of the care of old citrus orchards very much larger amounts have been used with profitable results.

The application of stable manure, alfalfa hay, bean straw or similar organic fertilizers during the late summer or the autumn months has usually given the best results. This treat-

Agricultural News Notes of the Pacific Coast

Northern California

Practically all rice is now harvested.

Onions are bringing $4 a hundred in car lots f. o. b. shipping points.

There is discussion of transferring Colusa County's fair from Arbuckle to Colusa.

R. L. Williams of Oroville has been named deputy county bee inspector of Butte County.

An agricultural club has been organized on the Capay Rancho in Tehama County.

The short course in poultry management has just closed at the Sebastopol high school.

Some of the rice growers of Colusa are planning to ship their paddy in bulk to tidewater.

Rice growers in Colusa County report that serious damage has been done by wild ducks.

The Earl Fruit Company has shipped nearly 1,200 carloads of grapes from Lodi this season.

There has been an exceptionally heavy production of rye grain in Siskiyou County this year.

A strawberry club was organized at Del Paso among boys of the Sacramento County farm bureau.

The Placer County Growers Canning Association is installing machinery in the Lincoln plant.

A cold storage plant has been installed at the creamery station on the state land colony at Durham.

The next regional conference of the Smith-Hughes agricultural instructors will be held at Colusa, December 2 and 3.

Lodi has wound up its grape shipping season. The calling off of the railroad strike boosted prices for the last carloads.

Roosevelt Day, October 27, was observed in the schools of the state in accordance with proclamation by Governor Stephens.

The state reclamation board has let contracts for concrete highway on the levee on the east bank of the Sacramento River at Hood.

Bean and rice growers of District 70 are rushing harvest operations in order to get their crops in before the first rains. Yields are heavy.

At the hog auction held by the Sutter County farm bureau last week on the Noyes ranch near Sutter City 211 hogs were sold at from $7.90 to $10.25.

Field Representative Schmidt of the Sutter Peach Growers reports signing up of 50 per cent of the tonnage in the Linden district of San Joaquin County.

Two hundred head of cattle owned by the state university have been brought down from mountain ranges to the stock farm near Shingle Springs in El Dorado County.

Banks of the Sacramento valley have set aside $1,400,000 to assist rice growers in marketing this years' crop. Probably another $1,250,000 will be made available by the war finance corporation.

Reports from the Sacramento-Yolo Cow Testing Association for September show Tromp Brothers of Clarksburg owners of the highest testing cow. They also hold the yearly record in the association.

Central California

The farm bureau of Poplar, Tulare County, will build a cold storage plant next spring.

Orange picking in Tulare County will start about the middle of November. A heavy crop of good quality is promised.

There was an attendance of nearly 2,000 at the annual picnic of the Fresno County farm bureau at Kearney Park.

Riverdale, Fresno County, celebrated Armistice Day with a procession, barbecue and other entertainment features.

Hog auction sales will be held in Kern County at Bakersfield, November 19; McFarland, 25; Wasco, December 3; Bakersfield, 17; McFarland, 23.

The organization committee of the Kern County irrigation district is going forward with plans to put water from the Kern River on 292,000 acres.

A number of grain farmers near Los Banos, Merced County, have been running day and night shifts to get their grain sown before the rains start.

Over 60 carloads of dried peaches, raisins, canned goods and grape juice during the week have been consigned to various points in the United States from Kingsburg.

At the recent meeting of the Central California Wool Growers Association at Stockton it was recommended that the annual meeting of the state association be held in Fresno.

A boys' pig feeding club is being organized in the Owens Valley of Inyo County. The pigs are furnished by the Owens Valley bank. The corn club contest closes today.

The Central California Wool Growers Association has decided to reduce wages of sheep herders to $40 a month and found. The San Joaquin Valley association has already adopted the same wage.

Farm home department meetings will be held in Kern County at Shafter, November 8; McFarland, 9; Arvin, 10; Weed Patch, 15; Inyo-Kern, 25; Kern Delta, 28; Wasco, December 1; Edison-Fairfax, 2.

At a recent meeting of the directors of the Valley Fruit Growers Association at Fresno it was decided to extend the scope of the association's activities to cover practically every branch of agriculture.

The Valley Fruit Growers Association has adopted a new wage scale for farm labor. Ranch labor will be paid $1.75 to $2.00 with board, $3.00 to $3.50 without. Wages for pruners and others will be announced about December 1.

The San Joaquin Valley Citrus Fair will be held at Visalia, December 10-17. Madera, Fresno, Kings, Kern and Tulare Counties are joining in preparations for the fair which will be opened by President Harding pressing a button in Washington.

Recently elected officers of the Central Wool Growers Association are: P. J. Connolly, president; S. Arbius, vice-president; W. Bristol, secretary; C. G. Owens, treasurer. Directors: E. Cady, J. S. Concannon, Jas. Gallagher, J. McGlinchey, E. H. Tyron, A. Denton, H. Arbius, P. Arbius.

Southern California

The quail season opened November 1.

Elsinore is holding a four day carnival and rodeo, November 10-13.

Foggy weather has delayed drying of walnuts in Ventura and Santa Barbara Counties.

A calf club has been organized among the boys and girls of the Santa Paula farm bureau.

The fall flower show of the Redlands Horticultural Society was held last Friday and Saturday.

Work has started on the new highway to be known as the Oxnard-San Juan Capistrano road.

The annual meeting and election of the Los Angeles County farm bureau will be held early in December.

Santa Barbara County farm bureau has established a marketing exchange. Admission fee to members is $25.

Covina, Los Angeles County, shipped 632 cars of Valencias through the California Fruit Growers Exchange.

The apple crop of the Yucaipa Valley is practically cleaned up. It appears that the output will be more than 800,000 boxes.

Howard Pressey will take up the management of the Rancho Sespe in Ventura County which was so long managed by W. H. Fleet.

More than a million dollars damage was done last week by fire to the Los Alamitos sugar factory in Orange County near Long Beach.

A special session of the League of the Southwest will be held in Riverside early in December to discuss power problems on the Colorado.

The Lima Bean Growers Association expects to receive funds from the War Finance Corporation to aid growers in marketing the present crop.

At the last meeting of the directors of the San Bernardino County farm bureau it was decided to organize a department of the Mojave to consider problems of desert centers.

Checks are being mailed by the California Lima Bean Growers Association, making final payment on the 1920 crop. This brings the total payment up to about $5.36 net to the growers.

Albert R. Gould, who writes the garden calendar for northern California in the Cultivator each month, addressed a meeting at the Ventura County fair on "Garden Cities and Landscape Gardening."

The Southern California Poultry Association show will be held at Santa Ana, Orange County, December 13-17. It is expected to house the show in the packing house of the Santa Ana Walnut Growers Association.

An Ojai, Ventura County, farmer spent a day at the county fair and returning found his entire grape crop had been picked and hauled away. Neighbors saw a truck with crew of 12 or 15 men at work but supposed their activities to be entirely legitimate.

The state highway commission is making surveys and getting work under way for the paving of the Banning to Indio road. The road will extend along the northern side of the Southern Pacific and save the detour against the southern hills, thus shortening the route by at least five miles.

The Coast and General

The Salt River Valley is shipping citrus fruits.

Seligman, Arizona, shipped out 50 carloads of feeder cattle, October 27.

The National Grange will hold its annual meeting at Portland, Oregon, November 16-26.

In the Yuma Valley of Arizona oranges are coloring up nicely but few have been shipped yet.

Heavy drying winds have taken the moisture out of range grasses in Northern Arizona and New Mexico.

The Maricopa County Poultry Association is holding its eighth annual show at Phoenix, Arizona, this week.

Farm bureau members in Umatilla County, Oregon, have marketed over 200 bushels of certified seed wheat.

The 1921 crop of watermelons broke all records according to the bureau of markets reports from the eastern states. It was more than double the crop of 1918.

The 1921 production of alfalfa seed in the United States is slightly larger than last year. The greatest increase in production is in Utah, South Dakota and Arizona.

The great Pacific International Show at Portland, Oregon, closes today. Last years' exhibits of livestock numbered 3,000. This year they ran well over 4,000.

The honey movement from the western mountain states was very heavy during September. More interest in extracted is reported than at any time since the spring of 1920.

Contract sales by potato growers of the Yakima Valley of Washington this year started at $15 to $20 per ton, increased rapidly to a peak of $34, and then eased off to a level of $25 to $28 per ton with but little activity.

North Dakota stepped into the front rank of potato shipping states the first week of October with shipments of 1,672 cars, compared with 175 cars for the corresponding week a year ago and 1,825 cars for the whole of last season.

The third week of November is "club week" at the Ohio state university at Columbus when 600 boys and girls, members of agricultural clubs who have won county championships, will gather for a season of conference and inspiration.

The 1921-22 currant crop of Greece has been estimated at approximately 275,000,000 pounds, as compared with 190,000,000 pounds last year, reports the American consul at Kalamata. The currant season in Greece begins on September 1.

The harvest of Jonathan apples in the Yakima and Wenatchee Valleys of Washington was at its height the first part of October, a week to 10 days in advance of the usual season. The early movement from the Wenatchee district was heavier than from the Yakima Valley.

The potato crop for the entire Yakima Valley, Washington, district will probably total 2,500 to 2,800 cars, principally Netted Gems, according to local estimates. The crop in general is showing excellent quality, although some wire-worm injury and second growth are reported.

Trees Near Line Trespassers

FEW questions have come to the office of the Cultivator oftener than those having to do with injury to one orchard by eucalyptus or other trees set on or at least near line on adjoining property. It is well known that roots of eucalyptus trees affect fertility and moisture content of the soil 40, 50 or even 100 feet from the trunk. As a rule courts have held that while the injured party may on his own land trench or otherwise restrict growth of trespassing roots there is no definite enactment which enables him to compel the trespasser to cease doing the injury, but where he can make definite proof of a certain amount of damage because of such trespassing roots or tops, he can collect damages. Such was the decision of the superior court of Los Angeles County in an action brought some months ago. The plaintiff appealed from the decision and it was carried up to the district court of appeal of the Second Appellate District of California. The appellant was represented by Attorney L. B. Stanton, who has answered legal questions in the columns of the California Cultivator for many years. From the copy of the decision of Judge Shaw, which was concurred in by Judges Conrey and James, a decision which was filed October 31, we are permitted to quote:

"Action for damages and injunctive relief against defendant, who, on her own land adjoining that of plaintiff, maintains a row of growing eucalyptus trees set one foot from the common boundary line. Judgment went for defendant, from which plaintiff appeals. It appears without controversy that plaintiff and defendant are owners of adjoining tracts of land, that of plaintiff lying immediately west of defendant's tract. Plaintiff has growing on his land a walnut orchard set out in 1914, the easterly row of trees being 20 feet distant from the boundary line common to the tracts of land; that set in place at about the same time and one foot east of said boundary line, defendant maintains a row of eucalyptus trees 300 feet in length, which, at the time of the planting had attained a height of upwards of 100 feet.

"This being the situation, plaintiff on March 9, 1920, filed his complaint alleging, among other things, that the roots of the eucalyptus trees had at the time extended into and through the northerly 350 feet of the eastern portion of his land a distance of upwards of 50 feet, by reason of which fact the east row of walnut trees were dwarfed and stunted and the soil for a distance of 50 feet from such boundary line had been deprived of moisture and plant food necessary and required in their growth and production of walnuts, all to his damage in the sum of $590.80; that by reason of the rapid growth and far reaching extent of the root system of said trees unless checked, he will be continuously and further damaged and that row of trees next east distant 60 feet from said boundary line will, due to the increasing root growth, be likewise affected and the strip of land 60 feet in width adjoining said row of eucalyptus trees rendered valueless in the growing of walnuts or of crops of any kind. Prayer for damages sustained by reason of injury due to the facts alleged in the complaint and for an injunction requiring defendant to abate the nuisance by checking the growth of the roots of said trees upon and into plaintiff's land."

The defendant denied many of the allegations and referred to the fact that she had materially reduced the tops of the trees wherever they had projected over the lands of the plaintiff and granted that the plaintiff had the right to reduce the root growth on his own land. Many authorities of lower courts were quoted but the decision concludes:

"It does appear without contradiction that the roots of the eucalyptus trees do intrude into plaintiff's land to a distance of some 50 feet; that in many cases the roots surrounded the trees in the first row next to defendant's land whereon the eucalyptus trees were growing and that by reason of the extent of such root system and the voracious feeding qualities of eucalyptus trees they had in their growth absorbed from plaintiff's land the moisture and food value which but for their presence would have supported the growth and production of the walnut trees and that where they were stunted and dwarfed bore little or no fruit. Respondent attracts our attention to no testimony whatever which supports the findings. Her sole concontention is that since plaintiff can abate the nuisance by cutting off the roots that is his sole remedy, by reason of which fact she argues that even conceding the findings are not supported by the evidence, nevertheless, under section 4½ of Article VI of the constitution, it is the duty of this court to affirm the judgment. The contention is without merit.

"As to the judgment in the justice's court pleaded in bar, it appears from the record that it was an action for damages alleged to have been sustained by reason of defendant's acts prior to the filing of the complaint therein on December 20, 1918, in growing said row of eucalyptus trees. Conceding that such judgment might bar recovery for damages prior to such time, it could not affect plaintiff's right to recover for damages sustained subsequent to said date. In no event could it bar his equitable rights to an injunction to prevent a continuance of the injury. Moreover, it appears that the action was dismissed by plaintiff. Nor is there any finding as to the truth of such matter pleaded in bar. Since it was not a judgment of a court of record and the allegations of the answer touching the matter are deemed denied, a finding thereon should have been made.

"The judgment is reversed."

A Rational System of Pruning Walnut Trees

By Vincent F. Blanchard

WITH the coming of the dormant period for trees walnut growers are again asking the question, "What is a rational system for pruning walnut trees?" For a number of years walnut growers have been practicing pruning, but in general their work consisted largely in cutting off lower branches and in the elimination of dead wood. They did not consider pruning as a means to increased production and better nuts but took it for granted that branches would hang low and wood must die in the center.

Deciduous fruit trees have been studied for many years and a rational system of pruning has been worked out for them. Citrus trees have been studied to a great extent and much has been learned for a rational system of pruning that class of trees. Walnut trees have not been studied so extensively as either of the above mentioned classes of fruit trees, and not as much definite knowledge has been accumulated concerning them in relation to pruning. It is hoped, however, that investigations now under way on this subject at the citrus experiment station under the supervision of Dr. H. S. Reed may eventually result in a better understanding of the principles involved. The knowedge which has already been acquired of the fundamental principles of pruning deciduous fruits and citrus will go far towards the solution of this problem. In fact, there is enough evidence at hand of the fundamental factors to consider in pruning walnuts to give us a working basis until the experiments underway at the citrus experiment station and be worked out.

Sunlight Important

In studying the activity of walnut trees it has been observed that there are a number of factors to consider in the determination of a system of pruning. In old groves, with the trees almost touching, it has been observed that the trees in the outside rows are the greatest producers and in those same orchards where a tree has been taken out the trees around the vacant place produce more nuts than the average trees in the orchard. A close examination will show that by far the greatest amount of the nuts are borne on the portion of the trees away from the orchard in the case of the outside rows, and towards the vacancy in the case where one tree had been removed. The important factor to consider there is that the portions of the trees receiving the most light produced the greater amount of nuts. That holds true throughout the entire orchard for where the branches are shaded most of the time only a small amount of nuts is produced. Wherever sunlight strikes the foliage nuts can be seen.

Light is an exceedingly important factor in all plant life. If leaves do not receive sunlight they cease to function normally, they become parasitic and do not help to supply food. An examination of any unpruned walnut tree will show that. As stated in the first part of this article the walnut grower has taken it for granted that branches and foliage on the inside of the tree will die back but he failed to figure out why the branches died. The explanation is simple for it comes right back to the important factor of light coming in contact with foliage. Since the trees have been left to grow year after year without pruning they have become so dense that it is impossible for sunlight to penetrate to the interior foliage. Foliage on the inside soon dies for the leaves have failed to receive the sunlight necessary to permit transformation of plant food to forms which can be utilized for tissue building.

Pruning Mature Trees

A walnut tree in order to bear a maximum crop of good nuts should have all its leaves in good working condition. Since the greater source of food comes from the air through the leaves in the form of carbon dioxide it is all important that those leaves be in a healthy condition throughout the entire season. In order to get such a condition it is necessary that the tree be opened sufficiently to allow sunlight to penetrate to all parts. Some trees are naturally open and do not require artificial opening up but since most walnut trees have been left to grow with no pruning outside of removal of dead wood and under cutting it is necessary for the greatest portion to have a moderate opening up.

The pruner should examine the tree carefully before making any cuts and determine what limbs can be taken out which will allow sunlight to penetrate and yet not injure the tree. In most cases there are large limbs growing straight up in the center of the tree whose removal will hardly be noticed from the outside. It is better to take out whole limbs rather than many small branches. That simplifies the work and makes it less expensive. It might seem as if a large portion of the bearing area is removed by so doing, but in fact the bearing area is increased, for sunlight is allowed to penetrate and fruit wood forms on the inside where before none could grow. Nuts are consequently borne both outside and on the interior fruit wood. The pruner should use good judgement in determining how much to thin out. If there is a large number of limbs to take out, the job should be spread over more than one year for there is danger of shocking the tree by excessive cutting at one time. If such a method of pruning is practiced the amount of pruning in future years will be reduced for little wood will die on the inside from shading out. It might well be stated at this point that all of the dead wood in walnut trees is not caused by shading out for in many instances drouth injury will cause it.

This method of opening up the top of old walnut trees has been used by a number of progressive walnut growers with success. Among those who are using this practice successfully is Carlyle Thorpe, general manager of the California Walnut Growers Association.

In order to make cultural work easier it is necessary to cut off some of the lower branches. Every year there are a few lower branches which hang down in the way, and these should be cut off. Such branches should be cut back to the point from which they came and not headed back. That applies as well to thinning out within the tree, for heading back walnut branches results in weak growth. The cuts should be made so that they will heal quickly. A cut on top of a limb will not heal over, while one on the under side will heal quickly.

Some walnut growers use the axe as the chief pruning tool. Although some think they become very efficient in using such a tool, it is a poor practice. An axe cut is very smooth and a wound dressing will not cling to it as well as to a wound made by a saw. A saw is the best pruning tool to use, and for quick work one attached to a long handle is very efficient. With such a tool much of the work can be done from the ground and it relieves the pruner of much climbing. The cuts should be close to the trunk or limb to facilitate healing over. Soon after the cuts are made a good wound dressing should be applied to prevent the entrance of heart rot fungi. A paint should be

(Continued on Page 500)

PROBLEM OF THE ORCHARD

(Continued from Page 495.)

ment is usually followed during the late winter or early spring months by applications of more concentrated and more quickly available nitrogenous fertilizer.

The use of liberal quantities of suitable organic materials supplemented by reasonable amounts of quickly soluble nitrogenous fertilizers has given commercially successful results in improving old and neglected orchard soil and tree conditions in a large number of instances under our observation.

There are a number of striking illustrations of the recovery of an extensive acreage of decadent citrus trees in several districts in California during recent years. A study of the methods used in handling the soil problems in these orchards will be worth while for every interested citrus grower.

Resurfacing Orchard Soils

The trees in some of the older citrus orchards, particularly where the surface soil was scraped off in leveling the land for planting and irrigation, have been found to be unproductive, primarily as a result of the removal of the original surface soil. In some of these instances the experiment has been tried of hauling additional soil onto the scraped off areas and resurfacing them with several inches of fresh or virgin soil. The trees in the resurfaced areas have shown marked improvement both in foliage and fruit within a short period of time. In one case the increased yield of the trees in the resurfaced area the first year after this treatment was applied as compared with the production of the trees in a similar but untreated area was sufficient to pay the entire cost of resurfacing. The beneficial effect of resurfacing was not confined to the year following the treatment, but has continued to be apparent during eight subsequent years.

In the orchards under my observation where resurfacing is being carried on the fresh soil is hauled onto the orchard and spread between the trees to a depth of five to six inches. After resurfacing the orchard is plowed so as to mix the fresh with the older soil to some extent. Care is used not to pile the fresh dirt around the tree trunks or near them so as to avoid possible subsequent damage to the trees from this cause. Downhill hauls are arranged wherever possible in order to reduce the cost of moving the dirt. This work is best done when labor and ranch equipment are least engaged with regular orchard work.

Data are being collected in the East Highlands district as to the details of cost, amount of soil needed for resurfacing under different conditions and the value of improved tree production resulting from this treatment.

Conclusion

The maintenance of citrus orchards for long periods of time under California conditions in healthy condition of growth and profitable production is receiving the best thought and attention of many growers and highly trained specialists. There is adequate evidence at hand which shows that under favorable conditions citrus trees can often be maintained in satisfactory fruiting condition for more than 50 years. With accumulating knowledge and experience I believe the future will show greater possibilities along this line. In this connection information secured from studies of tree conditions in productive and healthy old citrus orchards, not only in California but in other citrus regions of the world as well, will certainly prove to be valuable.

The old orchards in which the trees now show evidence of decline require immediate attention. The problems in such orchards are usually many and no single factor can usually be held responsible for the unsatisfactory behavior of the trees. The condition of the soil, the kind of cultural treatment, the effect of previous frost or wind damage, the injuries from insect pests and fungus diseases, the inherent characteristics, condition of growth and other factors must receive careful study and consideration.

It has been demonstrated that decadent old citrus orchards can often be handled so as to renew their vegetative growth and bring about a recovery of normal production. Whether the expense and care will be justified by returns can only be decided after consideration of each orchard.

KIRKMAN NURSERIES

Established in California in 1888

RELIABLE TREES AND VINES

are essential to the great fruit industries of the Pacific Coast.

Our experience has been gained by 32 years of progression in the nursery and orchard business in California.

Reservations are now being made for future deliveries.

We offer our services in undertaking the planting and care of commercial orchards on large scale.

PROBLEM OF CITRUS ORCHARD DECLINE

By C. B. Messenger Before State Fruit Growers Convention

WHILE I do not think our friends, the trees, have the attributes of humans which some enthusiastic tree lovers have ascribed to them, still there is a close enough parallel that I may change my subject for about 60 seconds, to "Problem of Folks' Decline."

The particular old folk, the victim for purpose of this illustration, finds himself with occasional uneasiness of joints and lacking in the color of skin which indicates superabundant health and youth. The orchardist would say: "He has chlorosis and is slightly bark-bound." As soon as the victim discovers his condition he rushes to his family doctor and gets a pill. Result nil. He seeks the specialist and is told "Turkish baths and massage will do the trick." Another specialist finds that the whole trouble has been caused by the "falling arch" or breaking down of the instep, which takes weeks to correct, with possibly no results to general health. The next rearranges the spinal column. The next finds poison in sacks at the roots of the teeth—he extracts them. The next takes the appendix. The next says "It's all due to eye-strain—a new pair of glasses—$50 please." And on forever or at least so long as any thing remains in the pocketbook to be extracted—then——! Old Man Common Sense comes along and points to a figure in stone, or is it bronze, a work by Rodin called "The Thinker."

"The Thinker" has a faculty of starting something, and our victim finds himself repeating: "Eat less—drink more (water)". "Burn less gas—more body wastes with vigorous exercise and prespiration". "Jazz less—sleep more". "Inhale deeply of pure air and California sunshine". By following these and other simple paths by pleasant brooks to the fountain of youth we are renewed like the eagle.

But the orchard, the old run-down orchard with yellow leaves, dead twigs, gum disease, scaly bark, scale on the bark, fruit, leaf and twig, no aphis, perhaps, for aphis like lush tender growth, but there is red spider, mealy bug; occasionally fruit—half sized, alleged fruit. The grower is dismayed—disheartened. He seeks a panacea, a cure-all. He wants it quick. It must work instantly for the mortgage is due. It must work cheaply for there are no funds to work with. He appeals to agricultural department folk, to the university, to horticultural commissioners, to farm advisers, to the farm paper, and there are heart aches for he has not yet appealed to "The Thinker", and help is impossible except through him.

But one day there comes promise of cure. Two bits worth of dope, an auger and a hole into the heart of the tree are to do the work and perform wonders. The dope is plugged into the hole and the orchardist sits down to see the miracle. The next specialist finds the tree bark-bound—slits through bark from branches to ground will renew the life and productivity, or perhaps the tree should be ringed or should have rusty nails driven into the trunk or should have the entire top removed that it may form a new head, or "earth salts", or smelling salts, or star dust should be spread about or incantations recited or sung.

Why smile! This is not comedy; it is tragedy, tragedy, because more common than most of you who attend this state convention anticipate.

This is not an arraignment of the vast majority of citrus orchardists, those who are supplying the great bulk of oranges, lemons and grapefruit which are required to fill the continuous procession of cars—only ten minutes apart for 365 days of every year, for those orchardists do not have bark-bound, yellow leaved, dead twigged, root bound, scale infested trees.

How do they do it?

Ask them, the next door neighbors, of the one who drives rusty nails in his trees, who if they would succeed must worship at the shrine of "The Thinker" and open their eyes to the procedure of others. And the great fundamental is successful soil building.

Building soil is not an overnight process. California's rich foothills have not had their fertility destroyed in a day nor a month nor in many years, but ultimately some have succumbed. They may be rebuilt? Surely! But after many days and by "The Thinker". It involves so many steps under such varying conditions that a volume is necessary—at least these few minutes would not start the subject.

But remember and don't expect to inject, or electrify, or dynamite, or apply in one dose the cure for all the ills of the soil and the orchard.

Of course there are ills above ground —frost, heat, bugs, birds, fungus, bacteria, pruning, rebudding, a thousand —or, at least a dozen—other angles of tree culture.

But, honestly, is there one here who has ever seen a run down orchard on soil kept in perfect tilth?

However, please bear in mind that the lesson I would convey is that the maintenance of the profitable commercial orchard calls for many interviews with "The Thinker". If one imagines that perfect tilth would give to the tree sufficient strength to overcome the ravages of insect and fungous pests then again he is mistaken. Perfect tilth adds to the resistance the tree may put up in face of fierce insect attacks, but the use of spray pump, of gas tent, and, sometimes, a bit of moral suasion on the part of horticultural commissioners, needed.

STATE FOREST WORK

By Charles H. Shinn

The movement towards better and better forest work by each state is gaining strength, and cooperation increases between the state and the national government in such matters as fire protection, and reforestation. Here are some items about state forest work:

Louisiana puts a tax of 12½ cents on every 1,000 feet of lumber sold in the state. This money is used in forestry. The Texas Forest Association is trying to get the same sort of a tax. The Oklahoma Forest Association asks for protection of the forests from fire, insects, etc.; for more county, city, state and national forests, and for fuller support of the forest policy of the United States.

In Pennsylvania the salary of the state forester (Gifford Pinchot) has been increased from $5,000 a year to $8,000. Recent reports show that this state, which once produced its own lumber supply and much more, now suffers a financial loss of $80,000,000 a year because of the destruction of her forests but has 6,000.000 acres of now unused and neglected land which might be again covered with good forests. The campaign is therefore to fully utilize this great area.

A wide awake announcement of one of the great lumber companies of Minnesota says that America uses lumber "for everything from matches to motor cars," and quotes the forester's recent remark that this country "contains manufacturing industries which use wood exceeding in volume of product and in variety all the rest of the world put together."

PLANTINGS OF THOMPSON SEEDLESS

There is much valuable information contained in the latest bulletin of the viticulture service of the state department of agriculture which should be known to every grower in California. It is interesting to know that in 1920 the planting of Thompson Seedless grapes increased over 80 per cent. The total acreage of Thompson Seedless in 1919 was 78,827. Plantings from 1919 to 1921 inclusive were 63,200 acres.

It is estimated that an average crop of Thompson Seedless grapes is one ton per acre. At this rate, providing no more Thompson Seedless are planted, the Thompson raisin crop in 1924 should be 142,027 tons. Compared to the raisin crop of last two years this would be just 28,000 less than the total tonnage of all varieties of raisins raised in 1920. In other words, if no further plantings of grapes are made, the raisin grape acreage in 1924 should produce a crop in excess of 350,000 tons or more than double the 1920 crop.

RAISIN IMPORTATIONS

Ten times as many raisins were shipped into the United States from foreign countries during the 1920-21 season as in any year previous. The high prices paid for raisins in America and the exchange rates made the business so profitable to foreign merchants that stocks which had been purchased for their own consumers were never unloaded but reshipped direct to the United States. The tabulation of the countries from which raisins were imported to the United States during 1920 shows heavy exports from 13 countries which never raised a grape.

ARSENICAL SPRAY ON PEARS

As evidence of the splendid campaign of education conducted by Fred C. Brosius, horticultural commissioner of Sacramento County, in conjunction with the state department of agriculture, there has been no clash with eastern health authorities over the excess of arsenical residue on pears shipped from Sacramento County during the pear season which has just closed.

In his report to the board of supervisors, Mr. Brosius states: "The great bulk of our work has been fresh fruit inspection as this period is the load of our shipments east. Our work was increased considerably, owing to the fact that a close inspection was necessary to prevent shipments of pears covered with spray residue, the fruit in many orchards being required to be wiped before being packed.

NUMBER OF PEAR AND PRUNE TREES ON COAST

There are 866,634 pear trees of bearing age in Washington, 727,444 in Oregon, 2,305,656 in California, an increase of about 100 per cent in ten years, and of prunes of bearing age, 875,363 in Washington, 2,999,480 in Oregon and 9,768,436 in California. These figures include all varieties of plums and prunes. The three coast states have far more than half of all the bearing trees of these species in the United States.

KUDZU VINE

The Kudzu vine (which Japanese say should be "kuzu") is sparingly grown for fodder in California. Dr. M. Calvino of the Cuban agricultural station writes:

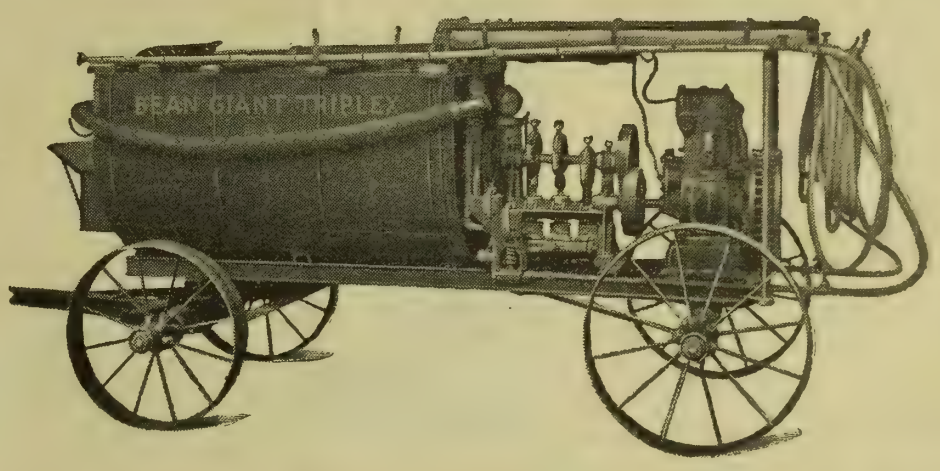
"Pueraria hirsuta, a climbing leguminous plant, native of China and Japan, has been suggested as a perfect fodder for the warm southern parts of the United States. In Florida it has been reported as the only plant which can take the place of the 'velvet bean' (Stizolobium) for fodder and green manure.

"The author has experimented with it since 1913 in the high central plateau of Mexico where the aerial parts of the plant dry up in winter but the fleshy roots in spring throw up vigorous shoots which develop into fine stems covered with much foliage, the leaves attaining a length of 12 to 18 mm. For harvesting it is sufficient to let it dry in the sun for 24 to 48 hours. The plant is propagated by seed or by root cuttings.

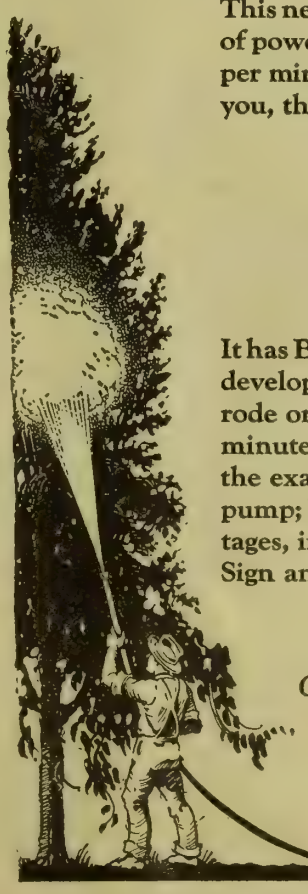
"At the Cuba agronomic station, Pueraria hirsuta has been found to grow vigorously, so much so that it covers and smothers all other vegetation, even when arborescent (banana) and produces abundantly seed of high germinating power (100 per cent). Regarding the seeds and pods the following data are known—average weight of 100 seeds 18.25 grams, average number of seeds per pod, eight. Hay made from this plant is very rich in albuminoids; the analysis of a sample from Florida gave—albuminoids 17.4 per cent and carbohydrates 30.2 per cent (as against 16 per cent and 31 per cent respectively for hay made of alfalfa. It can be fed to all kinds of animals and does not upset them. Powdered and mixed with water it can be given to poultry."

The smallest farm can afford, and should have, an engine for grinding feed, sawing wood, pumping and similar work. There are combined outfits built especially for general all around use.

During wet seasons a small engine attached to harvester for operating cutter bar helps amazingly.



A Sprayer Many Growers Have Long Wanted



This new Bean outfit meets the demand for a light-weight rig with plenty of power, high pressure, and big capacity. It delivers 12 gallons of liquid per minute at 300 pounds pressure. If that capacity is about right for you, then the sprayer you ought to have is a

"Bean" GIANT TRIPLEX

It has Bean porcelain-lined cylinders, the most satisfactory cylinders ever developed for a sprayer pump; threadless ball valves, which cannot corrode or stick tight and which can be opened up entirely in less than two minutes; Bean patented pressure regulator, which holds the pressure to the exact point desired, and saves much wear and tear on engine and pump; long-wearing eccentrics instead of cranks; and many other advantages, including the absence of stuffing boxes and stuffing box troubles. Sign and send the coupon, which describes entire Bean line for 1922.

Bean Spray Pump Co.

OILPULL DESIGN
Means Oil Burning Perfection

The OilPull tractor is different in looks as well as in performance. It sets the style in modern Oil Burning tractor design and in cheap farm power.

As a result of this perfected OilPull design, cheap farm power is now a reality.

OILPULL
"The cheapest farm power"

Note what has been accomplished by the perfected OilPull—(1) Lowest fuel cost, per acre worked or belt job done. (2) Lowest repair cost per year. (3) Longest average life (over 10 years).

These remarkable records have definitely proved that the OilPull oil burning tractor is the final answer to the American farmers' demand for cheap, reliable power.

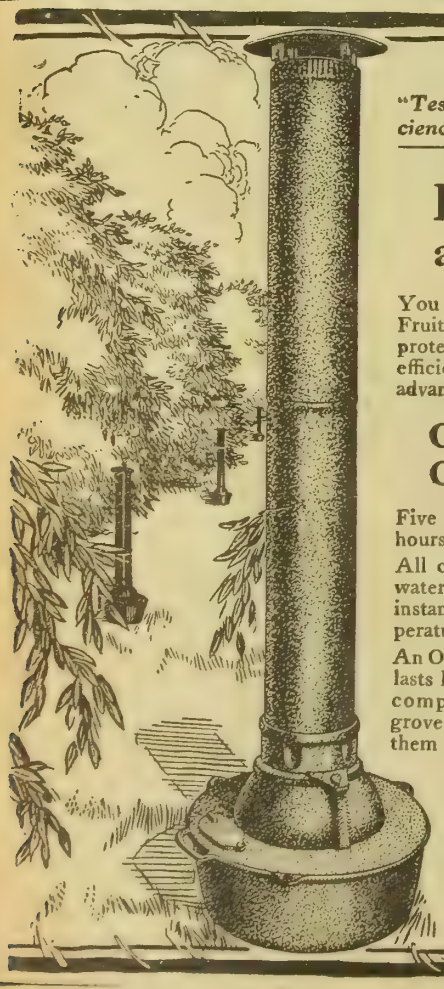
You ought to know all about the OilPull. There is a size that will make money for you, and prices are right. Investigate.

ADVANCE-RUMELY THRESHER CO., Inc.
17-19 Main Street, San Francisco, California

The Advance-Rumely line includes kerosene tractors, steam engines, grain and rice threshers, alfalfa and clover hullers, and farm trucks.

RUMELY OilPull TRACTOR

(H-60)



"Tests on Oldsmar Heater show 100% Efficiency."—Prof. Peeples of Armour Institute

Frost Insurance at Minimum Cost

You insure your house, why not your crop? Fruit growers everywhere can have assured crop protection through the use of this improved and efficient heater which has a number of notable advantages over any other kind.

Oldsmar Frost Protector Costs Less To Operate

Five gallons of distilate fuel oil burns 10 to 15 hours according to temperature desired.

All cast iron (stack excepted), the Oldsmar is waterproof and cannot get out of order. Lighted instantly, it requires little attention and temperature regulation is positive.

An Oldsmar costs less than other cast iron heaters, lasts longer, requires fewer to the acre; affords complete protection — California and Florida grove owners and truck farmers are ordering them by thousands.

Write today for literature and full information about how the Oldsmar can protect your crop

A RATIONAL SYSTEM OF PRUNING WALNUT TREES

(Continued from Page 497)

used that will contract and expand with varying climatic conditions. Those with an asphaltum base are very satisfactory and cheap. White lead is not satisfactory for the wood dries out and cracks. White lead and linseed oil together have been used by some with success, but it is not so satisfactory as paints with an asphaltum base. A good practice is to attach a brush to a bamboo pole or some other light material and reach as many of the cuts as possible from the ground. Carrying a pot of paint up into the tree wastes much time.

Improvement of Close Planted Trees

Many groves have been planted so close together that the branches of one tree grow against those of its neighbor. This is usually the case where the planting is 40 by 40, but it sometimes occurs where the trees have been planted 50 by 50, especially on rich, deep soils. It is practically impossible to prune each tree in such cases so that it will function in the best possible way, the trees are so close together that the lower branches are shaded even though they have been pruned. A remedy for such a condition is to take out every other tree in every other row. A number of walnut growers have tried this and have found production greatly increased. It gives each tree light on all four sides. Of course it is necessary to thin out the branches of trees left.

Pruning Young Trees

Much of the poor condition of walnut trees in old groves today can be prevented in new groves if proper attention is paid to pruning from the beginning. It is a common thing to hear walnut growers say that it is wrong to prune a walnut tree while it is young. Whether they are right or not depends upon their definition of pruning. It is true the heavy cutting is enervating or devitalizing, but it is just as true that the tree can be trained properly by moderate pruning.

In planting a walnut tree a hole should be dug at least three feet wide and deep enough so that the roots will be as deep as in the nursery. At the same time the tree is put in position place an eight foot stake next to the tree. Surface soil is thrown into the soil to give the tree a good start. The tree as it comes from the nursery is usually five to six feet high. The trunk should be cut back to a height of 15 to 20 inches from the ground, and then whitewashed to prevent sunburn and keep its temperature more uniform. The following spring there will be several shoots start and one of these should be selected for the main trunk of the tree. The others should be pulled off while young and succulent. The one shoot left grows rapidly, and in order to keep it straight and prevent it breaking down it should be tied to the stake as it grows. If it has grown to a height of several feet the first year it may be cut off at about six feet and then whitewashed. If it has not grown that much it is left alone to continue its terminal growth, except that it should be whitewashed. In the former case several branches will start along the limb. From three to four of these should be selected as the main limbs of the tree. It is important to so space the limbs that there will never be danger of them growing against each other and becoming weak. The remaining branches should be tipped slightly to check their growth and give the main limbs the ascendancy. They should not be cut off completely for it is highly desirable to have as much foliage as possible early in the season. That is because the tree depends upon its foliage for its greatest food supply.

The main limbs should never be cut back, but allowed to grow naturally. It is sometimes thought by growers that in order to make a walnut tree stocky from the start the limbs should be cut back at from 12 to 15 inches. What really happens is that rapid growing shoots are produced which are weak in character.

Limbs will be far stronger if not cut back. If cross branches and limbs which have a tendency to fill the center are taken out while the tree is young much of the heavy cutting can be avoided before it becomes old. If such limbs and branches are removed from year to year the tree can be kept open to keep it in a healthy condition.

Summary

Penetration of sunlight to all parts of the tree is the most important factor to consider for pruning walnuts. A removal of a few limbs and branches will allow the penetration of sunlight.

The use of the axe as a pruning tool should be discontinued. Use a saw and make clean cuts close up.

Start the tree right by getting three or four well spaced main limbs which are never to be cut back. Cut out cross branches, limbs taking up the center and lower branches interfering with cultural practices.

Paint all wounds with asphaltum paint to prevent the entrance of heart rot fungi and insects. Heart rot fungi have ruined many orchards.

Weather Preparedness

By Dr. Ford A. Carpenter

NEWSPAPER files show that every autumn as regularly as the year rolls around there is printed and given wide circulation through the various news agencies some story as to what the weather is going to be for the coming winter. As truly as "Hope springs eternal in the human breast" so does a craving exist for some indication of the winter's weather; whether it is to be cold or warm, wet or dry. Perhaps, some day, when meteorology becomes an exact science and we know the underlying principles of weather control over a long period of months, it will be possible to scientifically prepare a seasonal forecast. But at the outset let us state that although meteorologists have made long strides in the unearthing of weather secrets they have not found a reliable way of telling what the next season is to be.

If the reader will recollect the phraseology of seasonal forecasts he will find that they all fall into one class of prophecies—calamities. It is far easier to remember a disaster than a long period without a disaster. A cold winter or a dry winter deeply impresses itself upon one's mind. We instinctively think back upon some paragraph in a forgotten newspaper that told us that the winter was to be severe, whereas we would forget a forecast of a mild or crop making winter.

There are two popular ways of presenting seasonal weather predictions: First, by compiling an extended series of observations and finding a fancied recurrence. Second, by noting the habits of birds and animals in the autumn and deducting from their behavior their supposed preknowledge of weather conditions. Both of these methods fail to measure up to the needful 51 per cent of verification.

For over a hundred years weather cycles have been prepared by students, and ardent advocates of an 11 year cycle, 32 year cycle, etc., point with pride to the infallibility of their system. If upon examination of their data is found an absence of agreement such will be explained away by the remark: "Oh, we have to make some allowance." To prove to our own satisfaction that rain cycles, for example, do not exist in California it is only necessary to look over a 50 year or a 70 year rainfall table. Only by making unscientific allowances is it possible to let one's prejudices rule.

It is the squirrels who are reported to have stored up unusual quantities of food, the prairie dogs likewise hoarding up supplies that show to some minds that the winter is to be unusually severe. The real explanation, however, may be that the animals are acting in response to the existing weather conditions. If the season is early, i. e., cool months during the late

summer, animals will be observed busily storing up food, and the quantity will be found to bear a direct ratio to the abnormal existing weather.

The real preparedness for coming seasonal weather, whether it may be wet or dry, hot or cold, is in making provision for the extremes. It is the farmer who does his regular fall and winter plowing at the appointed time by the calender that will be ready for the rains when they come. It is the thoughtful fruit grower who within the next few weeks takes an inventory of his oil pots, storage tanks and thermometers that will be ready for the autumn and winter frosts. The fruit grower this season will use his experience of last year and check up his temperature indicators, those invaluable adjuncts to fruit protection. If in the past he has not availed himself of the opportunity offered to have his thermometers tested he will see to it that the Thanksgiving frosts do not find him unprepared.

Spring Management of Bees

By H. Perkins

SPRING management rightly begins in the fall when bees are preparing for winter. The beekeeper should see that each hive contains at least 30 pounds of honey for winter stores. No very weak or diseased colonies should be allowed to winter. Each one should have a good queen. These precautions will as a rule simplify the work in the springtime.

The spring season begins in Southern California with the willow and eucalyptus bloom usually about the middle of January. In the more elevated sections where neither are to be had it will be about a month later. Bees must have a supply of fresh pollen in order to commence breeding to any extent. When you see the workers coming in loaded down with pollen you may look for spring brood rearing to be nicely under way in a few weeks. It is of little use to open the hive or attempt any manipulation until spring brood rearing has advanced for, say, three weeks. Then a thorough inspection should be made. Some colonies perhaps will be found to have no brood at all when the others have several combs partly filled. This is evidence of queenlessness in most cases or else of a failing queen. In either case it is impractical to assist them by drawing brood from another hive. A better plan is to unite what remains of the colony with the one nearest to it. A good way to unite is to place the combs and bees of the queenless one in a super. Now spread a newspaper on top of the frames of the hive with which it is to be united. Make a few small holes through the paper, then set the super, combs, bees and all on the paper and put on the cover. The bees will gradually filter down through the paper and take up life in the new home without creating any disturbance. Always be sure that both colonies are free from disease before uniting. If you are not already posted send to the department of agriculture at Washington, D. C., for publications on bee diseases.

It is important at this time to see that all colonies have at least 20 pounds of honey, for bees will not increase rapidly when their honey supplies are low. It is not a safe plan to feed sugar syrup too early in the spring because the nights are cold and there are no young bees in the hive. When old bees are fed cold syrup they are very apt to contract dysentery and die.

A better plan is to borrow a comb or two of honey from another hive to reenforce the one that is light. Bees will winter better and increase faster in a single than in a two story hive.

There are various systems of manipulating the brood combs, calculated to assist the bees in rapidly filling the brood chamber with brood, but in the writer's opinion they are of questionable value, at least in the hands of a novice. See that your colonies all have a good food supply, are free from disease and have good queens, then let them alone till they have increased sufficiently to occupy the entire brood chamber. Then they must have more room or they will swarm. The season will by that time have advanced to about the middle of March. Drones will be flying. It is then up to the beekeeper to adopt methods calculated to prevent swarming if he does not wish to increase the number of his colonies or else to divide if he desires more.

Now there are several ways of making increase. I am going to give my way of dividing a colony into two equal parts. About noon on a bright day when bees are flying freely is the proper time. I place about half the brood and one-third of the bees in the new hive, which is left on the original stand, while the parent hive containing the queen is moved to a new stand at least 20 yards away. The returning field bees will enter the new hive in sufficient numbers to bring it up to the same strength as the parent hive. Now our new colony is queenless, of course, but will raise a queen in three weeks if none is supplied. It is much better to buy one from a queen breeder, in which case division should not be attempted till the new queen arrives. She may be introduced at once and in three days time will be laying.

When no increase is desired an entirely different course must be followed, the object of which is to prevent swarming. The stronger the colony the more honey it will gather. In a general way this is accomplished by giving them plenty of room and plenty of work to do drawing foundation. As soon as the colony fully occupies the brood chamber put on a full depth super and if necessary later put on another. Move some of the brood combs into the super, replacing them with full sheets of foundation as soon as the bees are able to draw comb. This should be done before the colony has begun building queen cells preparatory to swarming. Once they have taken the notion to swarm it may be difficult to break it up. Of course all this requires some experience. The questions will arise: when is a colony crowded; when are they preparing to swarm; when will they draw foundation; and so on. A visit to the yard of a professional bee man will usually put you right. Where a yard consists of two or more colonies there is danger of getting robbing started if combs are exposed too long or hives left open for more than a few minutes where the honey flow is light. One of the first things the beginner should learn is to detect the presence of disease, for sooner or later he will have to encounter it.

PATCHOULI PATCHES

Years ago patchouli was somewhat grown in California, but of late years the supply seems to have waned. It is a mint, native to India, and grows with little care to three feet high. In its native country patchouli is the most common perfume. Botanically the plant is Pogostemon Heyneanus.

Studying California Conditions

WE HAVE seen the statement that it takes between three and four years to put a new model of a truck, an automobile or a tractor on the market. In the first place, the manufacturer must investigate the highway or, in the case of a tractor, soil and cultural conditions which are to be met. There have been some bitter disappointments on the part of California tractor purchasers because of buying tractors proven entirely satisfactory in certain eastern sections but unable to stand the gaff in California. This has occurred in the case of thoroughly honest and dependable manufacturers, and when they have learned of the lack of complete success on the part of their product they have set about to learn our conditions and meet them with efficient equipment. Again, others have come here before entering the field and followed tractors at demonstrations and in every day orchard or farm work, and California and incidentally the manufacturer have benefited by these investigations.

Recently it was our pleasure to talk with R. C. Brewsaugh of the Allis-Chalmers Manufacturing Company. He was just in from a visit to Imperial Valley at a time when Imperial gave a fine exhibit of some of her best growing weather. Mr. Brewsaugh concluded that Imperial's conditions, both of soil and climate, called for equipment different from that of any other section he had seen in the East.

But besides Imperial many other sections of California had been investigated by him, and the one great lesson developed was that "Californians sure do plow deeply." To a pioneer who recalls the days of the big gangs turning over two or at most three inches of soil, today's depth of culture in California's deciduous and citrus orchards and, we may add, in many of the grain growing sections, is a revelation. The conditions which call for this deep culture demand a line of implements entirely different from those used on eastern farms.

Soil resistance in California is generally from 900 to 1,200 pounds per 12-inch plow as against an average of about 450 or 500 pounds in the wheat and corn belt, a fact emphasized by Mr. Brewsaugh. It requires power, lots of it, to farm properly in California, and it is a mistake for a farmer to purchase a tractor that does not have sufficient power to pull implements that get down and rip things us. Mr. Brewsaugh is one of five pioneer tractor men in the United States. He was a captain in the late war assigned to tractor production and is recognized as one of the best authorities in the United States on tractors and power farming.

Mr. Brewsaugh is connected with the home, or Milwaukee, office of the Allis-Chalmers people, and in securing first hand information has carried back with him ideas which will be worked out and result in other aids to California power farming.

The Small Farm for Retired Farmers

By M. E. Bemis

CAN a man make a living on ten acres? The usual and logical answer is "It depends upon the man." Likewise logically it depends upon the soil. Some farmers can't seem to settle down on ten acres. They feel cramped because they want to do big things on a big scale. Such men have no business to try to confine themselves to a small acreage. Then, too, there is the man without farm experience, and that kind is apt to pay dear for his inexperience, and on a small acreage this holds more true than on a large acreage.

I know of men who are specializing on some one or two crops or with poultry, truck crops or fruit, who are doing well on ten acres or less. This is entirely practical for the specialist, and such men often do better than many of the big farmers on a much larger acreage.

The ten acre farm, except for the specialist, appeals most, I think, to the farmer who has made his stake, big or little, and is only concerned in keeping his capital, or in other words, in making a living, free from the strenuous life of the big farm. He doesn't want to be worried with hired help and neither does he want to be tied down to the tasks of the specialist. The farmer who has led an active life is no more contented to settle down and do nothing than is the banker or merchant who has been successful. He wants to stay in the harness only he would like that the harness be not too heavy.

Quite often he has some pet scheme that he wants to try out, some new crop that he wants to raise. He wants to plant a garden, keep a few chickens, maybe of some breed that he has always fancied but which he has never had an opportunity to breed. To this class of farmers, more

Small Farm Home in Arizona

Upper photo: Home of E. F. Van Kirk in Salt River Valley. Lower: Edge of the little field of Mexican June corn on the Van Kirk farm.

I believe than any other, the ten acre farm appeals.

E. F. Van Kirk has not retired, although he has arrived at that stage in life when one is privileged to retire if he feels like it and wants to and can afford it. In other words, he is a grandfather, and any grandfather may be excused for slowing up a little if, as I have just said, he wants to and can afford to. Van Kirk doesn't want to retire. Mrs. Van Kirk isn't ready to quit either, so there are two perfectly good reasons why they are not going to gather any moss. They are just deciding to take things a wee bit easier maybe and live so as to get some of the enjoyment out of life. Van Kirk is one of the Old Timers, 33 years I think in Arizona. A good share of that time he has been a dairyman. Like many others he made his stake with the primitive dairy methods in vogue here 20 to 30 years ago. He has stuck pretty consistently, breeding draft horses, selling cotton seed products to brother dairymen, raising some cotton, but always with an affection for the old cow that will not down.

Now the greater part of his farm is rented. But on the home place out on North Central Avenue, near the Grand Canal, Phoenix, this miniature farm is being made to respond to the magic touch of a master farmer. Van Kirk says, "There is just as much work on a ten acre farm as on a quarter section." In a way he didn't mean just that, but what he did mean was that the different crops, if one grows them, require just about as many operations as on a larger farm.

Here on his ten acre playground he is raising corn, Sudan grass, millet, alfalfa, melons, grain sorghums and a garden. Cows, pigs, chickens and horses are kept. Of course, there is work and hard work, but because he is having now a chance to do some of the many things that all these years he has wanted to do there is more enjoyment to be had from the work and consequently less fatigue.

Now besides the enjoyment the Van Kirks are getting no small amount of revenue. The 200 laying hens pay, in addition to their own feed, the grocery bill and the few incidentals that are usually counted as a part of the living expenses. The three cows furnish all the milk and cream needed, a little is sold as sweet milk to a neighbor, and the cream is sold to a creamery, bringing an average of $25 a month. There is some revenue from the hogs, but the chief returns at present are from what might be termed truck crops. A good deal of corn is sold as roasting ears, bringing a good price. A garden furnishes tomatoes, squashes, etc., the total sales of which bring a good amount.

Meanwhile the forage is accumulating. The acre of millet made three tons of hay. The acre and a half of Sudan has been cut twice, yielding better than two tons to the acre for each cutting and two cuttings more this season. The grain sorghum will make considerable forage besides grain for the chickens.

More cows will be kept this coming year and possibly more chickens.

As I have said at the beginning, general farming on a ten acre ranch would not especially appeal to a young man with an ambition to get rich quick, but for the farmer that has reached a time of life when he feels that he wants to let up a bit, who still has a great deal of "kick," and wants to do as he pleases, this ten acre farm of E. F. Van Kirk's has convinced me that for men like him, ("and may their tribe increase") the small place close to town is a glorious way for a farmer to "retire."

"The European and foreign sales of Washington apples in 1921 are twice the volume of last year," says Frank Harkness of the Earl Fruit Company.

"We find that the apple most in demand by the European trade is the Yellow Newtown, and they apparently prefer the small sizes because there are more of them to the box. We are having no difficulty in arranging the financial needs although the exchange rate is somewhat of a handicap."

Mr. Harkness adds that the West will always have the European trade if proper care is exercised in handling the fruit, for the Western apple pack is a standardized product of higher quality than is shipped by the apple growing sections of the eastern states.

CONSERVATION OF MOISTURE

(Continued from Cover Page.)

particularly in heavy soils, open up and admit air to the lower depths.

Keep plenty of "yeast" or humus, or vegetable mold, or whatever you choose to call it, but keep right conditions for bacterial action.

Tight soils hinder travel of moisture to the roots.

Regarding necessity of deep plowing Prof. Lipman in Circular 98 of the Experiment Station of the University of California in calling attention to the objects of plowing and cultivating and the necessity for a supply of soil air says:

"Careful observation and experiment have amply shown that plant roots must have air to develop successfully. They have also shown air to be essential for the life of all of the beneficial soil bacteria upon which we depend for the solution of plant food in the soil and for the addition of nitrogen from the air. In other words the most vital factors in successful plant growth are dependent on a good supply of air in the soil. Such a supply of air can best be furnished and maintained through plowing and cultivating. Besides accomplishing the objects above named, tillage operations are important because they make possible the turning under for humus formation of organic manures and for turning under other forms of organic matter and other fertilizers. They keep down weeds, they make a larger reservoir for water, and they prevent evaporation of water from soils."

In addition Prof. Lipman summarizes his bulletin with:

"1. Proper plowing and cultivating are essential factors in successful soil management. Reasons are given above.

"2. Deep plowing is a prime necessity in California soils. Eight to ten inches in depth is right for ordinary crops. Fourteen to 16 inches in preparing land for alfalfa. Details given above.

"3. The plow depth must be varied slightly every year to help prevent plow sole formation.

POINTERS ON FIG PRUNING

Writing in the Fig and Olive Journal, I. J. Condit says:

"The pruning of fig trees depends upon the variety and the method of harvesting the crop.

"Trees grown for fresh fig production, such as the Kadota, are headed low by heavy annual cutting back.

"Trees grown for dried fruit are headed at about 16 inches and from three to five main branches selected for the framework of the tree.

"Most fig trees bear two crops, the first crop on the old wood, the second or main crop on the new wood of the present season's growth.

"Young Calimyrna and Kadota trees have a tendency to produce long, upright branches without laterals. Heading back early in the growing season or during the winter induces branching and prevents the branches from becoming too heavy.

"Adriatic and Mission trees naturally produce laterals on the main branches. Cutting away low lying and interfering branches constitutes the principal pruning of these varieties.

"Low headed trees are as a rule most vigorous. Long exposed trunks are very subject to sunburn and should be avoided.

"Summer pruning seems to be advisable with Calimyrna trees early in the season to induce branching, and with other varieties simply to remove useless branches and suckers from the base.

"The pruning of bearing trees consists in thinning out old wood to encourage new growth, in cutting back long branches to induce laterals, and in removing branches which interfere with cultivation.

"Caprifig trees are pruned simply for shaping and for economical harvesting of the crop."

A man who deliberately walks into a buzz-saw is crazy, but a lot of them walk into matrimony in the same spirit.

Samantha says: "It's better to make one friend than a hundred remarks clever enough, and cutting enough, to go over the whole country.

Don't kick about your job. Somebody would be glad to have it.

Most Birds Are Beneficial

The sparrow is a beneficial bird, says the biological survey, and should not be regarded as a pest. The single exception to the department's endorsement is the pesky English sparrow of that species, "usually a nuisance and often injurious," says the department in a booklet, Farm Help from the Birds. "It must be remembered that the introduced English sparrow is but one member of the large family of sparrows and its habits are by no means characteristic of the native species."

They are essentially seed eaters, the sparrows, but they consume also a fair proportion of insects, and in general must be regarded as beneficial. Separating the sheep from the goats in the feathered kingdom of common knowledge to the farmer, the department places among the bad birds the jays, crows, ravens, and blackbirds, a corporal's guard compared with the army of good birds, of aid to the farmer, placed in the other classification. Even the bad denizens of the air have some good in them, and the damage they do the farmer is largely because of over-population in the feathered ranks. Of that class the department says:

"It would seem a good policy to accord them the same treatment long given the common crow. The crow is not specially persecuted, neither is it protected. About the best that can be said of birds of this family is that on the average they do about as much good as harm.

"Owls as a group have long been persecuted by man but never has persecution been more unjust," says the biological survey. More than 50 varieties feed on a great variety of rodents and have useful habits. In Washington, D. C., the survey recently determined what 675 barn owls had for dinner. Here is the menu, by variety and number of dishes consumed:

Meadow mice, 1,119; house mice, 452; house rats, 134; other small mammals, 3 per owl. And the service done man by the barn owl is typical of that performed by hawks and owls in general. An occasional chicken is consumed, but this loss is far outweighed by the destruction of harmful rodents.

Sudan Wins a Place

Ten years after its introduction to the United States from Khartum, Africa, Sudan grass was being successfully grown in nearly all parts of the United States. It does not serve well either as a money crop or a soil improver, hence it may never find a permanent place in regular crop rotations. It has, nevertheless, a very important place in the farmer's second line of defense as a catch crop which can be planted to give satisfactory returns when conditions have brought failure to other hay crops. This is the verdict pronounced by the United States department of agriculture in Farmer's Bulletin 1126 recently issued.

Sudan grass is replacing millet as the premier catch crop in many localities because of its ability to produce a fair yield and a high quality of hay under conditions of low rainfall, its rather short growing season and its ability to thrive on a wide range of soil types. Large yields of Sudan grass are obtained only on good soils but the grass fails completely only on cold, poorly drained land.

Sudan grass produces heavily. In California under irrigation it has made yields of 9.8 tons of field cured hay an acre when alfalfa produced but 8.3 tons under like conditions.

Although Sudan grass is best adapted by nature to use as a hay crop it is also used with great success as a soiling and pasture crop for summer pastures. Its use as a silage material is limited by the fact that it is easily made into hay and fed as such with very little waste and also because corn and sorghum both outyield it and are generally available throughout the region where Sudan grass is grown.

In the semi-arid districts the highest yields are obtained when the grass is sown in rows so as to allow of cultivation. The advantage in yield of the row over the drilled seedings is so small, however, that most farmers prefer to avoid the necessity of cultivation by drilling or broadcasting the seed. A common grain drill handles well cleaned Sudan grass seed without trouble and the hay from drilled seedings is finer stemmed and matures more evenly than row plantings.

The feeding value of Sudan grass is equal to timothy hay. In localities where soy beans or cowpeas do well these legumes may be grown in mixtures with the Sudan grass. Such a mixture produces a hay of higher feeding value than the grass alone because of the high protein content of the legumes.

Sudan grass hybridizes freely with the sorghums. It is necessary, therefore, if pure seed is produced to have the Sudan grass field at some distance from any sorghums, otherwise it will result in a mongrel crop the following year.

Foreign Crop Prospects

The preparation of the soil and the seeding of winter grains has continued to make rapid progress throughout the northern hemisphere. The abundant moisture has greatly facilitated fall plowing and the seeding of winter wheat and rye in Canada. Conditions have generally been favorable for seeding in the United States and early sown fields of wheat and rye in the Northern and Central states are up to a good stand and vigorous growth reported. Rain is needed in some districts of the far Western states to insure proper germination. The present prospects indicate that the acreage for the country, as a whole, will be up to the average.

Recent rains have greatly facilitated plowing in France and Germany, although more rain is needed to insure sufficient moisture for germination. The present prospect indicates that an average or slightly above average acreage of fall grains will be sown in all western Europe. The monsoon is reported to have continued active in most of India, and in the Punjab region the recent rains have greatly improved conditions. Crops are generally good and the present outlook indicates that a large acreage of wheat and other grain will be sown.

Abundant rainfall has recently occurred over the entire grain producing section of Argentina and will greatly benefit crop prospects.

The outlook for next season's crops is very promising in British South Africa because of ample rains well distributed over the country. If the present promising conditions continue the production may exceed the harvest of any recent years. Corn is looking exceptionally well. Wheat was sown under very favorable conditions and the area for the coming season is 839,000 acres compared with 823,000 acres in 1920-21.

Rain has been abundant throughout Australia and prospects continue good to excellent. The area sown with wheat for 1921-22 is approximately 9,445,000 acres compared with 9,082,000 acres in 1920-21, an increase of 4 per cent, but 2 per cent below the average of the previous 5 years.

Thrashing of this season's crop has been delayed in the prairie provinces of Canada by heavy rains and snow but damage to crops has been minimized by the cool dry weather which followed. Rainy weather has also interfered with thrashing in some sections of Great Britain, especially in Scotland. Weather conditions have been favorable for thrashing in most of western Europe, and recent returns

of the yield confirm earlier favorable estimates for winter cereals, which equal or exceed those of last year. The yield of spring sown grains is only fair and the quality variable, though occasional good yields are reported. The hot, dry weather up to mid-August has injured the corn crop in all of western and central Europe and a poor yield is reported.

The first cotton forecast for India (which covers 79 per cent of the total area but does not embrace late plantings as these had not yet commenced) states that the present condition of the crop is generally good.

The cotton crop in Egypt is generally backward because of an unfavorable growing season and damage from the pink bollworm. The average yield per acre will be below normal and the quality variable.

A special report from the Chinese Cotton Mill Owners' Association at Shanghai gives the area of cotton in that country in 1920 as 4,300,000 acres and in 1919 as 4,751,000 acres. The production in 1920 is estimated as equivalent to 1,868,000 American bales of 500 pounds gross weight.

The potato and root crops, including sugar beets of Western Europe, have been damaged by the long summer drouth and the yield in general is only fair as the recent rains came too late to be of any material benefit. The fruit crop in Great Britain is generally below normal. The yield of grapes in France, including Alsace-Lorraine, Hungary, and Italy, is up to the average and the quality god. The condition of the olive crop in Spain and France is very good, but the condition of the crop in Italy has deteriorated because of the great heat in August.

STRAWBERRY ROOT WEEVIL ERADICATION

T. D. Urbahns of the state department of agriculture reports present indications good for successful eradication of the strawberry root weevil in the Alameda County berry field in which it was discovered. This being the only known infestation in California, it is very important this pest be eradicated. It is one of the most destructive strawberry pests known in the United States.

The infested area was roughly broken up and exposed to the sun in August while the weevils were in the early larval stage. Every care was taken to destroy all the plants. Favorable weather conditions followed and the soil is now so dry and hard that there is no indication of either plant or weevil to be found. Two small areas of young berry plants at the edge of the center of infestation are being kept to act as a trap crop to attract any adults which might chance to make their appearance next spring. This area will in turn be destroyed next summer at the proper time to catch weevils which might appear.

LAWN GRUBS

Investigations conducted at the New Jersey experiment station with carbon disulphid have shown that the maximum dosage for ordinary lawn and golf green grasses lies somewhere between 1 and 5 ounces per square foot and considerably above the former, while the minimum dosage for the white grub is about 1 ounce. Temperature is shown to exert a decided influence on the minimum dosage for the white grub (1 ounce at 65 degrees Fahrenheit and less than 1 ounce being necessary at 85 degrees or above) and presumably also upon the maximum dosage for the plants. Effective work against the grub appears to require injections not much over 6 inches apart. The soil moisture must be medium (10 per cent) to wet (20 per cent) for good results in grub destruction. Wetting the surface of the soil in cases when the moisture is dry (5 per cent) to medium (10 per cent) seems to increase the effectiveness of the treatment. The charge should be placed several inches below the point where the grubs are working.

FLATTERING

A man's conceit is ne'er so pleased,
His egotism brimmin',
As when he is the object of
A row between two wimmen
—Tennyson J. Daft.

Where Weather strikes hardest—
The Roof!

The roof takes the brunt of all weather—rain, wind and hot sun. Keep your shingle roof in good condition—a neglected roof means the cost of a new roof soon.

OTHER QUALITY PRODUCTS

especially prepared for use on the farm.

Oronite Roof Paint

A high-quality protective coating for prepared roofing and metal roofs.

Mica Axle Grease

Gives a durable, smooth lubricating film under every pulling condition. Keeps the axle cool; no hot-boxes, no gumming. The MICA makes it better.

Eureka Harness Oil

Preserves the original strength and life of leather and keeps it soft and pliable. Keeps harness "new looking."

Standard Hand Separator Oil

Correct Lubrication for your Hand Separator, under the conditions of high speed and close fitting parts.

ORONITE SHINGLE OIL
Preserves Shingles

Deterioration of shingles is caused by the penetration of moisture and air into the fibre of the shingles, hastening disintegration and decay. The natural oils in the wood evaporate and cracking and warping result. Your shingles need constant protection against the elements—rain, wind and sun.

Use Oronite Shingle Oil on all shingles either on roofs or on side walls. It is a high-quality preservative for shingles. It penetrates the shingle fibre and fills the pores with a moisture-resisting preservative. It retards evaporation of natural oils in the wood and counteracts the effect of age and exposure.

Oronite Shingle Oil is easy to use. It can be mixed with colors. Ask our nearest agent for formulas. Oronite Shingle Oil will make your shingle roof last longer and give better service to you.

Queries

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Does Eat Young

We have found half of the bodies of one or two baby rabbits in the pen and we think it is possible the does have eaten them. Can you tell me what causes them to do this and what the remedy is, if any? We have put raw meat into their pens thinking that the flesh was what they were craving but they will not eat it.—Subscriber, Puente.

Many does are too fat when bred. They should be a little lean, then when bred and well fed they put it into the young and not into their own flesh. Feed roots, leaves, barks and weeds while carrying the young as well as grain and hay. They will then have sufficient of mineral salts for the production of their young and also as a tonic for themselves. At time of birth they often have unnatural appetites and a piece of fresh bacon is better than raw meat, but if they persist in their cannibalism after several times bred do away with them as it will be care and expense wasted to keep them.—W. D. W.

Cemetery Plants

Will you please write the names of a few trees, flowers, and shrubs that are good for cemetery planting? Would the pink oleander be all right? It is a red soil and they do not get any water through the summer.—Subscriber, Trowbridge.

Pines, cypress and cone bearing trees in general are usually planted in cemeteries, but there is no good reason why these are better than others; any trees are proper, whether evergreen or deciduous. Oleanders will grow well without summer watering. The trailing "myrtle" or periwinkle is much used on the graves and is difficult to kill by drouth. The blue plumbago is another equally hardy. Leptospermums, bottle brushes and any Australian shrubs will endure summer's heat without watering if given a good start in early winter. We do not know of any flowering plants that will endure so well as native Californians, of which our poppy is a good example. Dealers can supply you with a mixture of native flower seeds to sow now, and some of them will be sufficiently suited to soil and climate to yield flowers under the hard conditions you have named.

Care of Carnations

Will you please give me some information on the care of carnations, pruning, etc.? We live 2½ miles from Monterey Bay. — Subscriber, Watsonville.

You are in good location as regards sea air. A light sandy loam is the best soil. Cuttings may be taken now but are best for amateur work if taken in spring and put in boxes of pure washed sharp sand and kept well watered at all times. If allowed to wilt they may as well be abandoned, for none will root. Plant out when well rooted and cut off all flower spikes as they appear, until November, for carnations are a winter crop. It is best not to prune, except to get young and vigorous cuttings for propagation, and plants should never be kept beyond the third year. If well grown they should bear well for three years, but necessitated resort to pruning suggests it is time to root out all old plants and plant new stock.

Coleus and Strawberries

Can you tell me what ails my coleus? It is in sandy soil, inside, and kept moist. The leaves droop, though the plant grows rapidly and is large.

I intend moving in the spring and would like to know if I could put in strawberry slips this winter and transplant several months later.—Subscriber, Modesto.

The condition of the coleus leaves suggests the presence of red spider. Daily sprayings with water, several times each day, should soon free the plant of them.

Strawberry cuttings planted now should root well and move readily and safely in spring.

California Tree Seeds

Can you tell me how to plant the following tree seeds to obtain the best results: Monterey pine, sequoia gigantea, California redwood, red cedar, sugar gum eucalyptus?—Subscriber, Campo.

Any light sandy, sifted garden loam will do, but one-half inch such loam and one-half leaf mould would be far better. Cover seeds a half inch, Keep in partially shaded position or cover with lath frames or cheesecloth shades. Keep well and equably watered but be sure drainage is good. See that ants do not infest boxes; especially are the eucalyptus seeds in danger of being carried away. After seedlings are up keep in full light, yet shaded, and see that air circulates freely, yet keep out of the wind. Stagnant air will cause damping off. especially in soils containing leaf mould or other decaying vegetable matter.

Avocado Seed

Please tell me how and when to plant avocado seed. — Subscriber, Anaheim.

The when is just as soon as possible after you get the seed. They rapidly lose their germinating power. If possible plant same day you eat the flesh. Put in boxes, pots, cans or open garden, small end up, and cover but a half inch. Keep well watered at all times.

Legal Queries

Louis B. Stanton, attorney, 343 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 317 Central Ave., Los Angeles.

Joint Tenants

Is there any legal objection to having property deeded to mother and daughter as joint tenants with right of survivorship, in case the husband is still living?—Subscriber, Claremont.

Property can be deeded in such manner to any person, no matter what the relationship or if there be none.

Transporting School Children

When a school board refuses to furnish transportation for children living two miles from a school can they be compelled to pay parents of the children the fee which they are paying for transportation for their children to the same school? — Subscriber, Rialto.

The provision of the political code is to the effect that it is within the power and duty of trustees of common school districts and boards of education to provide for the transportation of pupils wherever in their judgment such transportation is advisable, provided that it shall not cost the district more than 15 cents per pupil transported per day. Certainly it would seem that the board of trustees cannot discriminate, and in case they do that proper proceedings in court could require them to equalize the transportation facilities. It might be well for you to first take the matter up with the county school superintendent.

Loan to Veteran

My son holds an honorable discharge from service in the Spanish-American war. Is he entitled to borrow money for equipment of his ranch? If so, how much? Will it make any difference if he now has a loan on the ranch?—Subscriber, San Jose.

The act providing for farm and home aid for veterans defines a veteran as any individual who has served on active duty in the army, navy, or marine corps of the United States in time of war, and has received an honorable discharge therefrom or who is released from active service on honorable conditions and who at the time of his enlistment, induction, and drafting was a bona fide resident of

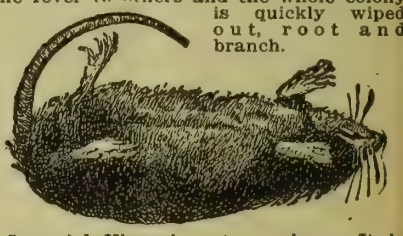
Easy to Kill Rats and Mice

Amazing Discovery Wipes Out Every One—Not a Poison

This remarkable discovery is Imperial Virus. It is a fluid, true Virus, in sealed bottles—thus insuring full strength and potency until used. It affects only Rodents, such as Rats, Mice, Gophers, etc. Spread upon bread, meat, or grain, this bait is greedily eaten and the Virus is extremely fatal. It sets up a burning fever and the pests die outside, hunting air and water. They also communicate the fever to others and the whole colony is quickly wiped out, root and branch.



Imperial Virus is not a poison. It is entirely harmless to humans, poultry, stock, pets, etc., and is therefore, the only safe method by which houses, farms, factories, warehouses, stores, etc., can be rid of these pests.

GET YOURS FREE

To quickly get wide distribution, the manufacturers of this amazing Virus are making a Special Offer of two big, full sized (double strength) $1.00 bottles for the price of one. Use one and sell the other to a neighbor, thus getting yours free. Special inducements for full or spare time effort if you wish to act as representative. As this offer may not appear again, you should write at once.

Send $1.00 today, (bill, money order, check, etc.) and you will receive the two $1.00 bottles, post paid. If more convenient, send no money; just your name and address to the Imperial Laboratories, Room 602, 2110 Grand Ave., Kansas City, Mo. You can pay the postman $1.00 and a few cents postage when the two bottles arrive. Imperial Virus is backed by an Iron-clad guarantee to do the work to your entire satisfaction, or your $1.00 will be refunded any time after 30 days without question or quibble.

SUDAN GRASS
1ST CLASS SEED FOR SALE
The Lewis Company
Lewis Building San Jose, Cal.

the state of California. It would, therefore, incude the veterans of all wars. The act establishes a board to supervise the loaning and purchase of farms and invests this board with authority to purchase for sale to a veteran land for agricultural purposes not exceeding the value of $7,500 or a home or home site not exceeding in value the sum of $5,000, provided, that no one is entitled to this right who has taken advantage of the California Veterans Welfare Act for educational opportunities, receiving a bonus or adjusted compensation or who by receiving any benefits under this act would thereby become the holder in value in case of the farm or homesite of the amount specified above. Other regulations are provided for the board to make and it would be necessary to ascertain from the board itself whether the facts as stated in the question would be such as to enable it to extend assistance in the matter of a loan to take up present indebtedness.

Title to Survivor

I own a farm, the title of which stands in the names of my wife and myself. What is the best way to arrange it so that when one dies all property will go to the survivor?—Subscriber, Puente.

Two methods are available. One, and the simplest and best way, is to file and record a joint homestead on the property. Under the other method property can be deeded to a third party who will then deed it back to the husband and wife as joint tenants with the right of survivorship.

Pipe Line Location

About a year ago my neighbor to the south had a pipe line put in. I have recently surveyed my boundary and find that the pipe line is three feet over my land. May the neighbor be required to move the pipe line or does it belong to me?—Subscriber, Baldwin Park.

Apparently there was uncertainty in the minds of both parties as to the exact position of the boundary line. In view of this uncertainty the neighbor placed his pipe line on what was thought to be his own property but which has since been determined to be yours. He would then be obliged to move the pipe line. It would be only in the case of absence of uncertainty that you would be entitled to retain the pipe line.

Road Closed

Through a large tract for the last 15 years two roads have been maintained by adjacent farmers. The owner of the tract has now closed one road, which renders it practically impossible to reach some of the ranches. The neighbors are all in favor of seeking to have these roads declared county roads. What is the mode of operation?—Subscriber, Valley Center.

It is quite probable that the roads are in fact public highways and by reason of having been used by the public for the past 15 years and improved by the public, the law would presume that they have been dedicated to public use and thus the land owner would be restrained from closing them. All such matters depend so much on history of the road itself that it is well nigh impossible to give an adequate answer. The law provides a means whereby condemnation proceedings may be instituted. These proceedings are commenced by the filing of a petition signed by at least ten freeholders who are to be accommodated by the road, two of whom must be residents within the road district wherein the road is situated and who are taxable therein for road purposes. This petition is addressed to the board of supervisors and seeks the alteration or laying out of the new road, setting forth the general route and the names of the persons over whose land the same is to run. The petition must be accompanied by a bond of the total amount of the cost of viewing the road, conditioned that the bondsmen will pay costs of such surveying in case such road is not granted. Three road viewers are then appointed, who must make their report to the supervisors, and upon receiving the report the board fixes date for hearing and upon hearing, hears the evidence by the parties interested and either grants or rejects the proposed road. If the road is approved it may proceed by way of condemnation proceedings to acquire a right-of-way for the road.

Delinquent Tax Sales

What is the method of buying land that is advertised for sale by delinquent taxes? Can a former owner repurchase it? Who gives a deed? How many years taxes must be delinquent before the land is sold?—Subscriber, Fallbrook.

Whenever the taxes are delinquent for five years the county tax collector deeds to the state the property upon which the taxes are delinquent. Thereafter, the state comptroller authorizes the tax collector to sell the property after publication of notice for three weeks in a newspaper published in the county wherein the property is located. The tax collector thereupon at the time stated sells the property by auction to the highest bidder for cash, but all bids must be at least the amount of taxes, costs, and penalties shown against the land. The state through the tax collector thereupon gives a deed to purchaser. After sale and execution of deed the former owner of the property has no right to re-purchase it, as his whole interest therein has been divested by the deed from the state. In case the proceedings in any way are declared illegal and the conveyance by the state thereby void, then the court may upon payment to the purchaser at the tax sale of all amounts paid out by him, as determined by the court, quiet the title to the property in the original owner.

Is Home Personal Property?

About a year ago I bought a house belonging to a man who leased the land. Can I take the house down and move it away?—Subscriber, Sisquoc.

It would depend entirely upon the terms of the understanding, but it would seem that the house is among the parties considered personal property and detachable from the premises. The terms of the lease would have to be consulted to determine whether or not this is true as against the owner of the land.

Pencil Signature

Is a signature by indelible pencil as legal as by pen on legal papers?—Subscriber, Tulare.

There is no provision of law requiring a signature or other writing to be in any particular manner. About the only question is whether the writing may be changed or altered in such a way as to cast suspicion on the verity of the writing. Signatures by indelible pencil are generally considered to be as safe as signatures by pen.

HUBAM CLOVER DOES WELL

A survey of the 12 or 15 test plots with Hubam clover laid out this past season indicates that this clover has done remarkably well where planted reasonably early. The best results were secured from the earliest planted, the largest growth having been made in a plot planted February 12. By July 15 this clover had reached a height of eight feet and was in full bloom. Considering the unusual amount of cool weather which occurred this spring it is evident that the new Hubam clover will make a very satisfactory growth for cover crop purposes in from three to four months. It would therefore seem that this clover is especially well adapted to green manuring purposes for truck crop growers. It also seems likely that it furnishes the best crop for an early spring cover crop in citrus orchards in the interior districts for use as a means of prevention of June drop. It is expected that seed will be available in much larger quantity for next season and at a much lower price.

CALIFORNIA'S LOFTY MOUNTAINS

At least 60 mountains in California rise more than 13,000 feet above sea level, but they stand amid a wealth of mountain scenery so rich and varied that they are not considered sufficiently noteworthy to be named, according to the United States geological survey, department of the interior. Yet if any one of these unnamed mountain peaks were in the eastern part of the United States it would be visited annually by millions of people. But California has 70 additional mountain peaks more than 13,000 feet high that have been named, or 130 in all, as well as a dozen that rise above 14,000 feet.

UTILITY VS. BEAUTY, IN VERSE

A Fable

The hen remarked to the muley cow,
As she cackled her daily lay,
(That is, the hen cackled) It's funny how
I'm good for an egg a day.
I'm a fool to do it, for what do I get?
My food and my lodging, My!
But the poodle gets that—he's the household pet,
And he never has laid a single egg yet—
Not even when eggs are high."

The muley cow remarked to the hen,
As she masticated her cud,
(That is, the cow did) "Well, what then?
You quit, and your name is mud.
I'm good for eight gallons of milk each day,
And I'm given my stable and grub;
But the parrot gets that much, anyway—
All she can gobble—and what does she pay?
Not a dribble of milk, the dub!

But the hired man remarked to the pair,
"You get all that's coming to you,
The poodle does tricks, an' the parrot kin swear,
Which is better th'n you kin do.
You're necessary, but what's the use
O' bewailin' your daily part?
You're bourgeois—workin's your only excuse;
You can't do nothin' but jest produce—
What them fellers does is Art!"
—"Capital," Calcutta, India.

TWO MAGIC POWDERS

MRS. BALLARD stood in the back doorway, drawing in, with slow, measured breaths, the fresh spring air. Somewhere, a robin chirped; two kittens bounded across the yard; and from the garden, a stone's throw away, a rollicking song, in the fresh, clear notes of a boy, rang blithely.

Mrs. Ballard wiped the perspiration from her face with a damp, parboiled hand. "It's no wonder," she sighed, "that young things feel frisky. Time was, I remember, that I used to whenever spring came along."

A neighbor clicked the gate. Mrs. Ballard greeted her. "Good morning, Mrs. Winn. Come right in."

She led the way into the kitchen where a basket of snowy clothes was waiting to be put on the line. "It's not often," she excused herself, "that I dally over the wash. But I've the most aggravating headache this morning—the kind that just keeps a-nagging like."

Her caller nodded. "I don't wonder," she remarked shortly, "that you have headache. There isn't a girl in town has so many frills as Joyanna. And I've never seen her even so much as help you at the rinse."

The mother sighed. "She's young," she apologized. "I want her to have her youth. I never had any." She was piling the breakfast dishes into the washing pan. "Mother died when I was only nine and by the time I was twelve I was keeping house for father and the two boys. There wasn't much time to think about youth in those days. But I always said if so be's I had a girl of my own she should have a few years to enjoy just being young.

Mrs. Winn moved a little impatiently. "That's all right, as far as it goes," she acknowledged. "But what's the matter with you getting a few years to enjoy just being a woman? Seems to me, just because a body didn't have a chance to be young is no reason why they shouldn't get a chance to live. You need your turn."

Up the walk came a vision of girlish beauty. Joyanna Ballard entered the warm kitchen. "Mercy!" she cried. "You're stifling in here! Why in the world don't you go out and visit on the porch, mother?"

"Your mother's work happens to be inside, my girl," Mrs. Winn answered. "And I didn't come to visit. I came for a dozen eggs. We were having a chat first. Your ma's plumb beat out with the spring weather."

Joyanna turned anxious eyes toward the sink. "Didn't you feel well, mother?" she asked. "I just asked Sue and Ned Thom to come for tea tonight. Had I better run over and say you're ill?" If an added bit of rose touched the velvet of her cheeks at the mention of Ned Thom's name, only her mother noted it.

"No, no, child." Mrs. Ballard spoke laconically. "I dare say I'll be all right by noon. What'll you want for supper?"

Moving backward, Joyanna stood framed in the open doorway. The morning breeze tossed bright strands of coppery gold about her cheeks and ears. Her white morning dress, open at the neck, showed a throat as white and smooth as ivory. "I wonder," she inquired, wrinkling her pretty brow, "if it's too late for hot raised rolls? And Ned does love angel cake! And couldn't we have broilers?" Her voice was pleading. "I forgot all about it being washing day," she confessed. "If it is going to be too hard, I'll run right over and say you're sick."

Abruptly Mrs. Winn rose. "Did you ever have a headache, Anna?" she inquired crisply.

The girl in the doorway flushed. "Why, yes," she replied shortly. "I suppose everyone has."

"Then," declared the grim faced woman, "you know how it feels, for though some's worse than others, a headache's a headache, same's a human's a human and a heart's a heart. Can I get a dozen eggs, Mrs. Ballard?"

A moment later she stalked majestically down the walk. As she passed Joyanna who was bending over a flowering shrub, she remarked, "You'll be mighty lonesome, I'm thinking, if you wake up some day and find your mother gone."

Joyanna straightened. "Gone!" she repeated. "Where on earth would she go?"

"There comes a time—" Mrs. Winn's words were as clear and cold as an icicle glistening in the sun—"when we go."

Mechanically Joyanna brushed a bit of dust from the front of her morning gown. When she spoke her voice seemed strange and harsh. "I do wish," said she fretfully, "Winston would stop that whistling." But clear and joyous and loud, the whistling went on.

Mrs. Winn regarded her curiously. Then she turned. "I saw her go into Dr. Wattles' office yesterday," she said and snapped the gate with an aggressive click.

The minutes passed and still Joyanna stood as if rooted to the spot. A vague wonder flitted through her mind as to whether she could ever again bear to look at the bush beside her. The twittering of the birds hurt her. The gay tune from the field seemed like thunder in her ears. Then she flew into the house.

As she stepped inside the door a cheery "Good morning!" made her turn. Dr. Wattles' car stood by the gate. Dr. Wattles, grave, keen of eye, was looking her up and down.

Closing the door behind her, she went out to him.

"I brought two powders," he announced. "I thought I'd see you either in the yard or somewhere along the way."

"For mother?" The strange sharpness was still in her voice.

"No." He ran one finger thoughtfully about the edge of the steering wheel. "For yourself." His eyes met hers. "Your mother was in for a tonic yesterday. A mere tonic, it appeared to me, wouldn't fill the bill. So I've brought along these two powders for you to manage. Mix 'em thoroughly and take at once. If they act right, I guess she'll come out all right in time." With a whir, he was off down the road.

Joyanna gazed at the neatly folded powders in her palm. Then she retraced her steps to the house. Not for nothing had she gone through Wellesley with the highest honors of her class. In her quick brain lurked a vague premonition of what she was to find.

In her cool, dainty room she slowly unfolded one of the "powders," smoothed it gently and through a blurring mist read, "Not alone our lives, but the lives of those we love, are in a great measure what we make them. The sun and the sound of the birds and the glory of the spring are for all alike. Share ye one another's burdens and so fulfill the law of Christ."

Then she opened the other: "A little honest love; a little help; a little cheer. To be given at intervals every day."

Like a panorama, the years since her father's death spread before her. How full of brightness and sweetness and love they had been! In corre-

sponding proportion, how full of dullness and work and thanklessness they had been for her mother! With cutting clearness she saw the cheap calico dresses, varied by one dull, rusty black, hanging opposite her own dainty whites and pinks and blues.

Crossing to the window she drew a long, tense breath and raised a white but earnest young face to the sky. "O God!" she whispered. "I thought my happiness was all that mattered! Teach me another way!"

A second later she was fastening a plain gingham in place of the dainty white. Then she ran briskly downstairs.

"Mother," she cried, crossing to the sink where Mrs. Ballard was still at the dishes, "you go straight upstairs and lie down. I'll do these!"

"No, no, child," her mother demurred. "It's too hot. You'll get all fagged out for tonight."

Like the sting of a whip, the thought of Ned Thom stung her. His student life, so far removed from all household care — he would never understand!

"They're not coming tonight." Her voice was soft and sweet. "I guess they'd just as soon go over to Lora Dale's lawn party anyhow. I'm going to 'phone them that you and I are going shopping, if your head gets fit, all afternoon. I've been looking over my things. It's scandalous to have so much half worn stuff on hand and I'm not going to have a single new dress this year. We're going to get a few things for you, for a change."

At sight of the wistful, eager light that flooded the tired face something new and clean and sweet swept through the soul of the girl. It crowned her, for the moment, with a touch of something almost beyond earth. "Mother," she said slowly, "I never knew how really much I loved you before." Then, with a gentle push she moved her mother toward the stairs. "Do get to bed! I'll be up in a jiffy to bathe your head, same's you do mine when it aches."

She hurried to the telephone. "I'll have to cancel that invitation," she said, a moment later. "Mother has a headache and she'd never let me get supper for you and Sue, and I'm not going to let her. And—" just a moment she hesitated, "—I'm not going to ask you again, either, until I've learned to get up a meal by myself. I'm afraid mother's been doing too much. . . . What's that? . . . No." Sweet and clear, her voice carried over the wire; sweet and clear, the light still shone in her eyes. "You'll have to count me out. I can't go, Ned. I'm through playing. I think I'm just starting to —live. I want to get mother off to Aunt Nell for a rest and we'll be snowed under with sewing."

The April sun streamed in and touched the tawny gold of her hair. Her face was hidden in her folded arms; and in her heart Ned Thom's words rang, like chimes of silver bells— "Joy Ballard!" The words seemed to the listening girl a tender caress. "I've often wondered if the heart was quite as sweet as the name. Now I know! I'll be 'round there in about 15 minutes to say three words I was just a little—afraid to say—before."

From the field the sound of a merry tune wafted through the air. "Dear old Win!" she smiled. 'I hope he never forgets how to whistle! It sounds so—glad;"—L. D. Stearns in Farmer's Wife.

HINTS FROM HOUSEKEEPERS

Sweet Pickled Melon Rind

8 pounds watermelon rind, 4 pounds sugar, 1½ pints vinegar, 1 cup mixed spices (in bag), 1 cup clear ginger tea. Prepare melon rind by removing all the green rind and inner ripe portion, leaving only white. Boil until clear in a strong ginger tea. Skim out and let tea settle and use the clear tea (1 cup) in the syrup. Have the syrup boiling and add rind and boil for about half an hour.—Mrs. Wm. P. Russell, Prado.

Vegetable Soup for Canning

6 onions, 6 carrots, 2 turnips, ¼ small cabbage, 2 or 3 sweet peppers, both red and green, seeds removed; 1 smarty pepper, seeds removed; 6 stalks celery, 1 peck tomatoes.

Seasoning and Cooking — Wash, peel and run through chopper all but tomatoes and put on to cook with enough water to cover. Cut up the tomatoes unpeeled and put on to cook in another kettle until soft, with one quart of water. Rub all possible through sieve, add to vegetables together with a bunch of parsley, one bay leaf (to be removed) and six cloves. Cook till all are tender, about half an hour or longer. Just before canning add salt, pepper and sugar to taste. Can boiling hot by open kettle method. It is better to add half of smarty pepper first and taste.—Mrs. Reasoner, Winters.

Cake Fillings

Dried Apricot Filling — ½ pound dried apricots, wash, cook till soft and press through a sieve. Add 1 cup sugar, cook a little more, and then let it cool, then add chopped walnuts. Spread between layer, put whipped cream and half walnuts on top of cake.

Coconut Cream Filling — 3 level tablespoons flour, 1 cup cold water. Mix thoroughly and cook in double boiler till thick, stir constantly then let it cool. While it is cooling cream together 2 tablespoons butter and 1 cup confectioner's sugar. Mix and beat thoroughly, flavor with vanilla, add coconut or a few walnuts.

Lemon Apple Filling — Peel and grate 2 good sized apples, grate the peeling of 1 lemon and take the juice of 2, add 1 cup sugar, cook all together in double boiler. — Mrs. H. Pfeffer, Los Gatos.

HOUSEHOLD QUERIES

To Serve Lobster

I have seen so many recipes in the paper that are helpful and would like to ask if you can tell me how to serve craw-fish or lobsters. Would be glad to hear of any way. Subscriber, Long Beach.

Broiled with Bacon—Lobster is good just about any way it's served, according to our ideas. Our favorite, perhaps, is the simplest. Pull meat loose from portion to which legs are attached, split lengthwise, leaving in shell. Put in pan under broiler, laying strip of bacon over each half. As soon as bacon is broiled the lobster is heated through and is ready to serve, the bacon grease running into the shell and through the meat giving all seasoning necessary. Half of the ordinary small sized lobster makes one individual serving. Serve with slices of lemon.

We assume in these recipes that the boiled lobsters are used as practically none of the green lobsters reach the housewife.

Creamed. — Make ordinary cream sauce, melting 2 tablespoons butter, blending in 1 to 2 tablespoons flour as one likes, adding boiling water and milk to make desired consistency. Add lobster, cut in approximately half inch cubes. Season with salt and black pepper, let cook a half minute or so and serve on hot toast. Add Worcestershire sauce, walnut catsup, tomato catsup or any like sauce fancied.

Salad. — Cut in small cubes — shredded lobster always is tough, it should be cut in short pieces across the grain—add cut celery, cabbage heart, onion if liked, blend with mayonnaise and serve on lettuce.

Quince Honey

Will some one please send recipes for quince honey?—Subscriber, Ceres.

SWEET PICKLES

I am sending good sweet pickle recipe. This has been tried and proved excellent. Soak cucumbers in brine strong enough to hold up an egg, at least three weeks. Take from brine, split, sprinkle with alum and cover with boiling water until salt is soaked out. Make a syrup of vinegar and spices, 1 quart vinegar, 3 pounds sugar, whole cloves, cinnamon and other spices. Let syrup come to a boil, put in pickles and boil till tender. Pack pickles into jars. Boil syrup till thick and pour over them. These are better to stand awhile before using.—M. Payne, Bakersfield.

Soak four to five inch long cucumbers two weeks in brine strong enough to hold up an egg. Then slice

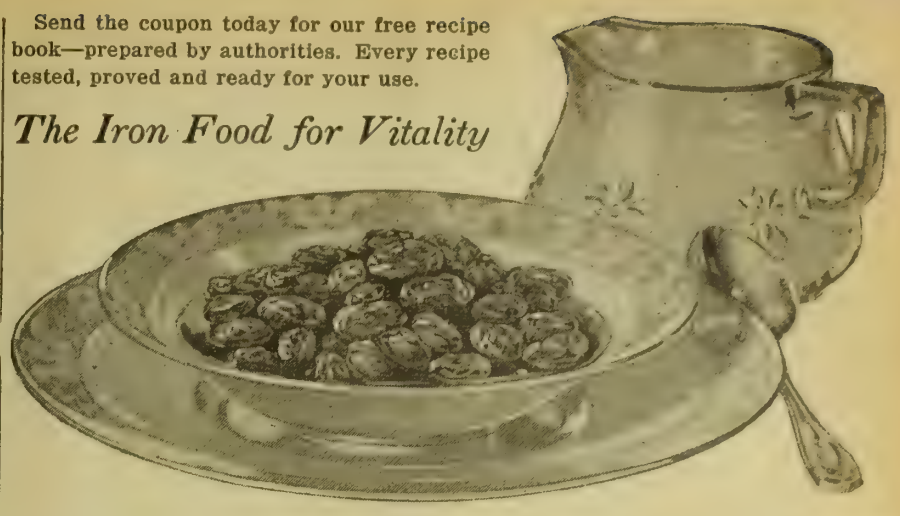
The Iron Food for Vitality



Six Delicious Ways

To Serve Stewed Raisins

—an economical dish to start the day's work.

STEWED raisins are a *luscious fruit* rich in *iron*—a most healthful regulator for entire families.

Try these ways to serve them. See which your men folks like best.

Serve plain with cream.

Try them with any oatmeal, simply mixing them with the cereal.

Always keep a box of raisins in the house. Use them to make any plain food tempting—for an economical dessert, a sauce for baked apples, or a flavor for ice cream. Raisins are delicious, healthful and economical—use them often.

—"be like the iron men of yesterday; eat raisins, the iron food for vitality."

Iron and Energy

Raisins are rich in food-iron — the *natural,* assimilable kind. You need but a small bit of iron daily—yet that need is *vital.* Raisins in the diet daily will help to *insure* it.

Food-iron makes red corpuscles in the blood and brings vim and energy to men. Helps them to work better.

Then raisins furnish *rare* nutrition—1560 calories of energizing nutriment per pound. More of *this* type of nourishment than eggs, milk, meat, or fish. Raisins are mildly laxative, also—good for clear complexion and clear brain.

So no other breakfast dish is better than stewed raisins, if you want to serve foods that are both good and good *for* you.

Raisins are cheaper by 30% than formerly—see that you get plenty in your foods.

Try them now—for ten days as a test. See the results. Your entire family will enjoy this luscious food. *Our free book tells how to stew raisins.*

SUN-MAID RAISINS

Sun-Maid Raisins are packed in a great, modern, glass-walled sanitary plant in sunny San Joaquin Valley—they're wholesome, sweet and clean.

cucumbers, soak in water until no salt, or very little, remains, changing often. (Small cucumbers may be used if preferred). Soak again in alum water, two tablespoons powdered alum to enough water to cover two gallons of pickles, 24 hours. Drain all water off, wash and boil half hour in strong ginger water (about ten cents worth). Rinse and drain well, put a plate with weight on and let stand several hours. Then wipe dry, place in stone jar, make syrup of 1 quart vinegar, 1 pint water, 3 pounds sugar, add mixed spices. Boil syrup and pour over cucumbers. Repeat until they look clear, usually three or four times.—Mrs. H. A. Pierce.

One of your subscribers from Elk Grove asks for a recipe for making sweet pickles such as are sold in the stores. The following will make quantity sufficient for an average family for the whole season:

Wash 75 small cucumbers, cut into quarters lengthwise. Scald and peel ½ quart small button onions. Wash ½ cauliflower, 1½ pints green beans and rind of ¼ medium size watermelon after peeling. Break cauliflower into small pieces, cut melon rind in short strips, make brine of 1½ cups salt to 2 quarts cold water, put vegetables in crock and pour brine over them, weight down with a plate to keep under brine, let stand two days, remove from brine, wash in cold water, add ⅛ pound grated horseradish root and ½ teaspoon celery seed. Pour back into crock and add a hot vinegar made as follows: Tie in a bag the following spices. ½ teaspoon white mustard seed, ½ tablespoon stick cinnamon broken into pieces, ½ tablespoon whole cloves, ¼ tablespoon each pepper corns, allspice and whole mace. Add 1 quart vinegar and ½ cup sugar (more sugar if you like), ½ ounce alum. Boil ten minutes, then skim and add 1 quart boiling water and pour immediately over vegetables. In about four weeks these will be ready for use. They are delicious.

No. 2.—One peck small cucumbers, wash well, make brine of 1 gallon water, 1 cup salt. When boiling hot pour over cucumbers. Cover closely and let stand 24 hours. Pour off brine, wipe pickles and crowd into wide mouthed jars, and for each quart pour over the following boiling hot: ¾ quart vinegar, 1 tablespoon sugar and 2 teaspoons mixed spices. Seal as soon as the liquid has been added. These are crisp and very good.—Mrs. D. W. Wilt, Fallbrook.

SIMPLE HOME MIXTURE FOR CURING MEAT

Kansas City Chemist Gives Simple Recipe for Curing Meat—Easily Prepared at Home

Anyone, by using this easy method, may now have the finest home cured meat for their own use or for sale.

It is simply necessary to mix 27 pounds of salt with a bottle of Wright's Ham Pickle—a scientifically prepared product containing all necessary ingredients except salt. A bottle cures a barrel of meat and cuts out all fuss, bother and uncertainty. The meat may then be easily and quickly smoked by simply painting it with Wright's Condensed Smoke, which gives a wonderfully delicious flavor and prevents loss from shrinkage and insects. You can get these products from your dealer.

Simply send your name to E. H. Wright Co., 841-A Broadway, Kansas City, Mo., for valuable illustrated book on expert methods of curing meat. Also learn how you can get a complete, best-grade butchering set at lowest factory cost.

Save 1-2 on Fuel

CHEAPEST HEAT YOU CAN BUY

The Sievert Oil Burner burns either distillate or kerosene oil in cook stoves, heaters, furnaces, pasteurizers, boilers, prune dippers, dairy sterilizers, etc. Absolutely safe, odorless, very convenient and low priced. MAKES HEAT AT HALF WHAT WOOD AND COAL COSTS. Install it yourself. Write for circular and prices on different sizes. Address Sievert Oil Burner Co., 710 North Main St., Los Angeles.

Save Your Roof
15c. a Gallon

Asphaltoid
ROOFING PAINT

Direct from producer to consumer permits this low price for our natural asphaltized roofing paint—the finest preservative and roofing paint under sun. Equally good for shingle, paper or metal roofs. Prolongs the life of warped shingle, rusted iron and detoriated paper roofs. Why pay more for an acid-treated asphalt that eats your roof? Mail orders, barrel lots, promptly shipped. Write for sample.

FAVORITE FROSTINGS

Orange Frosting

I am sending my favorite recipe for cake frosting for the benefit of the Artois subscriber as well as others who may like it:

1½ cups powdered sugar, 2 tablespoons hot milk, ½ teaspoon butter, ½ teaspoon vanilla. Add butter to hot milk and sufficient sugar to make right consistency to spread. Add flavoring. There are endless ways of varying this recipe. Different flavorings such as mapleine, banana, etc., may be used. An excellent orange frosting may be made by using 1 tablespoon milk, 1 teaspoon butter, 1 cup powdered sugar, ½ teaspoon orange extract, or orange juice to taste, also grated orange rind as liked.—Mrs. Harold K. Lee, Garden Grove.

Chocolate Frosting

In your issue for October 29 "Subscriber, Artois," asks for cake frostings, not too rich. I am sending our favorite recipe:

1 heaping tablespoon chocolate, 1 heaping tablespoon butter, 3 tablespoons hot coffee (liquid). Stir till well blended and add powdered sugar till the proper consistency for spreading. Add pineapple flavoring.—Mrs. F. N. Oakes, Paso Robles.

Caramel Frosting

1½ cups brown sugar, 1 cup milk, 1 tablespoon (level) butter, 1 teaspoon vanilla. Boil until it makes soft ball in cold water. Remove from stove and stir till thick. Add vanilla last.

Simple Frosting

1 tablespoon butter, 6 tablespoons boiling water. Stir till butter is melted, and stir in powdered sugar till stiff enough to spread. Use any desired flavor. Nice with grated rind and juice of orange.

Cake Filling

½ pound dates or figs, 2 tablespoons sugar, 3 tablespoons boiling water, 1 tablespoon lemon juice. Boil until thick enough to spread.—Mrs. W. P. Russell, Prado.

Marshmallow Icing

1 cup granulated sugar, 1 dozen marshmallows, white of one egg. Boil sugar and ½ cup water until it spins thread, pour over beaten white of egg, add marshmallows and beat until cool enough to spread.

Golden Icing

Boil 2 cups sugar with 1 cup water until it strings or threads. Pour over well beaten yolks of 4 eggs. Beat until smooth and thick. Add 1½ teaspoons orange extract and pinch of salt. Spread rapidly on cake. (Very pretty on white cake, using whites in cake and yolks in the icing.)

Boiled Icing

1 cup sugar, ½ cup water, 1 egg white, flavoring (teaspoon), pinch cream of tartar. Boil sugar and water until it spins a thread when dropped from spoon. Add cream of tartar. Do not stir after it begins to boil. Remove from fire and pour slowly over stiffly beaten egg white, at the same time stirring briskly. Add flavoring, stir until it thickens, spread on cake. This is used as foundation for a number of frostings. Add unsweetened grated chocolate, shredded coconut or chopped walnuts, or add fruit coloring for variation.

Uncooked Icing

1 cup powdered sugar, enough evaporated milk to make it the proper consistency to spread, with butter the size of walnut. Add any flavoring.—Mrs. C. A. Thomas, Morgan Hill.

White Frosting (Large Cake)

2 cups granulated sugar, ½ cup white corn syrup, ¼ cup hot water, whites of 2 eggs, ¼ teaspoon lemon extract, ¼ teaspoon vanilla extract. Put sugar, syrup and water in pan, heat slowly and stir until sugar is melted. Cook until it will form a very firm ball when dropped in cold water. Pour very slowly over egg whites beaten to a stiff froth, flavor and beat until it will hold its shape when dropped from spoon. Use at once.—Yorba Linda Subscriber.

Soft Frosting

Stir together one level teaspoon butter, ¼ cup milk and 1 cup sugar until it boils, then boil without stirring 5 minutes, remove from fire, beat rapidly, add flavor and before it is very stiff pour it over the cake and spread with a knife.—Mrs. J. F. Browning, Highland.

Uncooked Frosting

2 cups powdered sugar, 4 tablespoons cocoa. Mix well together, then blend with 4 tablespoons melted butter and 4 tablespoons either hot coffee or water, flavor with vanilla. Leave out coffee and use either water or milk for white frosting.

Cooked Frosting

1½ cups light brown sugar, ½ cup granulated sugar. Cook until it threads, pour over beaten whites of 2 eggs. Beat awhile, then put in double boiler and cook till grainy. Remove from fire, beat again. Nuts may be added.—Mrs. O. H. Piper, Ventura.

Boiled Frosting With Gelatine

1 tablespoon gelatine dissolved in 3 tablespoons cold water, ½ teaspoon vanilla. Boil 1 cup sugar and ¼ cup hot water until it threads and add gelatine mixture. Beat whites of 2 eggs very stiff. Pour mixture over eggs. Now beat all until stiff and dry. This is mellow and delicious to the taste.

Boil..d Fruit Frosting

Boil 1 cup sugar and 2 tablespoons hot water until it threads. Have ready whites of 2 eggs beaten stiff (with trifle grated orange peel in it or 1 tablespoon raspberry or strawberry jam), then pour syrup over beaten whites and beat until smooth.—Mrs. D. W. Wilt, Fallbrook.

Boiled Frosting

As I have gotten some very valuable recipes from the household department of the Cultivator, I am sending herewith for the approval of the subscriber from Artois two favorite recipes for cake frosting:

Boiled Frosting—Boil 2 cups sugar with ½ cup boiling water until it threads, then pour slowly over the stiffly beaten whites of two eggs, which should be beaten in a saucepan, and beat until nearly stiff enough to spread, then place saucepan in larger pan containing small quantity boiling water, place on range and cook, stirring constantly, scraping from bottom and sides of pan until mixture becomes granular around sides of pan. Remove from pan of hot water and beat until mixture will hold its shape,

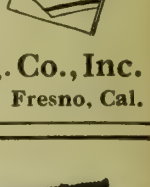
Oil Light Beats Electric or Gas
Burns 94% Air

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, V. N. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

Save ½ On Rugs

Your old, discarded carpet, rugs, and clothing has a high value. Send it to us. We reclaim the wool, then weave a new beautiful ART FLUFF RUG from it. A rug that for wear and appearance rivals the highest priced Wiltons and Axminsters, but only costs a fraction of their price.



Beautifully illustrated catalog tells all about our offer.

Write for it today.

PATTERN DEPARTMENT

California Cultivator Los Angeles

then add ½ teaspoon vanilla. Spread on cake with knife.

Orange Frosting

To the juice of half a medium sized orange add powdered sugar until stiff enough to spread. This is enough for a small or medium sized cake; for a larger cake use juice of whole orange. This is a delicious frosting, quickly made and does not dry out.—Mrs. E. D. M.

Boiled Frosting

1 cup granulated sugar, 1 white of egg (unbeaten), ½ teaspoon baking powder, 3 tablespoons boiling water. Place sugar and boiling water in double boiler (in boiling water), add unbeaten egg white and baking powder and beat with Dover egg beater until thick like marshmallows. Add ¼ teaspoon vanilla, remove from fire and keep beating until cool enough to spread. This is a splendid recipe, as it is so dependable and cuts so nicely. —Mrs. H. A. Price, Corona.

Uncooked Frosting

I have been reading with interest your household department in the California Cultivator and wish to contribute a recipe for cake frosting which was requested in the last number of the ppaer.

For a three layer cake take two cups powdered sugar, add tablespoon butter, or less will do if not wanted so rich. Heat small amount of milk or cream if wanted to be very extra and add to butter and sugar after they have been mixed as well as possible. The warm milk will make it stir smooth but be careful not to use too much as it wants to be quite firm. Flavor with 1 drop or 2 lemon extract and if wanted color pink with fruit color or brown with chocolate. This is very easily made and we like it the best of any.—Mrs. A. L. Curtice, Ceres.

WATER SUPPLY SYSTEMS

Every farm home should have a water system which will furnish an ample supply of good water for cooking and washing purposes. Carrying water for household purposes by the "water pail route" is hard, tiresome labor.

Running water on the farm is not a luxury which may be had only by those who have means, but some type of water system is in the reach of all. In considering any water system one should ask himself the following questions:

Is it simple and dependable?

Is it safe and sanitary?

Is it reasonably low in cost and upkeep expense?

A TERRIBLLE ARGUMENT

"Pompey," said an old-time darky leaning against his hoe-handle, "me an' old marster hab one pow'ful 'spute dis mawnin'—we sho' does!"

"Go 'long Mose! What you an' ole marster 'spute so pow'ful about?"

"Ole marster he come along hyer whah I wuz hoein' cotton, an' he 'low sezzee dat millions grows bes' in sandy ground," and I, low so too, an' we des 'spute an' 'spute aout it fo' mos' half a houah!"

A SURE REMINDER

Perhaps the most original suggestion for a "reminder" was that of a little boy whose grandmother had forgotten his birthday present the year before. She wished to know what she could do in order that she should not forget it again.

"You might put your teeth in upside down," said the boy.—Boston Transcript.

WITH THE EVIDENCE

"The evidence seems to show," said the detective, "that the thief wore rubbers and walked backward."

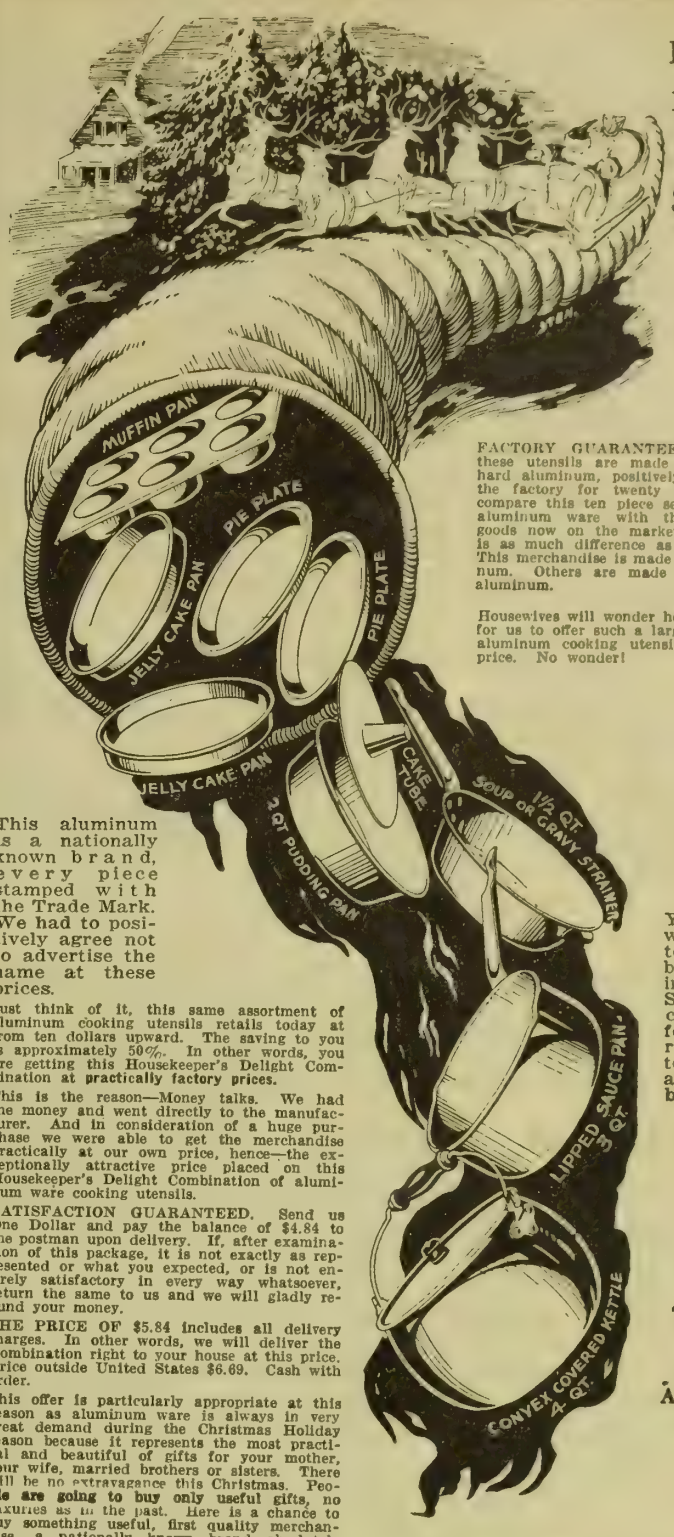
"Then we must look out for a man with receding gums," remarked the wag of the force."—Boston Transcript.

HE KNEW

Teacher—Johnny, I suppose you know what a caterpillar is?

Johnny—Yes'm; it's an upholstered worm.

Wonderful Xmas Offer of Aluminum Ware



LOOK!
10 Pieces
Only
$5.84

FACTORY GUARANTEE — Everyone of these utensils are made of pure, heavy hard aluminum, positively guaranteed by the factory for twenty years. Do not compare this ten piece set of high grade aluminum ware with the light weight goods now on the market. Really there is as much difference as day and night. This merchandise is made of heavy aluminum. Others are made of light weight aluminum.

Housewives will wonder how it is possible for us to offer such a large assortment of aluminum cooking utensils at so low a price. No wonder!

This aluminum is a nationally known brand, every piece stamped with the Trade Mark. We had to positively agree not to advertise the name at these prices.

Just think of it, this same assortment of aluminum cooking utensils retails today at from ten dollars upward. The saving to you is approximately 50%. In other words, you are getting this Housekeeper's Delight Combination at **practically factory prices.**

This is the reason—Money talks. We had the money and went directly to the manufacturer. And in consideration of a huge purchase we were able to get the merchandise practically at our own price, hence—the exceptionally attractive price placed on this Housekeeper's Delight Combination of aluminum ware cooking utensils.

SATISFACTION GUARANTEED. Send us One Dollar and pay the balance of $4.84 to the postman upon delivery. If, after examination of this package, it is not exactly as represented or what you expected, or is not entirely satisfactory in every way whatsoever, return the same to us and we will gladly refund your money.

THE PRICE OF $5.84 includes all delivery charges. In other words, we will deliver the Combination right to your house at this price. Price outside United States $6.69. Cash with order.

This offer is particularly appropriate at this season as aluminum ware is always in very great demand during the Christmas Holiday season because it represents the most practical and beautiful of gifts for your mother, your wife, married brothers or sisters. There will be no extravagance this Christmas. Peo**ple are going to buy only useful gifts,** no luxuries as in the past. Here is a chance to buy something useful, first quality merchandise, a nationally known brand absolutely guaranteed by the factory and at a big saving. We have explained why it was possible to quote such a low price.

Although we have bought thousands upon thousands of these Housekeeper's Delight Combinations of aluminum ware cooking utensils, the price at which we are offering these is bound to bring a big rush. In fact, it is not expected that we will have enough to go around and we, therefore, reserve the right to reject orders should your order come in too late.

You may write direct to the Humboldt Savings Bank, San Francisco, California, for references as to the character of our business.

The Price of $5.84 Includes All Delivery Charges

ORDER TODAY—RIGHT NOW

Pork Making in California

By E. H. Hughes, Assistant Professor Swine Husbandry, College of Agriculture

With finishing hogs selling at present prices and when barley and other feeds can be had at a reasonable figure hog feeding is an attractive business. During the past few weeks a great many men have been looking for feeder hogs in California. This has been true of the southern part of the state, San Joaquin valley and Sacramento valley and other sections where there are large quantities of barley and other feeds. Many hogs are to be found in the stubble fields and others are being finished in the feed lots. Considering California feeds at present prices and the fact that we can in this state produce fall and spring litters, it would seem that hogmen could produce market hogs cheaper than they can be produced in the corn belt, where most swine men produce only one litter a year or at least not more than three litters in two years.

With our alfalfa forage and other green winter feeds the cost of producing a 200-pound hog in this state does not exceed that of any other state. It is true that barley is slightly less valuable as a swine feed than is Indian corn. The results of various feeding trials indicate that Indian corn is worth about 10 per cent more than barley as a fattening feed. We have, however, as cheap nitrogenous concentrates in California as there are in any other section. Such feeds as tankage, fish meal and cocoanut meal can be purchased at a reasonable figure. In addition, some of our swine men are beginning to use rice bran which is at the present time a comparatively cheap feed. The results of feeding trials conducted by experiment stations in various parts of the United States would lead one to expect that 100 pounds of gain could be expected from 400 pounds to 500 pounds of grain when fed to pigs weighing from 80 pounds to 100 pounds, especially when a balanced ration is used. In many instances 100 pounds gain has been made on less than 400 pounds of grain when the pigs have had access to alfalfa forage.

Considering the present price of barley and tankage it is not difficult to figure that money can be made in feeding pigs. We have in this state no doubt a surplus of feed and it is just as true that there is a shortage of hogs. Considering the present selling price of cattle and sheep, it would be reasonable to expect that most of this feed will be put into dairy cattle and hogs, and as dairy cattle consume large quantities of roughage, no doubt a large percentage of surplus grain should be marketed in the form of pork.

An inquiry made on April 1, 1921, to ascertain the number of brood sows in California as compared with the number the previous year showed a seven per cent decrease. The estimated number of brood sows in California at that time was 86,000 head as compared to 93,000 head the previous year. During the year ending July 1, 1921, California Farm Bureau Marketing Association sold nine per cent less cars of hogs than they did during the preceding year, and this association no doubt handled a larger percentage of the hogs marketed in the section in which they operate than they did in 1920. It is impossible to estimate the number of hogs that have been shipped into California for slaughtering purposes during the spring months.

The situation demands some clear and constructive thinking. Many of our small ranchers are concentrating their investments in vineyards and in orange, prune and other orchards; others are concentrating their efforts in the production of alfalfa, barley, beans or wheat. Sooner or later our soil will demand the production of an increased amount of barnyard manure. In the southern part of the state this condition has already manifested itself, and a certain percentage of the growers are putting in herds of cattle, sheep or hogs primarily to furnish the orchards with humus which they are able to get in this way.

Since 1917 we have consumed more pork and pork products than have been produced in California. We need more hogs on more ranches in this state. On nearly every ranch there is a certain amount of grain, fruit and other products going to waste. A brood sow or two with their pigs will take care of that waste and in addition will become a source of income, either through marketing them in the farm bureau sale or in the form of cured hams and bacon.

Late census figures show that only four per cent of the swine in the United States are listed as pure breds. The pure bred breeders of swine, therefore, have a task ahead. They have an excellent opportunity to build up a home trade among their neighbors. There are few men but that realize that well bred livestock, whether it be cattle, sheep or swine, will gain more economically than livestock of nondescript breeding. In many sections large numbers of purebred animals, not registered, are fattened yearly. The feeder figures that the animal's ability to gain makes such a practice a profitable one.

The pure bred business is getting back to pre-war levels. The price of feed is such that many breeders can afford to develop a home trade by selling a few boars and brood sows and gilts to his neighbors. In so doing he is developing the swine industry in his own locality and is, in addition, creating a demand for the future by starting someone in the hog business and the selling cost has been small.

BREEDERS ORGANIZE

On October 26 the Ayrshire breeders of California and Nevada met at the Hotel Bellevue, San Francisco, to organize a local Ayrshire association. About 20 breeders and others interested in Ayrshires participated in the various discussions of the evening. The final decision was to organize under the title "The Southwest Ayrshire Association" with the states of California, Nevada and Arizona as its field of operation.

Last year the breeders in Washington, Oregon, Idaho and British Columbia were organized under the title of the Northwest Ayrshire Breeders Association. J. R. Maben of Fallon, Nevada, was at that time a resident of Oregon and was the first president of the Northwest association. Being now located in Nevada he has accepted the position of vice-president for Nevada of the new association. He brings to the Southwest a wealth of experience as a breeder and organizer and will look after the work of securing members in Nevada.

Mr. Hughes of Penobscot Ayrshire Farm, Cool, acted as chairman of the evening, and Mr. Wing of Elkhorn Farm, Watsonville, acted as secretary. The following permanent officers were elected: President, C. A. Le Baron, Norabel Ayrshire Farm, Valley Ford; vice-president for Nevada, J. R. Maben, Fallon; for California, L. W. Wing, Jr., Elkhorn Farm, Watsonville; for Arizona, A. McMinn, Litchfield; secretary-treasurer, Geo. W. Fry, Redwoods Ayrshire Farm, La Honda.

The president was authorized to appoint either three or five directors to work in connection with the elected officers. It was decided to hold the next meeting of the association at University Farm, Davis, during Stockmen's week in February, at which time a constitution will be presented by the committee which is to be appointed by the president. The question of finances was not settled, but was put into the hands of the president and his officers for decision.

All breeders who were not present at the meeting are requested to get in touch with the secretary at once in order that they may be put on the mailing list for the various announcements. Persons desiring to purchase Ayrshires or breeders having animals for sale should write the secretary, who will communicate promptly with all persons who have stock to sell or who are listed as desiring to add to their herds. This service will be free to all.—Geo. W. Fry, Secretary.

Cazier Sale Starts New Hereford Herds

Fortunate indeed were those who answered the call for the second annual sale of Herefords from the J. H. Cazier & Sons' herd which was held at the state fair grounds at Sacramento, November 1, as it is certain that no more desirable lots have ever passed under the hammer in this state than those offered in the above sale. No herd in the West is held in higher esteem than this Nevada herd and after a season of unusual success in the show rings it was expected that western cattlemen would look to the sale as an opportunity for securing foundation material of undoubted merit.

Fifty-three females and three outstanding young bulls were taken by 10 buyers at an average valuation of $255. While the price realized was somewhat of a disappointment the sale ranks among the three best held anywhere in the United States this fall.

Aside from the splendid quality of the offering, representing for the most part daughters of Harris Standard 2d carrying the service of Beau Blanchard 76th, the feature of the sale was the fact that practically the entire offering was taken by men just entering the business of breeding purebred Herefords. Messrs. Cazier can regard the sale as a splendid piece of promotion work for their herd that is bound to bring future custom to their ranch. Perhaps the most disappointing feature was the lack of appreciation shown for some of the better things, several of which had very successful show records to their credit.

A. F. Hayes, Edenvale, who is just starting a herd, can count himself lucky in securing the attractive senior yearling heifer, Carnation 4th, for $600, and the good young herd bull prospect, Sir Blanchard 2d, for $700.

Alec McDonald, acting for the University Farm, made two fine selections in lots three and four. The Baldwin Ranch, Pleasanton, got one of the best values of the auction in lot 2.

S. H. Cowell of San Francisco, wealthy cement manufacturer who is establishing a herd on a ranch near Perkins, Sacramento County, was the heaviest buyer, taking an even two dozen females and the good young bull Blanchard Jr.

C. B. Orvis of Stockton continued his buying and took seven females. Tooby Bros. of Eureka made their start with four females and the very excellent young bull Blanchard 6th. Ketcham Bros., La Grange, made their initial purchases and got four females. Dr. T. H. Stice of Napa was another to make his debut in Hereford circles and four good ones fell to his bid. A. E. Nourse of Capay laid a new foundation with the purchase of four heifers.

The sale was managed by C. L. Hughes of the California Breeders' Sales and Pedigree Company, Sacramento. H. L. Hull of Des Moines, Iowa, was on the block and John A. Bunting and John A. Davis passed up the bids from the ring.

FEMALES

1, Carnation 4th, Sept. 1919; A. F. Hayes, Eden Vale, $600.
2, Aurora 2d, May 1920; Baldwin Ranch, Pleasanton, $450.
3, Nevada 5th, Nov. 1919; University of California, $375.
4, Hortensia 9th, Oct. 1920; University of California, $240.
5, Artemesia 4th, Mar. 1920, S. H. Cowell, San Francisco, $220.
6, Starr 8th, Mar. 1919; Oliver Ketcham, La Grange, $260.
7, Imperial Lass 2d, Sept. 1919; C. B. Orvis, Stockton, $200.
8, Benign 3d, Sept. 1919; S. H. Cowell, $235.

BULLS

53, Blanchard 6th, Nov. 1920; Tooby Bros., $450.
55, Blanchard Jr., Apr. 1920; S. H. Cowell, $700.
56, Sir Blanchard 2d, Mar. 1920; A. F. Hayes, $700.

Bargains Prevail in the Morris Sale

It has long been held that Opportunity knocks at one's door but once. That the above dictum does not always hold was conclusively demonstrated at the recent sale of Holsteins from the A. W. Morris & Sons' herd. Opportunity not only knocked once but knocked 44 times—there being 44 head offered and sold—and in several instances literally had to kick the door in! On mighty few occasions in the Holstein development of this state have buyers had presented to them a more desirable offering, and the fact that the 44 head established an average of but $305 indicates just how much of a picnic the buyers had. Only one explanation of such an average can be offered—the sale came at a time when the men calculated to be the heavy buyers found it impossible to be present, and a lot of others stayed home expecting that the cattle would sell too high. The day set just happened to be an off day—for the Morrises. But at that the sellers were game and took the view that they had helped materially in distributing a class of cattle that would give outstanding satisfaction to the purchasers.

The top of the sale, $575, was twice reached, once when E. F. Gleason paid that amount for Segis Woodcrest Maid with a record of 763.57 pounds of butter, and once when F. F. Pellissier bought Segis Pontiac Charlotte De Kol.

A rare lot of young bulls sired by the leading Morris herd bulls failed to bring anywhere near real value. E. Swift Train of San Francisco bought the pick for $490.

Sixteen buyers absorbed the offering. Brooks & Peckham of Reno, Nevada, were the heaviest buyers. J. M. Hampton Jr. of Live Oak, J. F. Miller of Ripon, R. A. Gardinier of Sacramento and E. F. Gleason of San Juan Bautista furnished most of the competition.

The sale was managed by the California Breeders' Sales and Pedigree Company of Sacramento. Col. Ben A. Rhoades pronounced them "sold" after Col. John A. Davis worked the ring.

Off Summer Pastures

Your animals are coming off summer pastures and going on dry feed. It's a big change. Out in the succulent pastures, Nature supplies the tonics and laxatives to keep animals in condition.

—But unless you supply these tonics and laxatives to your stock on dry feed, you are not going to get full returns from your hay, grain and fodder. Besides, your animals are apt to get "off feed" and out of fix.

Dr. Hess Stock Tonic

Supplies the Tonics—Laxatives—Diuretics

It keeps animals free from worms.
It keeps their bowels open and regular.
It keeps the appetite and digestion good.
It conditions cows for calving.
It helps to keep up the milk flow.
It keeps feeding cattle right up on their appetite.
It keeps hogs healthy, thrifty, free from worms.
It means health and thrift for all animals.

Always buy Dr. Hess Stock Tonic according to the size of your herd. Tell your dealer how many animals you have. He has a package to suit. Good results guaranteed.

Why Pay the Peddler Twice My Price?

25 lb. Pail, $3.50 100 lb. Drum, $12.00

Smaller packages in proportion.

R. N. Clapp Sale

By Jack Klein

The biggest sale of Holstein cattle held in Southern California this year and one of the biggest ever held in the state was the R. N. Clapp sale at Hynes on October 21. Ninety-nine head of exceptional Holsteins passed into new hands at an average price of $420 a head. The total for the sale was $41,645.

Mr. Clapp had made some very fine records with these cattle and the larger part of them were excellent individuals. The majority of the females were bred to King Segis Pontiac Aero, the senior yearling son of King Segis Pontiac out of Evelina Calamo Korndyke, a great show cow. The wonderful show qualities of a large proportion of the offering helped the sale materially. Had they been sold a year or so ago in times of more money they would have brought double the amount and would have been worth it.

The top of the sale was the heifer Rosamaines Korndyke Beauty, who is making a great milk record as a senior yearling. In her first 180 days she was over 4,000 pounds above the present world's record heifer for the same time. She was in demand but was finally knocked down to Fred Hartsook of Lankershim for $3,000.

J. W. Snodgrass of Hueneme was on the job all day long buying calves for the Ventura County Calf Club and occasionally bidding in a good one for the Berylwood Stock Farm, of which he is manager. He paid $2,100 for the sweet two year old K. S. P. Joy May Beets, who was second in a strong class at Riverside. Mr. Snodgrass purchased 26 head in all and his selections for the calf club were excellent youngsters and at a price which few breeders would have accepted at home.

The great old cow Gerben Abbekerk Maid, who is considered one of the real foundation cows of the breed, went to the Maxwell Farms for $825. This old matron, who has twice made 34 pounds of butter in seven days, is making the biggest record of her career and will undoubtedly finish with over 30,000 pounds of milk for the year. Because some of the buyers had not arrived at the time the Maxwell Farms were able to buy the 31-pound cow Sharon Rose Norena for $500 early in the sale. This was one of the biggest bargains of the day.

Fred Hartsook secured a number of good cows, including Rosamaines Pontiac Gold Drop for $1,500, Nancy Calamo Korndyke for $1,450, and the great show cow Segis Walker Gelsche for $600.

Carl Ray of Lankershim and Perle Penrose of Pomona also bought a number of good ones.

The sale was handled by Chas. L. Hughes of the California Breeders Sales and Pedigree Company, and Col. Ben A. Rhoades was on the block. Considering the fact that a great many of the animals were below a year in age the average was remarkable for the times.

Following is a list of the higher priced animals and their buyers:

BULL

K. S. P. J. Count, E. G. Stinson, Orange, $435.

FEMALES

Rosamaines Korndyke Beauty, Fred Hartsook, Lankershim, $3,000.
Rosamaines May Korndyke, Perle Penrose, Pomona, $775.
Gerben Abbekerk Maid, Maxwell Farms, $825.
Aralia Maid, Maxwell Farms, $410.
Abbekerk Pontiac, Carl Ray, $825.
Syacres Ormsby Abbekerk Pontiac, Berylwood Stock Farm, $325.
Rosamaines Pontiac Gold Drop, Fred Hartsook, $1,500.
Sharon Rose Novena, Maxwell Farms, $500.
Rosamaines Rose Novena, W. B. Naugle, Santa Paula, $415.
Syacres Novena Netherland Segis, Fred Hartsook, $300.
Segis Walker Gelsche, Fred Hartsook, $600.
Pearl Walker Segis, Fred Hartsook, $400.
Nancy Calamo Korndyke, Fred Hartsook, $1,450.
Pearl Nancy Calamo, Fred Hartsook, $400.
K. S. P. Calamo Nancy, Maxwell Farms, $500.
K. S. P. Lucy Wayne, Hartsook, $500.
K. S. P. Queen Lucy, Maxwell Farms, $450.
Stanislaus Piebe Laura Pontiac, Carl Ray, $975.
Syacres Piebe Segis Pontiac, Charles Anderson, Burbank, $600.
K. S. P. J. Floria Canary, Ventura Calf Club, $275.
K. S. P. J. Novelty Pauline, W. B. Naugle, $275.
Lida DeKol Mechthilde, A. Zangl, Bellflower, $260.
Pearl Ertel, Ventura Calf Club, $225.
Pearl Pietertje Segis, Ventura Calf Club, $250.
Pearl Aaggie Hengerveld, Ventura Calf Club, $275.
Pearl Segis Again, E. Babcock, Riverside, $335.
Pearl Pride Dione, J. O. Fumey, Pomona, $290.
Pearl Countess, Ventura Calf Club, $250.
Hartwood Netherland Segis, Berylwood Stock Farm, $800.
K. S. P. Queen Pearl, Charles Anderson, $450.
K. S. P. Queenie, Maxwell Farms, $325.
Pearl Queenie, Ventura Calf Club, $240.
Rosamaines Colantha Zozo, W. S. Wheeler, Arcadia, $385.
Syacres Ormsby Zozo, Berylwood Stock Farm, $200.
K. S. P. Polkadot Beets, Carl Ray, $435.
Syacres Pearl Polkadot Beets, Ventura Calf Club, $200.
K. S. P. Prilly Mercedes, Carl Ray, $400.
Syacres Pearl Prilly, Ventura Calf Club, $250.
Minita Segis Pontiac, Berylwood Stock Farm, $1,050.
K. S. P. Mooie Diploma, Maxwell Farms, $350.
Pearl Diploma, Ventura Calf Club, $225.
Pearl Clothilde Lilith, Berylwood Stock Farm, $525.
Evelina Pearl Segis, Fred Hartsook, $575.
Pearl Joy Mabel, S. Holderness, Nestor, $210.
Pearl Tula Korndyke, Perle Penrose, $280.
K. S. P. Princess Hengerveld, George E. Walter, El Monte, $300.
Calamo Princess, E. R. Stalder, $200.
K. S. P. Clorinda Artis, E. R. Stalder, $315.
K. S. P. Queen Artis, C. L. Ostergard, Hyde Park, $300.
Pearl May Beets, James J. Jeffries, Burbank, $350.
K. S. P. Joy May Beets, Berylwood Stock Farm, $2,100.
Joy May Calamo, Mrs. H. Halff, Los Angeles, $210.
Rosamaines Rowena, Earl Graham, $700.
Wakefield Segis Chicago Duchess, W. B. Naugle, $410.
Pearl Chicago, Berylwood Stock Farm, $250.
S. P. Wa Wa, F. E. Voorhees, Inglewood, $430.
Pearl Benla Segis, Ventura Calf Club, $285.
Wakefield Segis Chicago Boon, E. R. Stalder, $600.
Novena Cara Mia, Earl Graham, $1.800.
Aralia Pontiac, Earl Graham, $625.
Evergreen Beauty 2nd, Carl Ray, $350.
Lakeview Johanna Korndyke, E. R. Stalder, $275.
Scenic Pietertje Colantha, O. E. Bowen, Pasadena, $245.
K. S. P. Adele Queen, George Walter, $290.
K. S. P. Lady Una, Maxwell Farms, $300.
K. S. P. Queen Veeman, Carl Ray, $400.
Pearl Veeman, Ventura Calf Club, $250.
Pearl Susie, Albert Pfeiler, Oxnard, $250.

K. S. P. Osma Johanna Segis, F. E. Voorhees, $400.
Pearl Johanna Osma Segis, J. Holderman, Santa Paula, $230.
K. S. P. Clothilde Lady, Maxwell Farms, $800.
Pearl Clothilde Segis Pontiac, Carl Ray, $250.
Pearl Woodcrest Pontiac, Berylwood Stock Farm, $300.
North Side Bos Butter Girl Korndyke, Mrs. J. Shilling, Hynes, $330.
Uneeda Roderick Beryl, E. R. Stalder, $200.
Visalia Princess Tritomia, F. E. Voorhees, $250.
Whittier Pontiac 3rd, Mr. McLinn, $310.
Rosamaines Minita, Hartsook, $400.

Edgemoor Farm Sale

By Jack Klein

For the first time in its history Edgemoor Farm, near San Diego, held a sale of Guernseys in its home state. Previous sales held by this farm have been in the East. Realizing the demand for Guernseys out here, Mr. Dupee made up a sale of young heifers bred to his great herd bull, Masterpiece of Edgemoor, principally for the benefit of the men in this state who need Guernseys. The sale was well supported and the average of $378.50 on 37 heifers was a good one. Many of these heifers were bred recently, and while a calf was guaranteed they will have to be carried for some time.

Adohr Stock Farm of Van Nuys, which has heretofore bought only bulls in the sales, stepped out and purchased some pure bred females, paying the top price of the sale for a two year old granddaughter of Governor of the Chene.

A score of purchasers snapped up the offering in short order, showing that Guernsey cattle are in demand.

The sale was conducted by the California Breeders Sales & Pedigree Co., and Col. Ben. A. Rhoades did the selling.

The Italian Vineyard Company, which is getting together a nice little herd, was one of the heavy purchasers and the Chaffey High School took a number.

The sales list follows:

FEMALES

Lily Saracen of Piedmont, M. H. Anderson, Santa Paula, $435.
Saracen's Tritoma, G. T. Drinkwater, $435.
Tritoma D., G. T. Drinkwater, $535.
Alpha's Omega of Burnham Acres, Adohr Stock Farm, $560.
Edward's Nancy, Italian Vineyards Co., $310.
Golden Princess of Rosemaple, Wikiup Ranch, $310.
Old Times Queen, Loring Farnum, $295.
Karolie's Marcella, Wikiup Ranch, $435.
Sallie's Butter Queen, Loring Farnum, $285.
Old Times, Wikiup Ranch, $325.
Royal Catania, Dorothy Fried, Chatsworth, $440.
May Queen's Ivy, Loring Farnum, $250.
Lucy of Beirnetown, Wikiup Ranch, $375.
Minnie of Beirnetown, Italian Vineyard Co., $450; Joy of Beirnetown, Dorothy Fried, $400.
Starlight of Beirnetown, Chaffey Project Farm, Ontario, $350.
Governor's Primrose of A. D. F. 2d, Wikiup Ranch, $400; Esther of Beirnetown, Ford's Farm, Redlands, $390.
Daisy Rita of A. D. F., Ford's Farm, $425.
Birchwood's Aurora, Charles Hartog, $310.
Violetta of the Lewis Farm, G. T. Drinkwater, $310.
Hero's Eva of Beirnetown, G. T. Drinkwater, $525.
Ellen of Beirnetown, A. G. McLouth, Los Angeles, $410.
Lillia of Vavarino, Italian Vineyard Co., $525.
Golden's Miss Daffodil, Italian Vineyard Co., $450.
Little Fantine of Lewis Farms, Adohr Stock Farm, $500.
Crackerjack's Fair Lass, Loring Farnum, $350.
Dello Mento of the Lewis Farms, Blackwood & McIntosh, $255.
Polly of Beirnetown, Blackwood & McIntosh, $285.
Cleland Bella, Chaffey Project Farm, $325.
Buckeye Irene of Mara Alva, Italian Vineyard Co., $300.
Esme of Warsaw, Wikiup Ranch, $410.
Telka of Warsaw, Charles Hartog, $360.
Bess Van Tassel, Charles Hartog, $275.
Butter Girl of Guernsey Home Farm, Charles Hartog, $285.
Lady Violet of Maple Grove, W. M. Miller, Lakeside, $340.
Birchwood's Tthelone, Charles Hartog, $385.

MALES

Corium Burnett, P. Cattani, Bakersfield, $225.
Corium Badger, W. J. Tench, Mentone, $300.
Corium Barker, Italian Vineyard Co., $210.
Corium Bruno, P. J. Dolan, Los Angeles, $130.
He's Jake, Blackwood & McIntosh, $130.
Lone Tree Starlight Beau, H. E. Rudd, Gardena, $150.
Lone Tree Royal, Blackwood & McIntosh, $160.
Birchwood's Aaron, A. E. Messer, Los Angeles, $150.
Birchwood Alford, Carl Shepherd, Compton, $130.

Livestock News Notes

Gardiner Blackman of Long Beach reports the sale of Poland China gilt, Countess Prescott, to Ralph Stokes of Long Beach. Gardiner claims this gilt is an exceptional individual weighing 240 pounds when five months old, with all possibilities of passing the 300 pound mark at six months. She has gained an average of two pounds a day since she was two months old, during which time she has been on a self feeder.

The Bridgford Holsteni Co., Patterson, has sold the senior bull calf, Sir Pontiac Segis Prilly, junior champion at the recent San Francisco show, to E. F. Gleason, San Juan Bautista. This youngster was sired by the many times champion, King Segis Alcartra Prilly, and is out of Woodbine Rosa Pearl.

The Gibson Holstein Co., Williams, announces the recent completion of one of the best Holstein records of the year by the aged cow Aaggie Korndyke of Nevada. According to Gion Gibson this nine year old cow has to her credit in 365 days 30,600 pounds of milk. The final figures for her butter production have not been received but it is expected that she will be credited within a few pounds of 1300 pounds. Aaggie Korndyke of Nevada was sired by Woodcroft Pontiac Korndyke, a son of Pontiac Korndyke, and her dam was Leda Hartog Queen Pietertje.

Henry Bates Perrin of Santa Ynez has purchased the Tamworth boar, K. S. Rival, junior champion at the National Swine Show last year.

Shortly before the San Francisco show Mrs. Romie C. Jacks of Monterey visited a number of the leading Hereford herds near Kansas City and selected a number of young things to add to the Imperial herd. From the Velie herd Mrs. Jacks selected the junior yearling show heifer, Phyllis Velie by Kenilworth. From the 1921 show herd of the Turner Lumber Co. she selected the senior bull calf, Laurel Perfection 2d. From the T. R. Early herd Mrs. Jacks secured a bull calf and four heifers sired by The Anxiety, a son of Beau Mischief, Jr. Mrs. Jacks also purchased an outstanding saddle stallion and a high class show mare from the noted Longview stables at Lees Summit.

Thos. T. Miller of Hollister has leased to the University of California the Shorthorn bull, Milmar Sultan. Milmar Sultan was sired by Mr. Miller's imported bull, Secret Stamp, and has for his dam the former show cow, White Mayflower. White Mayflower, it will be recalled, is a daughter of Sultan Mayflower, the bull formerly at the head of the college herd and regarded as one of the best sires ever in this state. Milmar Sultan was second in class at the San Francisco show.

J. A. Robson, general manager of the Associated Dairymen of California, died in a San Francisco hospital November 3 following a very brief illness. Robson was formerly a New York newspaper man and prior to taking up his work with the dairy organization served as superintendent of publicity for the 1920 state fair.

After missing last year the University of California will again be represented at the great International Livestock Show at Chicago this month. The institution will exhibit five steers, about 20 fat wethers and a number of pure bred barrows. In addition to the above stock the institution will show the junior yearling Shorthorn heifer, Mary Ann Rush, junior champion at San Francisco. On the whole the college exhibit is regarded as the strongest yet sent East and it is expected that new fame will be won for California.

R. A. Gardiner of Isleton has purchased the entire herd of registered Holsteins established about a year ago by William Dreher of Sacramento. Included in the herd are many exceptionally well bred cows with splendid production records. It is Mr. Gardiner's plan to install his new herd on a ranch near Isleton.

Representatives of the Kern County Land and Cattle Co. and the Jerome O'Neil ranch have been extensive buyers of Hereford bulls from breeders of the Kansas City district. As yet California breeders are unable to supply the demand for bulls on the part of local range outfits.

W. S. Guilford of the Butte City Ranch, Butte City, has sold his entire crop of Shorthorn bulls to the Merritt-Bowers Co. of Tulare. Guilford states that there is a keener demand for range bulls than he has experienced for several years and that apparently California range operators who have been staying out of the bull market for some time past are finding it necessary to restock this fall.

California Shorthorn breeders are looking forward with a great deal of interest to the sale to be held by Dr. H. M. Elberg of Woodland. This will be the second public sale offering made from the Roselawn herd and will feature the get and service of the white bull, Roselawn Champion. There will also be included a number of daughters of Village Beau, one of the best sons of Villager. About half the offering will consist of well known Scotch families. The sale is in no sense a dispersal but is made necessary through the growth of the herd to a point where there are not sufficient accommodations for it. The sale will be held at the beautiful Roselawn Farm adjoining Woodland and will be managed by the California Breeders Sales and Pedigree Co.

The forthcoming sale by members of the San Joaquin County Holstein Breeders Association will provide one of the last opportunities to select registered Holsteins at public auction this fall. The offering will be made up of consignments from the herds of J. M. Campbell, Escalon; R. Stevens, Stockton; J. C. Ramsey, Modesto; Edwards Bros., Escalon, and Salfield & Condon, Escalon. Sales Manager Hughes states that the various consignments are unusually attractive from both the standpoint of breeding and individual quality. Cows with records up to 32 pounds of butter and over 700 pounds of milk in seven days appear in the catalog.

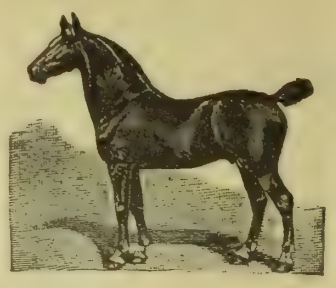
Keeping Your Horse

In

Perfect Condition



NO horse with a Spavin, Splint, Ringbone, Curb, Bony Growth, Capped Hock, Wind Puff, Strained Tendon or Sweeny can compete with his physically perfect mates, either in achievements or endurance. Splendid looking horses—otherwise sound—often fail because of some blemish that could be quickly removed with

Gombault's

Caustic Balsam

Whether you are the owner of race-horses or work-horses, you can prolong their usefulness by the use of this time-tested remedy.

Every stable should have GOMBAULT'S CAUSTIC BALSAM always on hand.

Supersedes all Cautery or Firing. Never leaves a scar or discoloration of hair.

A Reliable Liniment for External Human Use

Has no equal as a Liniment and counter-irritant for HUMAN USE. For treatment of Inflamatory and Muscular Rheumatism, Sore Throat and Chest Colds, Growths and Stiff Joints.

GOMBAULT'S CAUSTIC BALSAM if applied immediately to Burns, Bruises or Cuts, is a perfect antiseptic—soothing and healing. An absolutely safe external remedy for human and veterinary uses. Its fame is Nation-Wide.

Every bottle of Caustic Balsam will give satisfaction.

Sold by druggists, or sent by parcel post on receipt of price. $1.50 per bottle. Send for descriptive circulars.

THE LAWRENCE-WILLIAMS CO., *Cleveland, Ohio*

32 Roselawn Shorthorns

AT PUBLIC AUCTION

Roselawn Stock Farm

Owned by H. M. ELBERG

Woodland, California, Wednesday, November 16, at 1 P.M.

Village Beauty E

ROSELAWN SHORTHORNS, one of the longest established herds in the west, have for many years been held in the highest esteem by buyers of dependable Shorthorns.

Directed by constructive breeding practice, and by progressive business methods, the herd has consistently merited its high place among the units of the breed in the west.

Since its last public sale in 1919 the herd has multiplied upon itself and has been strengthened by the addition of choice individuals of fashionable pedigree, until the owner is again in position to offer at public sale a class of Shorthorns that will fully maintain the high standard of the herd.

The offering contains both Scotch and Scotch topped cattle, including cows with calves at foot, bred and open heifers, and a limited number of good young bulls.

Guaranteed Breeders—Tuberculin Tested

TERMS OF SALE: Responsible parties may arrange for credit, with the sale managers, on the basis of one-half cash, balance in six months, with approved notes bearing eight per cent interest, all credit arrangements to be made prior to sale.

Catalog of sale free on request.

Better Breeding and Feeding California's Beef Problem

By R. M. Hagen, Secretary, California Cattlemen's Association

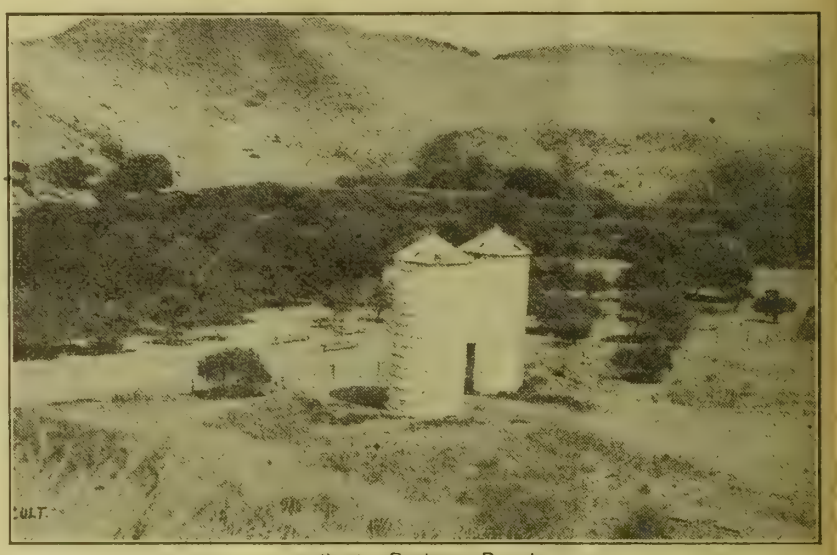
THE present price of beef cattle is causing the cattlemen to do a great deal of serious thinking. More committees have been appointed during the past 12 months to work out plans for the marketing of cattle than for many years previous.

So far as the Western states are concerned, the problem of marketing cattle is a very complicated one. In the first place the 12 Western grass feeding states produce one-third of the cattle, while at the same time they contain only one-tenth of the population of the United States. In other words, a large proportion of the cattle are produced in an area considerably removed from the big centers of population and consumption. Unlike many other commodities it is almost impossible to control a large percentage of the supply of cattle because they are produced in practically every state in the nation and in practically every county in California. With the center of production so far removed from the point of consumption the item of transportation is a very serious one at the present time with railroad rates practically double pre-war normal.

In California one of the most serious marketing problems is the glutting of the market at certain seasons of the year, and this fact brings us to a discussion of the real solution of the marketing problem.

Some time ago at a cattlemen's meeting at Salinas, H. A. Jastro, formerly president of the California Cattlemen's Association, again repeated the statement which he has made hundreds of times to California cattlemen. He stated that our cattlemen will not be entirely successful until they operate on a business basis, breed their own stock cattle rather than bring in feeders of inferior quality from outside the state, understock their ranges, feed in order to have fat prime cattle at all seasons of the year, and market their product in a scientific manner. In Mr. Jastro's advice to so feed that prime cattle may be available at all seasons of the year lies the solution of the marketing problem. This would avoid gluts at any one season of the year, and a more uniform price would exist. Unfortunately too few of our cattlemen really know what prime steers are. Not until they reach the market and come in competition with well fed cattle from other districts do they realize the different grades which go onto the market. The cattleman who watches the market quotations at northern and eastern points and is then disappointed with the price received for his cattle on those markets must learn that he is competing with cattle which are carefully fed and prepared for those markets by men who have had many years of experience in feeding to sell on a quality basis.

The other day I was talking with a group of cattlemen in Northern California. One of them told of his experience in taking a load of steers, of which he was very proud and which he considered of very high quality, to the Portland market. His steers were placed in a pen, and while he was away getting his lunch two loads of grain fed steers were brought into the yards from another state and placed on either side of his pen of cattle. He states that on his return he was almost ashamed to admit ownership of his cattle, and in fact he would almost have bet good money that they did not belong to him. This was splendid education, but unfortunately it came too late for that particular lot of steers. That cattleman, however, knows what different grades of cattle mean, and he knows that quality counts on a market where cattle are sold according to grades.



A Santa Barbara Ranch

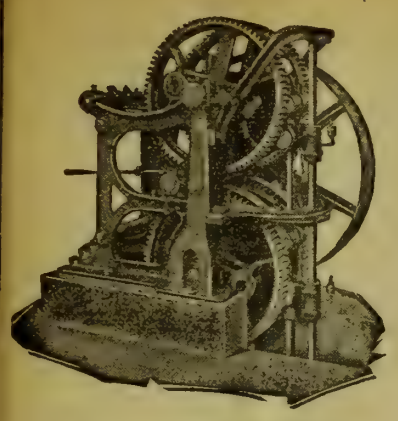
Too few California cattlemen deem it necessary to feed other than grass and fewer still appreciate the value of better bulls. Top prices are only paid for top cattle—well bred and well fed.

The United States department of agriculture has recently published an article in which is the following statement: "Only about one steer in every 200 of those going to market is graded as 'prime'; animals designated as 'choice' are estimated to occur only four times in 100. Steers graded as 'good' comprise 22 per cent, or between one-fourth and one-fifth of the whole. The third, or 'medium,' grade is most numerous, making more than one-half (53 per cent) of the total. 'Common' steers make up one-sixth, or 17 per cent, while 'canners,' the riffraff of the steer family, it is satisfactory to note, are not numerous, being only 3½ per cent of the total. Yet this class during 1920 was about seven times as large as 'prime.'

"On the basis of 100 points as the relative quality of a 'choice' steer based on price to the producer, the figures show that a good steer returned in cash approximately 85 per cent as much; a 'medium' steer 67 per cent as much; a 'common' steer 53 per cent as much; and a 'canner' only 34 per cent as much. Put in a more concrete way, if we assume that a 'choice' 1,000 pound steer sells for $150, steers of the same weight in the other classes would sell as follows: Good, $127.50; medium, $100.50; common, $79.50; canner, $51. Of course, it is realized that a steer of the 'canner' grade seldom weighs as much as 1,000 pounds, and not many of the 'common' grade reach that weight. So in actual practice inferior animals bring even less per head than the prices given.

"When these differences are applied on about 6.000.000 steers which are annually slaughtered, it can easily be seen that there are great possibilities to stock feeders in regard to increased cash turnover and profits.

"The question may be asked, What is the principal factor that determines the quality or grade of a steer and so fixes the corresponding high or low price which accompanies the market rating? . . . Without doubt the skill of the feeder and the character of the feed count for much, but the best feed in the world, no matter how skillfully applied, cannot make a market topper out of a typical scrub steer. There-



THE POMONA

Duplex Plunger Deep Well Pumps

are solving the Pumping problems for many users during the period of low water levels. They will lift the water to the surface, and, if desired, deliver it to high elevations above ground and at lower power cost than any other system of Pumping water.

Mutual Husbandry Club

NOW BEING FORMED TO DEVELOP A

New Irrigation District in Fresno County

Let us tell you all the details of the Mutual Husbandry Club. There are thousands of acres of land in Fresno County with unlimited agricultural possibilities when put under irrigation.

We want 500 members to vote the district — more than 250 have already joined. Members of the Club can obtain land at dry land prices of $50.00 per acre. Big profits can be made when district is voted.

MAIL THIS COUPON TODAY

fore, it is the opinion of department specialists that the dominating influence in determining class in the stock yard pen, as well as in the show ring, lies in the breeding of the animal."

"Some observant person might challenge this conclusion by saying, 'I noticed that in carcass competition at the big shows the championship frequently has been carried off by crossbreds; how, then, can it be a question of pure bereding? . . . If the records in such a case are examined it will be found that back of the crossbred there was carefully selected breeding on both sides, and in reality it was this pure breeding in the sire and dam that was the dominant factor in winning the championship."

Like most other problems the problem of marketing cattle must be solved on the home ranch by producing a high quality product. There is always a demand for the best.

The recent census figures show a very surprisingly small number of pure bred sires used in the state of California. With the increased number of splendid herds of pure bred beef cattle being established here there is no excuse for the continued use of inferior sires. Pure bred stock is cheaper today than it has been for some time, and this is a splendid opportunity for the cattleman to provide himself with good bulls for his breeding herd for the coming year.

TO DETERMINE MERIT OF HOGS BY EXPERIMENTAL BREEDING

Although there is a higher percentage of purebred hogs in the country than of any other class of livestock, there is still much room for improvement. And there is much to be known concerning the relative merits of scrubs, crossbreds, and purebreds. To make some of the points clearer the animal husbandry division of the United States department of agriculture is starting a breeding and feeding experiment that will contrast the results of using scrub, crossbred and purebred boars on scrub and crossbred sows. If appropriations provide sufficient money it may be that the effect of using crossbred and scrub boars on purebred sows will be studied.

Ten crossbred sows, of various breed mixtures, and ten scrub sows of the razorback kind will be used. Half of each of those groups will be bred to a purebred boar; half of the first group will be bred to a crossbred, and half of the other group will be bred to a scrub. This same scheme of breeding will be carried on from generation to generation. Some of the offspring will be fed out and some of them will be kept for breeding before being fed out. Shoats from the different lots will be put in feed lots together and fed alike so that a fair comparison can be made. Some of these scrubs and crossbreds will be compared in feeding trials with purebreds raised on the department's experimental farm at Beltsville, Maryland. Some will be put into different experimental lots on various feeds.

Nearly everybody thinks the purebred is superior to the scrub, but there is disagreement among farmers about the merits of purebred and crossbred feeders. The department hopes that in due time its experiments will give results that will answer any doubts.

SNEEZE WEED POISONOUS TO SHEEP

A plant poisonous to sheep on the ranges, and for which no practical method has been discovered either for eradication or for cure of the resulting disease, is desscribed in a recent bulletin of the United States department of agriculture. The weed is most troublesome in Utah, Colorado, Arizona, and New Mexico, and in the eastern half of southern California, as well as in scattered areas in eastern and western Nevada, southeastern Oregon, southeastern Idaho, and northwestern Wyoming.

It was first reported to the department in 1903 that a mysterious disease, characterized by vomiting, wasting away, and death, was attacking sheep in Utah. The disease was at first attributed to Zygadenus (death camas), but several years later department botanists observed that sneeze weed was usually found on ranges occupied by the affected sheep. Subsequent experiments covering five years fastened responsibility upon the sneeze weed. No effective remedy has been found, and sheep which do not die retain symptoms as long as two or three years.

The weed is a strong perennial, growing to a height of 1 to 3 feet, with one or several stems. The plant, when young, is often hairy or woolly, particularly the stems. There may be one or several flower heads, which are 2 to 3 inches broad with ray flowers of an orange color. The seeds are numerous and hairy. The plant occurs at elevations of 5,200 to 12,000 feet. Its best habitat is on sunny slopes of the southern spruce belt in moist and in well-drained soil. From the color of the flowers it is sometimes called "yellow weed", and some stockmen call it sunflower, but in Utah it is most commonly known as sneeze weed.

The weed seems impracticable of eradication. Digging out costs about $40 an acre, and cutting with a scythe only stimulates growth. Department scientists, therefore, see the only relief in acquainting stockmen with the appearance and character of the plant and warning them to keep their sheep away from infested areas.

MINERAL FEEDS FOR MILK COWS

Widespread interest in the use of mineral substances in dairy feeds has recently deevloped. This is due to more general recognition of the fact that heavy milk production causes consistently large losses of calcium, magnesium and phosphorus from the animal skeleton. Attempts have been made to replace or prevent these losses by feeding mineral mixtures of the needed elements. An animal possibly can make use of a very small part of certain minerals. However, the indifferent responses obtained in these experiments to the intake of large amounts of these elements indicates that the selective improvement of the cow for milk production has outreached her capacity to digest mineral nutrients.

Heavy milking cows deplete their skeleton supplies of calcium and phosphorus to a greater extent than the other elements. It is possible to furnish an adequate amount of these two elements as they are naturally present to a considerable extent in certain feeding stuffs. And the amount of phosphorus or calcium which an animal will assimilate or even tolerate when added to the ration as a soluble or insoluble mineral is much less than will be acceptable in its natural relationship in feedstuffs.

Cowpea hay contains larger amounts of calcium, phosphorus and other mineral elements than other hays: legumes as a class contain more of the mineral elements than other forage crops. In the following table cowpea hay and alfalfa may be compared with timothy hay for lime and phosphoric acid content:

	Lime Per Ct.	Phos. Acid Per Ct.
Cowpea hay	2.5	.56
Alfalfa hay	1.4	.50
Timothy hay	0.23	.25
Peanut meal	0.09	.45
Cottonseed meal	0.36	2.70

Feeds grown in limestone regions contain more lime and phosphoric acid than the same feeds grown on soils poor in these elements. Heavy fertilization with phosphates likewise adds to the amounts of the elements built up into the plant.

While lime is abundantly supplied by legume hays, phosphoric acid is relatively deficient, and concentrates which contain large amounts of it should be selected for feeding with the hays. Cottonseed meal answers this purpose very well, as does also wheat bran; both of these contain only small percentages of lime. Peanut meal, and in fact all leguminous seeds, are deficient in mineral constituents.

Cottonseed meal and peavine hay deserve an important place in rations for cows on high milk production on account of the supplementary value of their mineral nutrients.—F. H. Smith, Chemist, Georgia Experiment Station.

Eighty-three Illinois farms with scrub cattle cleared an average of $234 a year, while 124 farms with pure breds made $1,102.

A man with scrub cattle is like a builder with bad lumber.

Gill

One-piece Piston Rings

reduce fuel consumption

Because: they are *individually* cast from a special gray iron that retains its tension, elasticity, and vitality under all the intense heat and terrific stress and strain of piston ring service. Gill Piston Rings, under all conditions and for thousands of miles, exert an all-around, uniform, leakless contact with the cylinder walls. They hold *all* of the fuel in the combustion chamber where *all* of it can be compressed into power. Where there are Gill Rings there is no waste.

CASH FOR YOUR TURKEYS AND POULTRY
WILL WE TREAT YOU RIGHT?
It is unthinkable now that we should imperil our position by abandoning the policy that has made us. We have always been particularly interested in all California producers of poultry products and have never yet failed to give them every preference.
WHY?
Because we are a Southern California Corporation interested in Southern California and if the production grows, we grow. This explains why we were unanimously chosen by the Poultry Producers' Association of Southern California, a body of one thousand leading poultry producers, to exclusively handle 150,000 of their broilers, and by the San Diego County Poultry Producers' Association, with over seven hundred members, to handle 100,000 of their broilers, an honor of which we are proud.
YOUR INTERESTS ARE OUR INTERESTS.
GET OUR PRICES BEFORE SELLING.
We pay cash f. o. b. Los Angeles, San Diego or Holtville, Cal.

Must Be Sold—We have new Beeman tractor with belt pulley, magneto, rims, 8-inch plow and cultivator that must be sold to satisfy an account. Its value is $436.50. The first order with deposit of $25.00 gets the outfit for $347.00. It is fully guaranteed. H. V. Carter Motor Co., 52 Beale St., San Francisco.

For Sale — Rebuilt windmills, tanks, pumps, cylinders. Why pay more. We make galvanized tanks, 400 gallons, $16.25; 600, $26.25; 1000, $36.25; 2000 capacity, $48.25. New irrigating pipe, all sizes for less. Why pay more? Demmitt Co., office 120 N. Main, L. A. Phone 15191.

For Sale at Bargain Prices—One 750 gal. heavy steel oil tank and wagon; one six foot land leveler; one International feed grinder; one four-gang Stockton plow. Drew Carriage Co., Ontario, Cal.

For Sale—One C. L. Best 12-25 Tractor, in fine shape. Might take as part pay span of good mules or horses. Terms to responsible party. Address Box 279, Sawtelle, California.

Land Leveler—For Rent or For Sale cheap on easy terms. Satisfaction guaranteed. Sizes five to ten feet. James A. Johnson, Box 425, Stockton, Calif.

Heavy Yuba No. 99 Disc Plow, five 24 inch discs, $200.00. La Mesa Country Club, La Mesa, Calif.

RABBITS

New Zealand Reds — Splendid type, 3 months old, $5.00 pair, $6.50 trio. Armstrong's Rabbit Farm, Petaluma, Calif.

Pedigreed Flemish Giants — No fancy prices. Maud Beeching, 1573 W. 46th St., Los Angeles.

GOATS

For Service—Pure Swiss Toggenberg Buck—Sire California Chief — Heavy Milk Strain. Arcadia Goatery, 50 R 11, Arcadia, California.

SEEDS AND PLANTS

ROOTED VINES

For Sale — Clicante-Bouchet. Malaga, Thompson Seedless and Zinfandel rooted vines. These vines are guaranteed A No. 1, true to name; certified and from clean producing vines. Chapman & Son, Modesto, California. P. O. Box 906, Phone 663.

Sweet Clover Seed for Sale—Buy direct from the producer and save money. Fine clean seed 15c per lb., cheaper rates on 100 lb. lots. Order early for fall seeding. Write for samples. Address George Forest, Standish, California.

For Fall Planting Carolina strawberry plants, 150,000 strong, vigorous plants best and most productive, good shipper, good crop first year. Enquire or write for prices. Olive Ranch, Lakeside, San Diego County, California.

Strawberry Plants for Sale—Extra strong "Happy Valley" Marshall plants for fall planting vigorous plants that will insure best results. $1.00 per hundred, $8.00 per thousand. Address Jack McCrory, Olinda, Shasta County, California.

For Sale—Sturdy Plants of pansies, violets, stocks, snapdragos, sweet williams, cosmos, baby primroses, foxglove, canterbury bells, columbine, verbena. Postpaid, 50c per dozen. The Hopkins Nursery, 163 S. Hartwick Ave., Eagle Rock, Cal.

McNeely's Hulless Barley — Propagated and grown at Alpaugh, Cal. The kind that brings you big returns. Any amount you want. Chas. McNeely. Alpaugh, California.

Strawberries Six Months in the year. Plant Everbearers, Superb, Progressive; $2.00 hundred. EVERBEARING RASPBERRIES six $1.00. Inspected. Fred Leissler, Route 6, Seattle, Washington.

For Sale—Cabbage Plants—L. C. Johnson, plant and vegetable grower and shipper, 795 W. 7th St., Pomona, Cal. Phone 2987.

Cory Thornless Blackberry Extra Large Plants, ready; 12 $2.40; 24 $4.40 postpaid. Illustrated price list. Write Chas. E. Mortenson, Route 1, Lodi, California.

500,000 Grape Rootings, 25 kinds. Order quick—75 per cent of wine grape rootings now sold. Box 501, Fowler, California.

Alfalfa Seed — Certified Hairy Peruvian, Smooth Peruvian, Common. Write for samples and prices. Delta Seed & Feed Co., Yuma, Arizona.

Strawberry Plants—Carolinas, $1.75 per hundred. Golden Bantam popcorn 10c per pound. K. Wilhelm, Hyde Park, Cal.

HORSES

For Sale — Imported Percheron Stallion, good bone, fine action, excellent disposition, easy and safe to handle. Sires satisfactory colts with good dispositions. Several times grand champion. Worth $2500. Will sell for $1500, or consider trade for hay, straw, manure or heifers. J. J. Prendergast, Redlands, California.

HORTICULTURAL PRINTING

Catalogues and Booklets, office forms and correspondence stationery for the nursery, seed and florist trade; half-tone cuts of many standard plants. Correspondence invited. The Kruckeberg Press, 236 Court St., Los Angeles.

WHERE TUBERCULOSIS EXACTS THE HEAVIEST TOLL

An analysis of the accredited herd work by states shows that the greatest mount of tuberculosis exists in the astern states, notably the New England group. The per cent of reactors as greatest in New York with 17.05 er cent out of a total of 76,601 head ested. New Hampshire gave 13.15 per ent, Massachusetts 13.15, Rhode sland 12.57, Connecticut 7.91, Maryand 7.95, and Delaware 13.79. The outhern and some western states ave the least reactors, Alabama, Aransas, Tennessee, Utah and Washingon running less than 1 per cent.

In those states showing the lowest er cent of tuberculosis it is probable hat little new testing is in progress. lthough there is a great variation in he amount of tuberculosis in the difrent states, nevertheless the eastern tates have far more than the southern nd some of the Rocky Mountain tates.

California stands between the two xtremes. In years gone by this state as early recognized as an ideal area r dairying and cattle raising in genral. Its warm, uniform, balmy climate required little shelter and expense for maintaining a herd of cattle. owever, the early types of dairy ows, being crosses of wild and Spanh stock, were not high producers. In rder to improve their stock our progressive antecedents made large shipents of cattle from the east, New ork and Massachusetts being the tates chiefly patronized.—J. C. J.

PROTECTING DOMESTIC STOCK

The prevalence of foot and mouth isease in some European countries, certain sections of Asia and Africa well as in South America, has caused the United States department agriculture to institute special uarantines against importation of vestock from these places. This ystematic survey of foreign sources of breeding stock and protection against the introduction of diseased animals is annually worth millions of dollars to the livestock breeders of the United States.

Any one who wishes to import cattle, sheep, goats, swine, or other animals from any country, except Canada or Mexico, must first obtain from the secretary of agriculture a permit to be presented to the American consul at the port from which the animals will be shipped. No permits are issued for shipment from countries where rinderpest, surra, foot and mouth disease or contagious pleuropneumonia exist.

Foot and mouth disease prevailed to a certain extent in England during the past two years, but recently has been abated to an extent.

AMERICAN BERKSHIRE CONGRESS

The American Berkshire Congress will hold its annual meeting and sale at Riverside on February 20, 21 and 22. According to present indications a greater number of breeders will come to California than have ever before attended a National Congress. D. J. Bastanchury of La Habra, president of the Congress, has appointed his committees and they are leaving nothing undone to make this event the greatest in Berkshire history.—Geo. A. Stingle.

DAIRY FORCE INCREASED

Charles J. Grinsell and Earl C. Smart have recently accepted positions as junior dairy inspectors of the division of animal industry in the state department of agriculture. Mr. Smart will work in the lower end of the Sacramento Valley and Mr. Grinsell in the upper end. The addition of these men to the dairy service force will fill a large gap in the inspection work which has been badly in need of attention.

CALIFORNIA IS FREE OF TEXAS FEVER TICKS

The proclamation issued by Governor Stephens recently, revoking the quarantine against the Texas fever tick, which was established by proclamation in Tulare and Kings Counties, January 25, 1919, will be gratifying news to the public in general as well as the cattlemen of the state.

The state is now free of Texas fever tick and it is the duty of every one interested either directly or indirectly in the maintenance of tick-free cattle to lend full assistance to the state department of agriculture at all times in preventing another invasion of any part of the state by this predatory insect.

VALUE OF SMALL FORESTS

Americans have something to learn from the way in which very small areas of otherwise waste land have been made to grow timber in old world countries. Oaks, ashes, pines and other trees are planted on old gravelpits, rock piles, steep banks, edges of sloughs, roadsides, etc. If one takes up H. Jackson's "Short Manual of Forest Managment," which the University Press of Cambridge, England, publishes, he soon discovers that the care of small forests, often of but a few acres, is really an important matter for foremen and owners of land to understand.

There is a great deal now in print here in America about the best management of wood lots, shelters, windbreaks, roadsides and avenue trees, etc. We have literally thousands of otherwise well kept farms in California which very much need groups of trees for shade and shelter in every field where livestock is even turned out to pasture. Call them groves if one likes, but if rightly started they will help to furnish posts, hard woods for farm use, and fuel.

The eucalypti are less planted in these days than they were 30 years ago. Various species of deciduous hard woods are thought best in many parts of California. This matter ought to be taken up by the farm advisors of every county, and such working plans adopted that each neighborhood develops towards definite unities.—Charles H. Shinn.

HEATHS BECOMING POPULAR

For many years that fine group of shrubs known as heaths, botanically species of erica, were imported from Europe. Then began their propagation in the damper coastal regions of California, from Eureka to San Francisco and the bay region down to Santa Cruz. Now the growing territory takes in the whole state and one firm in Pasadena has grown and flowered 21 species, ranging from white to purple in color of flowers, Erica melanthera (black anthers) being the darker of the lot. One like the last in other respects has rose pink anthers. But these belong to the small flowered type. Another class has long tubular flowers, in some species two inches long. All shades of color in the range noted may be had, for the hybrid varieties are many. They thrive in all parts of the state if properly cared for. Only in the hottest and driest spots does the foliage sunburn.

In an Orange Grove, Penetrating the Soil from 14 to 16 Inches, Thus Breaking Up the Plow-sole Which Forms Below the Depth of Average Cultivation

WATER RATES ADJUSTED

The Coneland Water Company, serving an irrigation area of 13,000 acres on the east side of the Sacramento River in Tehama County, has been allowed a rate of $3.50 an acre a year by the railroad commission. Present rates are $1 and $2 an acre according to the date of water contracts, the large majority of consumers paying the $2 rate. Under the contracts the amount of water agreed to be furnished was one-fifth of a miner's inch an acre. Finding that this amount was insufficient a large number of the consumers entered into a contract with the company, agreeing to pay $3.50 an acre provided an adequate amount of water was furnished and that the company would stand ready to turn over the system at any time within two years to an irrigation district at a price of $125,000. The company further agreed to spend in the meantime on permanent betterments any surplus accruing from the $3.50 rate.

TWO DESTRUCTIVE RUSTS

In a recent issue of "Science" a writer calls attention to two rust fungi that seem to possess the possibilities of great harm, but which have not yet invaded the United States.

There is a rust of peanuts widely distributed in South America, and becoming common in the West Indies. It is usually designated by the name of Uredo Arachidis, although a sample from Paraguay would indicate that it should be called Puccinia Arachidis. It has been known to mycologists since 1884, but has only very recently attracted the attention of cultivators. The second rust to which the author calls attention is Puccinia Pittieriana, which attacks potatoes and tomatoes. It was collected by H. Pittier on the wild potato in 1903 and 1904, and again in 1916 by E. W. D. Holway on the slopes of the volcano Irazu in Costa Rica. It has been mentioned also under the name of Uredo Pittieri. The author has examined specimens from Ambato, Ecuador, where it was found in 1918 both on potatoes and tomatoes.

Squabs---An Undeveloped Industry

By Jean A. Koethen

THE hero of this story is a man who besieged the Cultivator office a few weeks ago in search of information about squab raising. He didn't get much for there has been an impression prevailing the last year or so that the squab business was "a dead one" and not to be considered seriously by folks who had a living to make. Some little inquiry elicited the fact, however, that whatever its status may have been during the war, squab raising is looking up now and has possibilities. To find out just what these are I went to Mrs. Kathryn Ross of Red Wing Ranch, Glendale, one of the very few commercial pigeon breeders who have weathered the storms of the last five years.

Mrs. Ross has bred pigeons in Southern California for 11 years and knows all there is to be known about the past, present and future of the squab business. She had hardly begun to answer the questions I fired at her when who should drive into the yard but Fred S. Dixon of the Glendale Pigeon Lofts, looking for a few squabs to fill out an order. Mr. Dixon is a busy man, head of a 5,000 bird plant, and he had an order to get off. Nevertheless he sat down, and listening to the two of them at once was like taking a course in pigeon culture. I knew more about squabs when we got through than I ever expected to learn.

Feeding by Regurgitation

Possibly every Cultivator reader knows that squabs are fed by regurgitation, and this is what makes squab raising so much simpler and easier than raising little chicks. Instead of feeding the babies you feed the mother and she does the rest. The "pigeon milk" that is manufactured in her crop and stuffed by her into the crops of her two fat babies must be the most nourishing food that was ever given to a baby of any kind, for the squab doubles its weight every day at the start. After the first two weeks, when Mother Pigeon has gone to sitting again, Father Pigeon feeds the squabs. I do not understand that he regurgitates, but he does the feeding, and the little birds are expected to be ready for market before they can run around and pick up their own feed. Father Pigeon also does part of the sitting, taking his turn regularly, as a rule, Mrs. Ross says, from 10 o'clock to 3.

Income from Carneaux

Both Mrs. Ross and Mr. Dixon prefer the Carneau to other breeds for squab production. They make the best parents, the squabs are always nice and vigorous, and they are of the size which markets most readily, from 9 to 10 pounds to the dozen. "On Orange Grove Avenue," said Mr. Dixon, "they will take the squabs just as big as you can raise them, but clubs and the big markets prefer to have them weigh a little less than a pound." "If I could make squabs in a mold," declared Mrs. Ross, "and turn them out exactly as I wished them, I would make them weigh exactly 12 ounces each." The reason is just here: A squab weighing a pound dressed is bigger than the clubs can afford to serve with a dinner order, and the fashionable diner does not care for half a squab. Therefore the 12 ounce squab which can be served whole is most desirable.

What income should a pair of squabs produce? Mrs. Ross had one pair of Carneau that produced a pair of squabs every month for nearly three years. Two dozen squabs, let us say, weigh 18 pounds, and at 65 cents a pound, which is the current price, will figure up to the nice little sum of $11.70. But that pair of breeders was doubtless exceptional, and feed costs a good deal. Both Mr. Dixon and Mrs. Ross expect a pair of pigeons to produce, over and above expenses, $2.50 a year. It costs the same to feed a pair of pigeons that it costs to feed one hen, but $2.50 is better than the average hen can do.

Then there is the item of manure. Last year, from his 4,600 birds Mr. Dixon sold 14 tons of manure at $32 per ton. In previous years he has received as high as $39 per ton. One year when he kept 9,000 pigeons his income from manure was $1,000.

Begin Slowly

To go into squabs on anything like a commercial basis one would need 1,000 pair of pigeons, but it is not likely that so many pair could be purchased in the state even if it were wise for a beginner to venture so heavily.

"Begin with 20 pair of mated birds," is Mrs. Ross' advice, "and raise your own breeding stock, but be sure your birds are mated. They should be guaranteed to have raised young before you pay your money for them." Good vigorous breeders can be purchased at from $3.50 to $6 per pair, so the initial outlay is not great. A pen for the 20 pair costs about $22.50.

Tobacco Stems for Mites

Pigeons do not require the immaculate cleanliness that is necessary in poultry yards, in fact, they seem to do better when the manure is left in the nests until it must be removed to make room for the squabs. Mites must be guarded against, and this is done by the use of tobacco stems for nests. With these stems underneath the manure there is no chance for mites to breed, and the young birds are not worried by cleaning.

Feeding the Breeders

Feeding must be done always with common sense and discrimination. The birds should have all they will eat, but nothing should be left on the ground to attract mice and rats. Mr. Dixon feeds at 7 a. m. and 3 p. m., and then goes through his pens again in 20 minutes, giving a little more to those that require it. Birds that are feeding squabs need twice as much as birds that have no squabs. Mrs. Ross feeds a tomato can full twice a day to a pen of 20 birds. All feed is thrown on the ground. Green feed is not necessary. Many amateurs think their birds must have it, and it does them no harm, but they do not need it.

Regularity in feeding is extremely important. The birds always seem to know when their feeding time arrives and are restless till they are fed. Whatever hours are chosen, stick to them, and let nothing interfere.

The beginner should not try to mix his own pigeon feed till he has raised 500 pair. This is another way of saying, "Don't mix your feed till you know how." Prepared pigeon feed may be bought at any feed store and is entirely satisfactory, but when a very large number of birds are kept it is slightly cheaper to buy the grains and mix them.

Only hard grain is fed to pigeons, and it should all be the cleanest and sweetest obtainable, free from mold and rust. The formula Mr. Dixon is following at present consists of 650 pounds milo, 650 pounds kafir, 400 pounds wheat, 300 pounds corn, 65 pounds hemp seed, 70 pounds sunflower seed, 100 pounds Canadian peas. When Canadian peas are not obtainable soy beans are used in their place. Sunflower seed is not used in winter nor when it is very expensive. To the above mixture is added for squab feeding a little bit of peanut hearts. This is a feed that must be used with great care and is not recommended for beginners. Only flint corn is used. As the squabs remain in the nest from the day they are hatched till they go to market four weeks later, it is easy to see that their lack of exercise must be counterbalanced by the greatest care in selecting feed.

Fresh water for drinking and bathing is always before the birds, and three times a week they are given the following medicated grit preparation in stone crocks: 3 quarts grit, 1 quart shell, 1 pint charcoal. This is wet with a saturated salt solution and fed wet. As pigeons have no gall salt is absolutely essential to their health.

Supply Makes Demand

The demand for squabs is far beyond the supply. Except for a short time in the spring when Leghorn broilers flood the market, the demand from high class hotels and clubs and

Poultry Can Be Made Profitable

wealthy homes is pretty steady, but it would be greater and steadier if the supply could be counted on. "If you order squabs and can't get them, pretty soon you won't order any more," is Mrs. Ross' way of stating the case in a nutshell. Squab raising has never been gone into largely in this state. The war cut the industry down to practically nothing. With the return to normal in many respects, though feed is still too high, has come a renewed demand which only needs encouragement. It is not necessary to have an "Eat a squab" day or a campaign to instruct the public on the value of squabs as a diet. All that is needed is that there shall be a supply approximately equal to the demand.

Poultry Queries

Conducted by Jean A. Koethen

Hawks

Will you kindly advise me what to do to prevent hawks from getting chickens? I have a new place and recently bought a hundred chickens. The hawks are so bold that they even run into the coop and get them. I have tried shooting, but without result.—Subscriber.

The only sure remedy I know is to cover your runs with wire. If the chickens are small it will not take a great deal of wire to keep them safe. If they are older you will need larger runs and more wire. If any reader of this column knows of any better or cheaper way to keep hawks away from chickens, the information will be appreciated.

Rheumatic Turkeys

Several of our late hatched turkeys, birds three to four months of age, have developed a peculiar trouble. There is first a slight turning outward of the left leg, which gradually increases till at the end of two or three weeks the leg is at right angles to the body. Examination shows a general curve of the leg bones from foot to hip joint. This same trouble has appeared in other flocks this year.—Subscriber, Ramona.

Twisting of legs and toes in young turkeys is generally believed due to rheumatism caused by exposure, especially from running on damp grass or on the cold, wet ground in the early morning. But why only the left leg should be affected I do not know. Your first step toward a cure is to examine conditions carefully in order to determine just what the cause is. Turkeys of that age ought to be able to roost out in the rain without contracting rheumatism, but the weather has been rather trying this fall on account of the sudden changes from hot to cold and wet. Possibly they have not roosted out and have taken cold, finding the change from warm roosting quarters to damp outdoors too great. Painting the affected limb lightly with tincture of iodine every other day may help to relieve the rheumatic condition, but protection from dampness and a liberal supply of green feed are best preventive treatment.

STORRS EGG LAYING CONTEST

Storrs, Connecticut, Oct. 1, 1921.—Report for the week ending Oct. 10, 1921.

The ambition of every owner of every pen in every laying contest is to have his pullets average 200 eggs during the hen year which starts on November 1 of each year and ends on the last day of the following October. In the laying contest at Storrs a pen of White Leghorns from Cooperstown, New York, another pen from Hollywood, Washington, and a pen of White Wyandottes from Bridgeton, Rhode Island, have already passed the high water mark and there are still three weeks to go. In other words these three pens with a total of only 30 hens in all have laid more than 6,300 eggs. Before the race is over on the thirtieth of October the management of the contest believes there will be three other pens in this group.

In the 49th week the total production for all pens was 1,878 eggs, or a yield of nearly 27 per cent. Hollywood Farm's pen of Leghorns is an easy first for the week with a score of 41 eggs.

The eleventh annual laying contest will start on the first day of November.

The four leading pens in each of the principal varieties are as follows:

Plymouth Rocks

W. H. B. Kent, (Barred), 1,942 eggs; Jules F. Francais (Barred), 1,677; Rock Rose Farm (Barred), 1,671; James F. Macdonald (Wh. Rocks), 1,494.

Rhode Islands Reds

Charles H. Lane, 1,928 eggs; The Orchards, 1,778; Sunnyfield Farm, 1,730; Henry P. Walker, 1,714.

White Leghorns

Hollywood Farms, 2,129 eggs; L. E. Ingoldsby, 2,042; Ernest H. Scott, 1,964; Burchell & Janson, 1,950.

Other Varieties

Obed G. Knight (White Wyandottes), 2,152 eggs; H. P. Cloyes (Buff Wyandottes), 1,670; A. E. Hampton (Black Leghorns), 1,527; Clemens J. Diemand, (Wh. Wyandottes), 1,478.

NATIONAL EGG LAYING CONTEST

By T. W. Noland

Missouri State Poultry Experiment Station, Mountain Grove. Report for September:

The 300 hens in the contest laid 3,619 eggs during the month or an average of 12.06 eggs per hen. Pen of S. C. White Leghorns owned by D. Tancred, Kent, Washington, and Pen of S. C. Anconas owned by J. A. Pankey, California, Missouri, tied for leading pen for September, each pen laying 99 eggs during the month.

Number eggs laid by different breeds for the month and to date are: Leghorns, 580, 9,969; Wyandottes, 606, 9,245; Plymouth Rocks, 661, 9,069; Miscellaneous, 620, 8,977; Anconas, 509, 8,932; Rhode Island Reds, 643, 8,851.

Ten leading pens for September are: Anconas, Missouri, 99 eggs; S. C. White Leghorns, Washington, 99; White Wyandottes, Missouri, 97; Barred Rocks, Canada, 96; S. C. Reds, Colorado, 94; Barred Rocks, Illinois, 93; R. C. Rhode Island Whites, Illinois, 86; White Wyandottes, Missouri, 83; White Wyandottes, Illinois, 83; S. C. Reds, Connecticut, 83; Silver Campines, Ohio, 83.

Ten leading pens to date are: S. C. White Leghorns, Washington, 1,210 eggs; White Wyandottes, Missouri, 1,204; S. C. White Leghorns, Missouri, 1,165; S. C. White Leghorns, England, 1,135; R. C. Barred Rhinelanders, Michigan, 1,103; Anconas, Missouri, 1,087; R. C. Rhode Island Whites, Illinois, 1,085; S. C. White Leghorns, New York, 1,075; S. C. Reds, Colorado, 1,059; S. C. Reds, Missouri, 1,033.

FARM BUREAU EGG LAYING CONTEST

The third annual contest started at Santa Cruz October 1 with 744 pullets entered.

As precaution against chicken pox all have been vaccinated. Proof has not been fully established that vaccination for pox as a preventive is certain, but results have been evident enough to warrant the vaccination of thousands of pullets each year in the Petaluma district for this purpose. All entries are of the Single Comb White Leghorns, except two pens of Barred Rocks.

Pens laying over 60 per cent the first ten days were: Alex Stewart, Santa Cruz, 72 eggs; L. A. Thornewill, Santa Cruz, 70 eggs; C. E. Hyde, Seabright, 69; Levi Mellon, Santa Cruz, 69; Lytton Electric Hatchery, Lytton, 67; Paul Tallman, Santa Cruz, 64; H. H. Corbett, Santa Cruz. 64; Geo. Gray, Santa Cruz, 62; Hanson's Poultry Farm, Corvallis, Oregon, 61; E. D. Crewdson, Santa Cruz, 60.

For the ten days the whole flock, including all birds, laid 2,297 eggs, or just a trifle better than 30 per cent. A number of the pens are late hatches and are not laying at all.—Max Kortum, Manager.

HONEY

Warm weather in September and October has improved the late honey flow in the Sacramento Valley. Bees in Southern California are reported not going into the winter in very good shape. Carlot supplies are practically exhausted except of alfalfa honeys. Demand has been light except for alfalfa, but market is firm due to light supplies. Considerable honey is being disposed of locally in small lots. Carlots f. o. b. usual terms at loading points, per lb. Extracted: White Orange Blossom nominally, 11@12½; White Sage nominally, 10½@11½; Light Amber Sage, 7½@8½; Light Amber Alfalfa, 6½@7½; Hawaiian honey, f. o. b. San Francisco, per lb., white, 6½; Light Amber, 5½; Dark Amber, 4½. Beeswax: Practically no demand or movement. Growers receiving 20@22 per lb. for good wax in small amounts.
Beeswax: Practically no demand or movement. No sales reported.

GRAIN AND FEEDS

Grain Exch. price bid Nov. 8:
Barley: 100 ton lots, Nov. del., 1.28.
Milo: 100 ton lots, Dec. del., 1.33.

HAY

Alfalfa Growers of California report:
The market continued firm under good demand for spot lots as well as for shipment. Choicer grades somewhat higher. We only have to compare low prices here with those received by growers in other states, as for instance with 5.00 baled, in Nevada, 6.00 in Colorado, 1.50 in South Dakota, etc. We believe our growers here do not realize how near they came to suffering the same fate; all that saved them from it is the association.
There were 1,090 tons of grain and alfalfa hay received on Los Angeles tracks the week ending November 5, with 270 tons held over.
Prevailing prices last week, delivered in the vicinity of Los Angeles:

No. 1 Dairy Alfalfa	22.00
Standard Alfalfa	17.00

Quotations by Nichols-Loomis Company. Following are prices to growers f. o. b. Los Angeles in carload lots; handling and commission must be added to obtain retail prices on new hay:

Tame Oats	20.00@26.00

HAY AND FEED

Francisco:	
Choice Dairy Alfalfa	16.00
Standard	15.00

A. W. Scott Co. says:
Arrivals past week 600 tons as compared with 691 the previous week. Receipts continue about 50 per cent of normal and our city market has shown a steady improvement with values hardening. While buying has not been active it has been sufficient to move hay promptly and to clean up arrivals as fast as received. Poorer grades are still slow but better qualities are in demand and at slightly better figures. Interior trading shows little change in price though moving in increased volume. With the calling off of the threatened rail strike a somewhat easier feeling is manifest in most localities with the offerings practically on a par with the demand. Most of the hay is now stored and is being freely offered at former prices with storage charges added.
Alfalfa has been moving more actively than any other grade of hay with the demand strong and the balance slightly in sellers' favor. Prices are stronger both in San Francisco and throughout the country. Central California holders are disinclined to sell at the present market but large shipments are arriving from Nevada and a large part of the local and interior demand is now being filled by that state. Interior dairies seem to prefer small bales in which the Nevada hay is baled and are giving preference to that hay over the local product. At the close of the week the alfalfa market is strong with an upward tendency.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the markets in San Francisco (for prices to consumers, charges of switching, cartage, commission and handling expenses must be added, according to conditions).

Citrus Markets

Los Angeles, November 9, 1921.

The citrus shipping year ended with Monday, October 31. The grand total of citrus fruit shipments for the year is 60,116 carloads, according to the reports of the railroads. The Fruit Exchange makes it slightly greater than this number, possibly due to some shipments by water not reported by the rails. Valencias were practically cleaned up with the end of the year though there will be occasional scattering shipments. Kern County is earliest in the field with a picking gang. She is sweating in order to give color. The Navel season is thought to be rather behind last year this date.

Shipments 1920-1921

Shipments of citrus fruits to date since November 1, 1920, Southern California: Oranges, 41,330 cars; lemons, 11,584; total, 52,914. To same date last season: Oranges, 30,025; lemons, 8,733; total, 38,758. The year 1918-1919: Oranges, 35,436; lemons, 9,441; total, 45,177.
From Central California to date this season: Oranges, 6,676; lemons, 216; total, 6,892. To same date last season: Oranges, 5,391; lemons, 289; total, 5,680. The year 1918-1919: Oranges, 3,337; lemons, 264; total, 4,001.
From Northern California to date this season: Oranges, 305; lemons, 5; total, 310. To same date last season: Oranges, 261; lemons, 23; total, 284. The year 1918-1919: Oranges, 256; lemons, 5; total, 261.
This makes total shipments from California 48,311 cars oranges and grapefruit and 11,805 lemons.

Shipments This Year

Shipments of citrus fruits to date since November 1, 1921, Southern California: Oranges, 221 cars; lemons, 105; total, 326. To same date last season: Oranges, 87; lemons, 136; total, 223.

CALIFORNIA CATTLEMEN'S WEEKLY REPORT

San Francisco, November 7.

Receipts of cattle at Chicago during the past week were considerably lower than the previous week. This decrease was probably due to an accumulated supply on hand as a result of the threatened railroad strike. The receipts of cattle in San Francisco last week were about one-quarter of the usual number, for the same reason. The average price paid at Chicago during the past week showed a decline, but this should not be taken seriously, since it is a seasonal variation on that market. The Chicago market usually declines until the first of the year, at which time it normally picks up again. On the other hand, the Pacific Coast market usually improves from October 1 on until about April 1.
The San Francisco quotations have again increased a quarter of a cent, a price of 6½c f. o. b. yards San Francisco,

now being quoted.

Reports of sales continue to come to us of 6½c f. o. b. ranch for prime steers and a few extra choice lots have sold for as high as 7c f. o. b. ranch, in central California. Sales in the northern part of the state are for 5½c to 5¾c f. o. b. ranch.

Shipments of cattle continue to reach California from outside the state. Part of these are for immediate slaughter and part are feeder cattle. These cattle being brought into California are costing the packer as much, if not more, than is being paid California cattlemen. Cattle reported being bought outside the state for low prices are feeder cattle, and not for immediate slaughter.

All classes of cattle continue in great demand, feeder and stock cattle being exceedingly short.

Do not ship on consignment. Ship only f. o. b. ranch. We have a rising market! Beware of the speculative buyer who does not buy direct for a packing company. He is most active on a rising market. His profit belongs to you.—R. M. Hagen, Secretary.

POULTRY PRODUCERS MEET

Plans have just been completed for holding two meetings of the members of the Poultry Producers of Southern California, Inc., and others who may be interested in the cooperative marketing of poultry products. A banquet is to be served and a short program of entertainment will follow, after which we expect to have State Market Commissioner Maddox, also C. F. Stern, vice-president of the First National Bank of Los Angeles and who for several years past has been in close touch with all cooperative effort in this state, who will speak to us along cooperative lines.

The first meeting will be held at First Congregational Church, Seventh and Lemon Streets, Riverside, on Tuesday evening, November 15, the banquet to be served at 6:30 p. m., to be followed by the entertainment and speaking. The second meeting will come to Hotel Rosslyn, Fifth and Main streets, Los Angeles, on Thursday evening, November 17, the banquet to be served at 7 p. m., and followed by the entertainment and speaking.

If you have a neighbor who is not a member of our organization, and who should be with us, try and bring him with you or send his name and address that we may extend to him a special invitation.

Members who expect to attend either meeting and who can furnish transportation for one or more, please don't drive in with any empty seats; cooperate and bring a full load, members or non-members.

Committee: B. R. Holloway, H. R. Crum, W. S. Wheeler, Loring N. Kirk, J. H. Olsen, Leslie R. Gay, Dr. T. M. Cunningham.

A GREAT CITRUS YEAR

With anywhere from 50 to sometimes as high as 300 carloads of oranges going out of California every day in the year it is somewhat difficult to say when the "season" begins. The beginning of the shipping year, however, from the railroad men's standpoint is November 1, and reports of carload shipments as given on market page of this paper for many years have taken that date, so that we are now entering upon the new year.

For the year November 1, 1920, to October 31, 1921, the total shipments as reported by the railways aggregate 60,112 cars oranges, grapefruit and lemons. The Exchange reports slightly more than that, or 60,147 cars. As reported by the railways shipments are: Southern California, oranges 41,330, lemons 11,580. Central California, including Tulare, Fresno, Kern and other counties, 6,676 oranges, 216 lemons. Northern California, including Butte, Sacramento and others, 305 oranges, five lemons.

Commenting on the season's work Manager Powell of the Exchange reports:

During the year ended October 31, 1921, 48,350 carloads of oranges and grapefruit and 11,797 carloads of lemons, making an aggregate of 60,147 carloads of citrus fruits were shipped from California.

Members of the California Fruit Growers Exchange shipped for the same period 33,677 carloads of oranges and grapefruit, and 9,915 carloads of lemons, totaling 43,592 carloads, or 72.5 per cent of the citrus shipments from the state. In boxes this totaled 15,185,999 boxes of oranges, 204,106 boxes of grapefruit, and 4,175,239 boxes of lemons.

Returns for Exchange shipments f. o. b. cars California were $61,080,003.77, and based on these returns California received $83,537,344.22 for the season's citrus crop, the delivered value being $128,431,059.30 including $44,893,715.08 for freight and refrigeration. From investigations of jobbing and retail margins it is estimated that retail dealers paid $145,855,046.00 for the crop and consumers $203,642,100.00.

In a year characterized by many business failures and general financial stringency, the Exchange lost only $3,570.29 or 3/500 of one per cent. of the f. o. b. value of the fruit. During the past 18 years the returns to California through the Exchange have been approximately $443,000,000.00 and the total losses from all causes during this period have been $12,345.00 or 3/1000 of one per cent. of the f. o. b. returns.

Expressed in terms of boxes the Exchange shipments for the year ended October 31 were 15,185,999 boxes of oranges, 204,106 boxes of grapefruit, and 4,175,239 boxes of lemons.

BLISTER RUST THREATENS CALIFORNIA

The work of a fungus parasite that leads a dual life was seen by the foresters of 21 states at the annual meeting of the State Foresters Association held this year at Chestertown, New York, according to Merritt B. Pratt, California deputy state forester, who recently returned from a trip East, during which he attended the meeting. The white pine blister rust, a forest tree disease which is doing severe damage to the white pines in the eastern states, was the central topic of the conference. The fungus which causes this disease can harm the white pine only after a period of growth on currant or gooseberry leaves.

This disease has become prevalent throughout the New England states, New York and parts of Wisconsin and Minnesota, but has not yet been found on the Pacific Coast. Sugar pine is susceptible to the blister rust, and western foresters agree that should the disease become established in California it would speedily become the most serious forest tree pest in the state, not even excepting the destructive pine bark beetle which at present is doing considerable damage in the lumbering sections.

There are 62 different kinds of wild currants and gooseberries native to the Pacific Coast, and if the blister rust should gain a foothold in this region it would be very hard to combat on account of the difficulty of eradicating the currants and gooseberries which spread the disease.

A rigid quarantine against the shipment into California of white pine trees and currant and gooseberry bushes is being maintained by the state department of agriculture in cooperation with the state board of forestry to prevent the introduction of pine blister rust into the state. A federal quarantine prohibiting the shipment of nursery stock of this kind from eastern states west of the Mississippi River is a further protection. The state board of forestry, however, urges the cooperation of the people in protecting the California sugar pine by allowing no white pine trees or currant or gooseberry bushes to be shipped to them from outside the state.

The National County Agents Associational convention will be held at the Record Building, Union Stock Yards, Chicago, Illinois, on November 30,

LUTHER BURBANK
California's "Wizard of Horticulture"

"Finest Apple in All the World!"

—*Luther Barbank, California's "Wizard of Horticulture"*

"STARK Delicious trees from your nurseries have been growing on my place for years and never failed to produce a crop," writes Luther Burbank, California's Wizard of Horticulture. "As the trees grow larger they bear more, larger, better fruit."

"The Stark Delicious is correctly named. No other apple has the Delicious combination of the spicy fragrance and flavor of Stark Delicious. Furthermore, it keeps longer than any other good apple. **IT IS THE FINEST APPLE IN ALL THE WORLD.**" California farmers, orchardists and home owners are planting Stark Delicious, Stark's Golden Delicious and other noted Stark quality trees, like Jonathans, Stark King Davids, Stayman Winesaps, "Double-Life" Grimes Golden, etc. by thousands. Leading them all, however, is

Average Size Stark Delicious

Stark Delicious

Beat All Red Apple Records for Top Prices in 1921!

$12.00 and **more** per barrel is the price that California, Washington and Oregon growers got for their Stark Delicious **in the orchard** this year.

Stark Delicious growers in this section absolutely refused to sell any of their Stark Delicious apples unless the buyers took ALL their other varieties and paid record-breaking prices for every **variety** of apples in their orchards.

Stark Delicious has for years been the "dessert apple supreme" of all this country. It sells for even $ .25 and $ .50 each in San Francisco, Los Angeles, New York and Chicago fancy fruit stores—the "only apple that sells for a higher price than the finest oranges."

The trees that bear these wonderful apples are the trees that **helped make $1.25 per acre land now worth $1,500.00 to $2,000.00 per acre in the Northwest,** according to Hon. Franklin K. Lane, former U. S. Sec'y of Interior.

WRITE TODAY for your copy of the 1922 Edition "Prize Fruits & Trees" Book —NEW fruit pictures—NEW proofs of remarkable crops Stark Trees (especially Stark Delicious) bring to growers—NEW ways to get better fruit for home and commercial growers — and NEW, lower prices.

STARK'S GOLDEN DELICIOUS
Is Praised by University California Authority

Prof. J. C. Whitten, Prof. of Horticulture, University of California, writes:

"Have never eaten an apple coming out of storage this late (July 15th) which retained so fully its normal crisp, juicy, condition as Stark's Golden Delicious. It far outstrips Grimes Golden!"

This glorious apple is not only 50 to 85 per cent. larger than Grimes Golden, but immeasurably better in flavor. Its beautiful golden skin makes an instantaneous appeal to the eye and its marvelous flavor completely entrances the taste. The crisp, tender, creamy-yellow flesh is blessed with a spicy, aromatic flavor savoring of a particularly fine, perfectly ripe pear and is fairly saturated with exquisite golden honey juiciness. Furthermore the tree is an astonishing young and heavy bearer—

CALIFORNIA CULTIVATOR

and LIVESTOCK and DAIRY JOURNAL

Los Angeles — An Illustrated Weekly for the Rural Home and Ranch — San Francisco

Vol. LVII — November 19, 1921 — No. 21

THAT season has come when, alike in pursuance of a devout people's time honored custom and in grateful recognition of favoring national fortunes it is proper that the president should summon the nation to a day of devotion, of thanksgiving for blessings bestowed and of prayer for guidance in modes of life that may deserve continuance of divine favor.

Foremost among our blessings is the return of peace and the approach to normal ways again. The year has brought us again into relations of amity with all nations after a long period of struggle and turbulence. In thankfulness, therefore, we may well unite in the hope that Providence will vouchsafe approval to the things we have done, the aims which have guided us, the aspirations which have inspired us. We shall be prospered as we shall deserve prosperity, seeking not alone for the material things, but for those of the spirit, as well; earnestly trying to help others, asking, before all else, the privilege of service. As we render thanks anew for the exaltation which came to us, we may fittingly petition that moderation and wisdom shall be granted to rest upon all who are in authority in the tasks they must discharge. Their hands will be steadied, their purposes strengthened, in answer to our prayers.

Ours has been a favored nation in the bounty which God has bestowed upon it. The great trial of humanity, though we bore our part as well as we were able, left us comparatively little scarred. It is for us to recognize that we have been thus far favored, and when we gather at our altars to offer up thanks will do well to pledge, in humility and all sincerity, our purpose to prove deserving. We have been raised up and preserved in national power and consequence, as part of a plan whose wisdom we cannot question. Thus believing, we can do no less than hold our nation the willing instrument of the Providence which has so wonderfully favored us. Opportunity for very great service awaits us if we shall prove equal to it. Let our prayers be raised for direction in the right paths. Under God, our responsibility is great; to our own first, to all men afterward; to all mankind in God's own justice.

Now, therefore, I, Warren G. Harding, president of the United States, hereby designate Thursday, the twenty-fourth day of November, to be observed by the people as a day of thanksgiving, devotion and prayer; urging that at their hearthsides and their altars they will give thanks for all that has been rendered unto them, and will pray for a continuance of the divine fortune which has been showered so generously upon this nation.

In witness whereof I have hereunto set my hand and caused to be affixed the seal of the United States of America.

Done at the capital of the United States, this 31st day of October, in the year of Our Lord nineteen hundred and twenty-one, and of the independence of the United States the one hundred and forty-sixth.

[Signed:] WARREN G. HARDING.

By the President: CHARLES E. HUGHES,
Secretary of State.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

If among the more than 40,000 Cultivator's weekly circulation any fail to find any article they desire to purchase advertised in the Cultivator's columns, a special request is extended you to let your wants be known to the California Cultivator and we will place you in touch with proper parties.

EDITORIALETTES

The president of the United States makes appeal to all the people and urges that "at their hearthsides and their altars they will give thanks for all that has been rendered unto them, and will pray for a continuance of the Divine fortune which has been showered so generously on this nation." No day is more generally observed from Atlantic to Pacific than is Thanksgiving, and this year as the people make comparison of their lot and of conditions existing under the Stars and Stripes with those in almost every other part of the world, they will appreciate as never before their blessings.

* * *

No section of this whole blest country has more occasion for heartfelt thankfulness than California. Note the eloquence of some of the figures on the page opposite this. There may be seen figures with wonderful power to convince of California's greatness. Fifty of the highest producing counties of the United States are listed. More than a fourth of those 50 counties are located in California. Of the highest nine, six are in California, and of the highest four, three are Californian, and the place of honor for producing highest value of crops and livestock products is held by Los Angeles and Fresno Counties.

* * *

Speaking of great productions, California dried fruits are not always appreciated as they might be. For instance, 176,000 tons of raisins, one of our cured fruit products, means the labor of many thousands of hands on many thousands of acres. Other cured fruit products are the wastes of our apple orchards, 5,500 tons; apricots, 9,500 tons; figs, 12,300; peaches, 26,000; pears, 2,700; prunes, 97,500; raisins—and more accurately than the figures given above, 176,870; a total of cured fruits of 330,370 tons. The above are from figures gathered by the California Fruit News.

* * *

It is also worth while for us to consider not only our own blessings with thankfulness, but the "opportunity for very great service awaiting us if we shall prove equal to it." And America will prove—has proved—equal to the occasion of lending a hand to all the world, and through the Red Cross, Near East Relief, and other activities, opportunity at this Thanksgiving and Christmas time will be availed of.

A CALL TO THE SOUTHWEST

The League of the Southwest through its secretary-treasurer, Arnold Kruckman, is issuing a call to all the Southwest to send representatives to a great meeting to be held at Riverside, December 8, 9 and 10.

Quoting from its constitution the League is:

"A non-political alliance between the states of Arizona, California, Colorado, Nevada, New Mexico, Oklahoma, Texas and Utah to foster closer social and commercial relations and to link the communities of the Southwest in a spirit of brotherhood and the promotion of the civic, commercial and social interests of the territory."

Convention headquarters is Mission Inn, Riverside.

Here is the call:

Discussion through the Southwest has evolved so many new and conflicting angles in the consideration of the project to develop the resources of the Colorado river that it is believed the complex situation may best be clarified by a meeting of all elements at interest.

The members of the League of the Southwest therefore have ordered that a special meeting be called for the sole and express purpose of considering the present status of the project to develop the Colorado river resources. By an overwhelming vote of the membership Riverside was chosen as the place of meeting. The meeting is therefore called at Riverside on December 8, 9 and 10, 1921.

Since public thought has focused upon the proposal to build a dam in Boulder Canyon and the government's investigations have crystallized in an unpublished report prepared by Director Davis of the U. S. reclamation service (in obedience to the terms of the Kinkaid Act) this document will necessarily be an important topic of discussion. It is assumed that Secretary of the Interior Fall, as well as Director Davis, will be present to ascertain the sentiments of the people of the Southwest and give the meeting the benefit of their counsel.

The Interstate Colorado River Commission, which came into being as a result of the activities of the League of the Southwest and was created by the joint action of the federal government and the several states in the Colorado River Basin is expected to have its initial meeting concurrently.

Aside from the governors and other notable men and women of the Southwest it is anticipated distinguished persons from various branches of the federal government, as well as other eminent persons representing influential factors in the nation, will participate in the program.

This call is addressed to all constituent members of the League of the Southwest and to all other organizations in the states embraced in the League of the Southwest.

Your organization is earnestly and strongly urged to be fully and adequately represented by a large delegation at this meeting which will consider problems immediate and vital to the prosperity, welfare and future of your community.

COOPERATIVE MARKETING

The census bureau has given California some wonderfully interesting figures, but for once we have just a bit of a grouch. This is because of the report of the bureau on cooperative marketing and purchasing. According to that report of California's 117,670 farms there are only 25,772 reported as marketing their products through farmers' organizations, and many other states make a far better showing in this particular. For instance, Minnesota reports 78,314 farms marketing through cooperative organizations. Now then, we who live in California and know of the 12,000 or 15,000 citrus growers, 13,000 or 14,000 raisin growers, 7,000 peach and fig growers, 3,000 or 4,000 almond growers, 7,000, or possibly 10,000 prune growers, besides walnut growers, milk producers, poultry raisers, bean growers, pear growers, potato growers, alfalfa growers, and growers of almost every one of our products, which are largely marketed through cooperation, and we cannot help but feel that many farmers in filling out their blanks failed to report the fact that their products were moving through cooperative organizations. Of course we realize that some of these producers may market through two or even more associations, for instance, many members of the walnut growers' association are likewise members of the citrus growers' association, and this in the census would only count as one farm reporting, but even this consideration does not explain wherein California only has 21.9 per cent of her farms reported as marketing cooperatively.

But even in this report California is a star of the first magnitude in value of products marketed cooperatively. The value of productions of this state marketed through cooperative organizations is $127,990,981, and the next state, which falls far below us, is Minnesota, the first state as to number of farms cooperatively marketing, with $82,760,459.

Cooperative purchasing has not proved as popular in any of the states as has cooperative marketing. Only five states of the Union report the purchasing of over $4,000,000 worth of products cooperatively. These are Kansas, Nebraska, Iowa Minnesota and California, ranking in the order named.

SANDING THE MANURE

We used to hear of the grocer sanding the sugar in order to increase the profits and help pay rent, but sanding manure is a new one. Back in the grain growing days California manure piles were considered a source of expense and a great nuisance. Many a barnyard was relieved of its burden and soft dirt roadways made more travellable by hauling strawy material, and distributing over them. The benefit was hardly sufficient to cover the cost, yet the stuff had to be disposed of. Today it is different, and every scrap is gathered together and shipped from the city to the orchardist, who is paying long prices. The worth of a carload is gauged by its weight, or, in other words, it is sold by the ton, and a stream of water played over a load of manure before placing it aboard a train adds very nicely to the profits of the manure vender. In time of drouth a few loads of sand answer fully as well, and the buyer, who is Mr. Orchardist, is none the wiser, though considerably the poorer. T. M. Pierce of the state department of agriculture, has been doing some gum-shoe work, and has caught red-handed several middlemen in the manure business. In this campaign he has been aided by the Los Angeles police and has had quite a thrilling experience in bringing to justice a bunch of criminals. Good stiff fines have been imposed upon these law violators.

MORE COOPERATION

Californians were never offered such opportunity for benefiting themselves as today. This state is greatly blessed in its opportunities for conservation of water and hydro-electric power, but all these years the opportunity has not been taken advantage of and waste, and even disaster, has come. Today from one end of the state to the other producers are asking why are we not using this power and at a cost which is not prohibitive. Horace Porter, mayor of Riverside, is dealing some sledge hammer blows in the campaign for securing this power by the people and for the people. In an address recently made at Claremont he said:

"We must have cheap power for the farm and ranch. It is demanded there I think more insistently than anywhere else. For on the farm and ranch the home cares are the heaviest, and life holds the most drudgery. But I specially think of the California rancher, the man who produces our food and the prime necessities of life, on whom we are all absolutely dependent for life itself, the California rancher, who must so often have power to lift the waters from the deep well to supply every acre of corn or alfalfa or orchard; power to pump water for home and for thirsty cattle; power, cheap power, is his first necessity. And yet so short-sighted and suicidal are the private power companies of California that they are putting the power prices up and up for the rancher until he cannot pay his power bills. He cannot water his fields; he cannot water his cattle; his home returns to the desert for lack of cheap power."

DISARMAMENT

There is yet no excess of plowshares because of discarded armaments, but there is a great hope in the heart of the world that steps have been taken at Washington which may be considered the initial ones for the ending of world war. The endorsement given by three great powers to the Hughes plan has received world wide approbation. Let us all hope and pray that these days of great opportunity between Armistice Day and Thanksgiving of 1921 may give new meaning to the observation of those days to all the world for all time to come.

California Cultivator

Vol. LVII, No. 21 | Los Angeles, November 19, 1921 | One Dollar Yearly

California Counties Lead in Agricultural Crop Values

OF THE 50 leading agricultural counties in the United States, as shown by the 1920 census, California has 13, and the best of it is the two highest of all are likewise California counties. The Cultivator takes satisfaction in the fact that in its issue of April 2 it gave advance information made possible by preliminary figures given out by the bureau of the census. The table printed at that time gave probable ranking of the various counties, with Los Angeles first and Lancaster County, Pennsylvania, second. As will be noted in the table below, Fresno County now comes second, and in the first ten of the counties of the United States California has five, or one-half, namely, Los Angeles, Fresno, San Joaquin, Tulare, Sonoma, and in the highest 50 counties in the United States California has 13.

California has been accused of both boosting and boasting, but are not these figures given out by the bureau of the census justification for a very great pride in our own state? Also notice in the list below the great proportion of high producing counties which are on the Pacific Coast or in the far West. These figures include not only crops but, as well, all livestock products, and coming, as this announcement does, at our harvest and Thanksgiving season concretely shows the result of effort and of vision in using the opportunities placed before us. California, the West, the Union has in this report much to be thankful for.

The comment of the department of commerce, through its bureau of the census in giving out these figures, is as follows:

The census bureau has determined the rank of the 50 counties in the United States leading in the combined value of farm crops and livestock products in 1919. The livestock products include dairy products, chickens and eggs, honey and wax, wool and mohair, but not domestic animals sold and slaughtered. There is some duplication, to be sure, when the value of crops and the value of livestock products are included in the same total, by reason of the fact that a large part of the livestock products are derived from the feeding of farm crops to farm livestock. This combined value, however, appears to offer the best available index of the counties' agricultural production.

The 50 leading agricultural counties were distributed among the several states as follows: California, 13; New York, 7; Illinois, 5; Texas, 4; Pennsylvania, 4; South Carolina, 4; North Carolina, 3; Washington, 2; Wisconsin, 2; and 1 each for Arizona, Colorado, Connecticut, Maine, Minnesota, and Mississippi.

Los Angeles County ranked first among all counties in the United States in the combined value of crops and livestock products in 1919, the total value amounting to $71,579,899. The value of crops in this county was $61,864,479, which was greater than the combined value of crops and livestock products in any other county. Oranges contributed slightly more than one-third of the combined value of crops and livestock products in this county. Other important items were lemons, walnuts, and hay and forage.

Fresno County ranked second among all counties, with a value of $55,110,101 for crops and livestock products, and stood third in the value of crops alone, with $51,861,252. Grapes made up a little more than one-half of the combined value of crops and livestock products, with peaches and hay and forage following in order.

Aroostook County, Maine, stood third in the combined value of crops and livestock products, with $54,376,256, and was second in value of crops, with $52,541,205. Potatoes comprised about four-fifths of the combined value in this county, while hay and forage was the next item in importance as regards value.

San Joaquin County ranked fourth, with a combined value of $41,191,240 for crops and livestock products and also stood fourth in the value of crops, with $37,956,866. Potatoes, grapes, barley and hay and forage were the leading items from the standpoint of value.

Lancaster County, Pennsylvania, was fifth in rank, with $40,776,212 representing the value of crops and livestock products. Tobacco, corn, hay and forage, and wheat were the most important items, in the order named.

Yakima County, Washington, stood sixth in value of crop and livestock products, with $34,741,710. Apples and hay and forage were the leading items as regards value.

Other counties, with their rank according to the combined value of crops and livestock products in 1919, were as follows: Tulare County, seventh, with $34,036,167; Sonoma County, eighth, with $32,300,623; Whitman County, Washington, ninth, with $31,921,047; and Dane County, Wisconsin, tenth, with $29,395,753.

The 50 counties whose rank in the combined value of crops and livestock products has been determined are shown in the following table:

* * *

As noted above, the figures already given have to do with the production in certain counties of California for the 12 months preceding January 1, 1920, and not including livestock slaughtered and sold. Therefore, just a word as to the wealth of our state in livestock. There were in California, January, 1920, 99,661 farms reporting livestock of a value of over $200,000,000. Of horses there were 402,407, mules 63,419, sheep 2,400,151, goats 115,759, swine 909,272.

The number of "dairy cows," including heifers one year old and over, was 613,958, as compared with 467,332 "cows kept for milk" reported for April 15, 1910. This represents an increase of 146,626, or 31.4 per cent. The number of "beef cows" reported for January 1, 1920, was 575,279, as compared with 576,909 "cows not kept for milk" reported for April 15, 1910, representing a decrease of 1,630, or 0.3 per cent.

County and State	Value of Crops and Livestock Products Rank	Value of Crops and Livestock Products Amount	Value of Crops Rank	Value of Crops Amount	Principal Products
Los Angeles, Calif.	1	$71,579,899	1	$61,864,479	Oranges, lemons, hay and forage, walnuts.
Fresno, Calif.	2	55,110,101	3	51,861,252	Grapes, peaches, hay and forage, dairy products.
Aroostook, Me.	3	54,376,256	2	52,541,205	Potatoes, hay and forage, oats, dairy products.
San Joaquin, Calif.	4	41,191,240	4	37,956,866	Potatoes, grapes, barley, hay and forage.
Lancaster, Pa.	5	40,776,212	5	32,191,536	Tobacco, corn, hay and forage, wheat.
Yakima, Wash.	6	34,741,710	6	32,458,658	Apples, hay and forage, potatoes, peaches.
Tulare, Calif.	7	34,036,167	8	30,547,341	Grapes, oranges, hay and forage, dairy products.
Sonoma, Calif.	8	32,300,623	42	17,477,370	Eggs and chickens, plums and prunes, apples, grapes.
Whitman, Wash.	9	31,921,047	7	30,824,407	Wheat, hay and forage, oats, barley.
Dane, Wis.	10	29,395,753	25	20,978,957	Dairy products, hay and forage, corn, oats.
McLean, Ill.	11	29,161,454	9	26,938,018	Corn, oats, wheat, hay and forage.
San Bernardino, Calif.	12	27,957,448	10	26,517,455	Oranges, lemons, grapes, hay and forage.
Maricopa, Ariz.	13	26,819,662	12	24,054,416	Cotton, hay and forage, dairy products, wheat.
St. Lawrence, N. Y.	14	26,809,540	108	13,582,476	Dairy products, hay and forage, potatoes.
Orange, Calif.	15	26,635,748	11	25,572,032	Oranges, walnuts, lemons, sugar beets.
York, Pa.	16	26,600,746	26	20,953,838	Corn, wheat, hay and forage, eggs and chickens.
Santa Clara, Calif.	17	26,135,980	14	23,792,684	Plums and prunes, apricots, hay and forage, dairy products.
La Salle, Ill.	18	25,828,420	15	23,604,661	Corn, oats, wheat, hay and forage.
Champaign, Ill.	19	25,619,290	13	23,800,535	Corn, oats, wheat, hay and forage.
Livingston, Ill.	20	24,153,905	19	22,199,150	Corn, oats, eggs and chickens, wheat.
Bolivar, Miss.	21	23,703,571	16	23,114,901	Cotton, corn.
Iroquois, Ill.	22	23,627,284	22	21,474,008	Corn, oats, eggs and chickens, wheat.
Anderson, S. C.	23	23,528,158	20	22,012,165	Cotton, corn.
Orangeburg, S. C.	24	23,427,879	18	22,904,976	Cotton, corn.
Robeson, N. C.	25	23,389,828	17	22,955,950	Cotton, tobacco, corn.
Weld, Colo.	26	23,203,475	23	21,198,360	Sugar beets, hay and forage, wheat, potatoes.
Dodge, Wis.	27	23,049,660	90	14,331,352	Dairy products, hay and forage, oats, corn.
Stanislaus, Calif.	28	22,758,641	47	17,140,414	Hay and forage, dairy products, barley, wheat.
Hartford, Conn.	29	22,751,488	35	18,779,160	Tobacco, dairy products, hay and forage, corn.
Williamson, Tex.	30	22,324,436	21	21,500,490	Cotton, corn, oats, hay and forage.
Chautauqua, N. Y.	31	22,316,250	74	14,983,214	Dairy products, hay and forage, grapes, eggs and chickens.
Chester, Pa.	32	22,261,956	83	14,567,299	Dairy products, corn, hay and forage, wheat.
Sacramento, Calif.	33	21,981,958	27	19,845,858	Dry beans, wheat, hay and forage, grapes.
Pitt, N. C.	34	21,486,117	24	21,052,441	Tobacco, cotton, corn.
Otter Tail, Minn.	35	21,474,949	41	17,568,127	Wheat, hay and forage, dairy products, potatoes.
Berks, Pa.	36	21,447,279	71	15,232,909	Corn, dairy products, hay and forage, potatoes.
Erie, N. Y.	37	21,294,818	87	14,443,343	Dairy products, hay and forage, potatoes, eggs and chickens.
Spartanburg, S. C.	38	20,887,542	28	19,556,658	Cotton, corn.
Ellis, Tex.	39	20,375,681	29	19,262,474	Cotton, corn, oats, wheat.
Riverside, Calif.	40	20,253,304	33	18,934,265	Oranges, cotton, hay and forage, lemons.
Imperial, Calif.	41	20,195,367	46	17,200,734	Cotton, kafir, milo, etc., hay and forage, dairy products.
Fannin, Tex.	42	20,163,821	30	19,246,092	Cotton, corn, oats, wheat.
Steuben, N. Y.	43	19,938,904	77	14,805,641	Hay and forage, potatoes, dairy products, oats.
Jefferson, N. Y.	44	19,918,631	239	10,694,423	Dairy products, hay and forage, oats.
Johnston, N. C.	45	19,812,510	31	19,229,785	Cotton, tobacco, corn, sweet potatoes.
Delaware, N. Y.	46	19,832,943	....	7,972,256	Dairy products, hay and forage.
Marlboro, S. C.	47	19,419,921	32	19,136,190	Cotton, corn.
Onondaga, N. Y.	48	19,395,595	97	14,112,780	Hay and forage, dairy products, potatoes, eggs and chickens.
Lamar, Tex.	49	19,305,636	36	18,270,287	Cotton, corn, hay and forage.
Ventura, Calif.	50	19,160,414	34	18,829,031	Dry beans, walnuts, lemons, oranges.

Agricultural News Notes of the Pacific Coast

Northern California

The Butte County farm bureau has started its membership drive.

Tehama County's farm bureau is conducting a membership drive.

The University of Califonia reports securing over $900,000 in its stadium campaign.

One car Alicante wine grapes shipped from Lodi by the Exchange brought $4282.

A Thanksgiving song festival will be held at the state armory at Sacramento November 22.

The state university will give short courses in tractor operation at 14 localities throughout the state.

Logged-off lands about Susanville Lassen County, are being found well adapted to apple growing.

The women of several towns in Glenn County have organized a "buy a tree" campaign, the trees to be used in planting county highways.

Potato growers in the Delta district have received another 25 cent advance in wholesale prices. A large per cent of the crop is going into storage.

A series of meetings is being held in Sonoma County by the farm bureau poultry department to explain working plan of the accredited hatchery list.

The quail season in Del Norte, Humboldt and Siskiyou Counties will close on December 15, while elsewhere in the state it will close on January 15.

Four hundred bales of hops sold last week at 25 cents. This is below recent sales but growers who have not contracted their crops feel sure of an increase in price soon.

The Sonoma County Grange will hold a special session the last Monday in December at which it hopes to have present members of the National Grange who have come down from the Portland meeting.

Forty of the 54 Japanese language schools already established in California are distributed among the northern and central counties of the state, as compared with 14 in the southern counties.

Officers of the Placer County Growers Canning Association are: W. F. Kelps, San Francisco, president; Dana Perkins, Rocklin, vice president; J. A. Gray, Roseville; E. G. Sprinda, Cool; C. B. Freed, Newcastle, directors.

The California Canning Peach Growers was formally organized at Stockton, November 1. This is an outgrowth of the activities of the Sutter Peach Growers. A state wide membership campaign is now being carried on in all peach growing districts.

O. E. Squires of Willows and H. S. Brink of Biggs were appointed as representatives of the Rice Growers Association of California to confer with the University of California on survey of rice conditions in the state for which the last legislature appropiated $10,000.

The Susanville chamber of commerce announces that surveys are to be made at once of the Long Valley project in Lassen County. It is claimed that waters diverted from the Little Truckee river will make possible irrigation of 25,000 acres of productive land.

Central California

Lindsay, Tulare County, expects an orange crop much heavier than last year's.

The Exeter district will ship 400 to 450 cars of Emperor grapes this season.

A large acreage will be planted to lettuce this winter in the Delano section of Kern County.

The Tulare board of trade has selected space at the Visalia citrus fair to be held next month.

Lindsay, Tulare County, will ship about 60 carloads of pomegranates; other sections of the county about the same quantity.

Four hundred head of feeder cattle were received from Nevada last week by Charles Kassabaum of Waterford, Stanislaus County.

The senate agricultural bloc in conference October 31 decided that a 3 cent tariff on beans should be included in the permanent tariff.

Hog auction sales in Kern County will be held at Bakersfield, November 19; McFarland, 25; Wasco, December 3; Bakersfield, 17; McFarland, 23.

Directors of the California Bean Growers in the Stockton-Modesto district are: J. A. Aggler, Stockton; J. G. Berryhill, Modesto; I. L. Borden, Stockton.

The rate on beans by river boat from Stockton and Sacramento to San Francisco has been reduced by the railroad commission from $1.87 to $1.60 per 100.

Members of the California Peach and Fig Growers have received final payments for the 1920 crop. This settlement was for figs received from growers in February.

Officers of the California Bean Growers are: J. W. Mendenhall, president; I. L. Borden, vice-president; Clinton L. Danly, secretary-treasurer; Robert H. Frazer, manager.

The peach crop of Sanislaus County ran about 30,000 tons, of which half was canned at Modesto and Turlock, 10,000 tons at other canneries and 5,000 tons shipped to Eastern markets.

Practically all the beans are harvested in the Hughson district of Sanislaus County. Dry weather has made it possible to put practically the entire crop in warehouse in perfect condition.

There has been such brisk demand for the one pound cartons of raisins that the association is putting up a second lot in addition to the quantity that was considered sufficient at the beginning of the season.

President Mendenhall of the California Bean Growers in commenting on the coming year's business said that the management had made connection with at least 360 selling agencies throughout the country.

At a special meeting of the board of directors of the California Bean Growers on October 29 it was decided that sufficient beans of the 1921 crop had been secured to warrant continuance of the association's activities.

Lindsay citrus growers met last week to discuss shipping their fruit through the Panama Canal. Vice-president Whitcomb of the California Fruit Growers Exchange explained the plan now being followed by the southern growers.

Southern California

Imperial Valley farmers are planning a series of tests of various varieties of barley.

The fruit exchange at Orange is to build a $20,000 office building.

Los Angeles county farm bureau is conducting a membership drive.

Ventura County Walnut Growers reports all walnuts harvested and sold.

Ventura County sugar beet growers have figured the total production cost per acre $57.53.

Riverside beekeepers have voted almost unanimously in favor of cooperative marketing.

Beekeepers of Southern California will meet at Exposition Building, Los Angeles, December 5-10.

Fullerton packing house closed the season with 850 cars of citrus fruit shipped out this season.

Members of the Orange County farm bureau are planning erection of cold storage plant at Tustin.

More than 2,000 bales of cotton of the 1921 crop have been handled by gins in the Palo Verde Valley.

The state highway commission is calling for bids on a $50,000 highway near Garden Grove, Orange County.

Southern California was given some of the hottest October days which have been experienced for 21 years.

The San Dimas Lemon Association recently held its 21st annual meeting with banquet and review of last year's business.

Walnut growers have estimated that at least 25 per cent of the output of their orchards could be shipped by the way of the Panama Canal.

The Orange County Poultry Association, organized many years ago but not functioning for the last two years, is being reorganized and will stage a show some time in December.

San Fernando Valley is contracting to raise pickles for the Heinz Company. Some cucumber growers in the Compton district, Los Angeles County, secured as high as $400 per acre last year.

Coachella Valley Grape Growers Association has filed bylaws and organized a new association. The directors are: C. R. Cawthorn, O. Geissler, C. W. Hude, secretary; C. R. Patterson, Hugh W. Proctor and A. O. Hayward.

In many counties the last day for making payment of fall taxes before delinquency is the last Monday in November. In others it is the first Monday of December. There may be still other delinquency dates but don't pay penalty.

At the last meeting of the Ventura County farm bureau Adviser Staunton set before members figures he has collected from beet growers as to exact cost of all cultural operations the past year. The conclusion of the attendants was that either there should be more tonnage per acre or more pay per acre.

A warrant charging violation of the state motor vehicle act in exceeding the speed limit allowed trucks has been sworn to by Charles A. Whitmore, state highway commissioner, against the drivers of the Hodge Transportation Company of Los Angeles and is the first action of the kind ever taken by the state highway commission.

The Coast and General

Michigan's bean crop is a million bushels short of last year's.

Texas reports ideal harvesting season, being both warm and dry.

Operation of the emergency tariff has been extended to February 1, 1922.

Warehouses in Walla Walla County, Washington, are well filled with wheat awaiting shipment.

Beekeepers of Yakima, Washington, say that they have experienced heavy losses from spraying of fruit trees.

The irrigation district at Medford, Oregon, will soon be completed and water will be put on 14,000 acres.

Pacific County, Washington, has harvested over 20,000 boxes of cranberries. Practically all the crop has been shipped.

There are few arrivals of Oriental beans at Seattle. Local importers are buying only on orders and in small quantities at that.

Sheep are being brought down from the mountain ranges near Flagstaff, Arizona, and driven to the southern grazing grounds.

Wasco County, Oregon, expects to ship 275,000 packed boxes of apples. A very large percentage are running large and well colored.

The Interstate Fair at Prineville, Oregon, especially featured livestock exhibits though everything that grows on the farm was shown.

Thirty-three states have representatives at the 55th annual of the National Grange which is in session at Portland, Oregon, November 16-25.

The Colorado Pinto bean crop came in several weeks ahead of usual maturity due to early planting and favorable weather. There is no carryover from last year.

New Mexico bean growers report their Pintos being shipped to all parts of the United States and growing in popularity steadily. This year's quality is highest in years.

The Western Royal Livestock Show at Spokane, Washington, was held the week preceding the Pacific International at Portland and brought out some 3,000 head of livestock.

Oregon raises practically no beans, the bulk of its requirements being supplied by California. In order of amount consumed varieties bought are: Small Whites, Limas, Pinks, Bayos, Red Mexicans.

The state of Washington now holds first place of all the states in the union in the production of apples. It now claims a production of 6,543,000 barrels. Her nearest competitor is New York with 3,307 barrels.

There is a contest on between the milk producers of Spokane and the distributors because of the distributors endeavoring to raise the price of milk to the consumer from 10 to 13 cents a quart. Producers are uniting with the consumers in the fight.

Prof. J. W. Gilmore of the University of California, now exchange professor at University of Santiago, Chile, writes of two new beans that he has found, one of which is grown among the Indians of Chile, and the other suitable for higher elevations. He is collecting samples of all beans grown in Chile, and expects that some of them will prove to be better than those we already have in California.

Topworking Citrus Trees

By Robert W. Hodgson

With every period of depression in the citrus industry there comes the inevitable revival of interest on the part of growers in the practice of topworking. Perhaps the best testimony to the fact that periods of low prices in the citrus industry have alternated with seasons of prosperity from the very beginning is that bearing citrus orchards not yet 30 years of age have been topworked four times. Much interest is being manifested in topworking through the campaign launched by the agricultural extension service in Los Angeles County for the elimination of drone trees as a means of reducing production costs in the face of price declines of the past two years. It is estimated that approximately one tree out of four in the citrus orchards of California does not pay for its keep, and elimination of this source of waste must be expected to materially affect the profit side of the ledger.

Are Topworked Trees Successful?

In certain sections the question of the success of topworking bearing trees is under some discussion, there being some growers who are inclined to doubt the success of budding over old trees. These point out certain orchards which were topworked years ago and which are now yellow and unhealthy in appearance and failing in yield. Those holding the other point of view have little difficulty in finding similar topworked orchards which are today in most excellent condition and bearing heavily. Indeed it would seem that the weight of evidence were with the latter, although it must be admitted that in certain districts the majority of the topworked orchards are going back.

There seems to be no reason why topworked trees should not be as satisfactory in every way as those not topworked. The fact is that all citrus trees planted today in California are topworked in the nursery row. Topworking bearing trees is in no essential different from budding nursery trees. And the fact is that the majority of the old topworked orchards are doing quite satisfactorily. In fact, one of the orchards above referred to as topworked four times is counted among the most profitable in its district and is in splendid condition of thrift and vigor.

Close examination of those orchards where, after a period of years, topworking is claimed to be unsatisfactory, in almost every instance will uncover the fact that the work was not properly followed up. Large stubs were left where the old branches were cut off, which failed to heal over on account of being improperly made or poorly sealed. The result is heart rot in the interior of the tree, with inevitable decline. The products of decay, unable to gain outlet, are absorbed by the growing layer of the tree and, like an abscessed tooth, are certain to cause trouble. Gumming, yellowing and die-back follow in slow progression with the final result that the tree is worthless. On the other hand the writer has yet to find a case where the work of budding was properly followed up—all stubs sloped off to the growing buds the year following the work and all wounds sealed and kept sealed until entirely healed over—where anything but satisfactory results followed the topworking.

Methods Used

There are a number of methods of working over bearing trees in common use, all of which can be classified under two general methods, inserting the buds under the bark on the older branches or cutting the trees back and growing new shoots which are then budded in exactly the same manner in which nursery stock is budded, namely, shield budding.

The former method is perhaps that in most general use at the present time for topworking and is used in the recent series of topworking demonstrations in Los Angeles County, held by the agricultural extension service in cooperation with C. S. Milliken of the Fruit Growers Supply Company. Inserting the buds into the old bark may be done at any time when the sap is flowing freely and the bark lifting well. Perhaps the best months for this method of topworking are August and September. Buds inserted at this time set and heal in well before active sap flow ceases, and remain dormant and safe from frost injury through the winter period. The branches in which the buds were placed should be cut back to a point 8 to 15 inches beyond the buds in early March. The buds are thus forced into growth and get the full benefit of early spring growth, the result being a large top before the coming of cool weather in the fall.

If budding is delayed until the bark lifts in early spring there is a loss of six weeks to two months of the season's growth which results in just that much smaller top to go through the possible cold weather of the next winter.

The technique of topworking by this method is relatively simple. The first thing is to select the branches to be budded and the place where the buds should be inserted. Many budders make the mistake of putting in too many buds and of budding too many branches. Five to six framework branches are ample for any citrus tree, and these should not average more than two buds to the limb. Two to the limb are generally inserted as a means of making certain that one has enough buds for the head of the tree. If the top is made from five buds, one to each scaffold branch, usually the result will be better than if the top is formed from twice that number.

Another common mistake made is in inserting the buds too far out from the main crotch. They should be placed not more than two feet from the crotch and with small or even average sized trees closer than this.

After cutting out those branches into which no buds are to be inserted and selecting the place for inserting the buds it is a good practice to lightly scrape the bark where the bud is to be placed, using the back of the knife blade. This accomplishes two things; it thins the bark and makes it easier to handle, and it cleans it off so that the cut surface of the bud is not fouled with dirt as it is being inserted.

An inverted T cut is then made, taking care not to make the cross cut too deep, not deeepr than just through the bark. The bark is now gently raised, either with a special bone instrument or with the cut end of the bud stock. Unless this is done it is exceedingly difficult to insert the buds, especially where the trees are old and the bark thick. The bud is now carefully cut from the bud stick, taking care to make it reasonably large and taking considerable wood with it. It is then inserted in the cut and pushed into place, using the shoulder made by the leaf petiole. It should be pushed well up into place. The bud should now be thoroughly covered over, using waxed cloth, beginning at the lower end and winding upward. This insures shedding of water. The limb should be bound tightly so as to hold the bud firmly in place in order that early union between the two cambium layers may occur. The waxed cloth may be tied at the top, or a simpler and easier method is holding the end by means of a tack. An effort should be made to place the buds on the inner sides of the branches where possible. A much better union results and the bud is much less apt to break out than if placed on the outside. This is frequently not possible, however, because of the thinness of the bark on the upper sides of the branches and inability to raise it from the wood.

In from three to six weeks after inserting the buds, depending upon weather conditions, the waxed cloth is unwrapped and the buds examined. If the work has been done well the buds should have healed in well and a thorough union resulted. If spring budding has been done the branches are now cut back and the buds forced into growth; if fall budding, they are allowed to remain dormant over the winter.

There are some differences in practice among successful budders but merely in matters of detail. Some cut the bud from the bone and some from below, some insert them from above and some from below, all however inserting them right side up. Some cover the entire bud with the waxed cloth, others leave the eye exposed. All agree, however, that the essentials are a sharp knife, clean work, good buds, and firm wrapping.

Where the second method is used it is usually impossible to select new growth large enough for budding before late June or early July. The safest procedure is to insert buds into this growth but encouraging them to remain dormant by not cutting the branches back until the following spring. From two to three of the best shoots per limb and properly spaced should be budded, it being understood that either one or two should be cut away after the first season's growth, leaving the top eventually formed of not more than eight or ten buds. In this method ordinary nursery budding practice is used and waxed cloth is not necessary for success, budding twine being sufficient.

By the use of either method it is possible to topwork citrus trees so that at the end of four years the tree is again in good bearing and practically as large as at the time of the operation. Of course it goes without saying that only the best selected bud wood should be used, else the trouble of topworking is all in vain.

Bean Association Will Continue

At a special meeting of the board of directors, Saturday, October 29, it was unanimously decided that sufficient beans of the 1921 crop had been secured to warrant the continuance of the association.

In commenting upon the decision of the directors to carry on the work of the association, which was begun a little more than three years ago, President Mendenhall said, in part:

In making this decision to continue the association, I am firmly of the opinion that we, as bean growers, have done the only thing possible if we expect to make bean growing a profitable industry.

I do not believe the average bean grower realizes or appreciates the tremendous amount of work that has been accomplished during the past three years nor the handicaps with which the association has been confronted during that period. You, as directors, are fully aware of the conditions that have faced us, many of which have and are being overcome, until today the association stands as a tangible, strong, working, cooperative organization and is now in a position to give to its members the service which has always been its objective.

The history of the association to date may be briefly summed up under three heads; formative, constructive and objective. During its formative period the association faced unusual conditions, discouragements and handicaps; the World War, overproduction and damaged crops. However, despite all of this we have definitely accomplished something worth while.

We have sold the crops, perfected an accounting system and made sales connections; arranged to finance the crop whereby we can take care of our members.

By our financing system, members are not compelled to dispose of the crop at harvest time to speculative interests which reap the benefits which rightfully should be enjoyed by the grower. Previous to this, 75 per cent of the bean crop was out of the hands of the grower within 60 or 90 days after threshing and at a period when prices are lowest.

The association secured, through its tariff committee, an emergency tariff of two cents, and word has just been received from Washington that our Western senators have pledged themselves to demand a three cent tariff on Oriental beans. Even though we had only accomplished this latter thing the association has been of great value to the growers.

To do all of these things has taken time and money. No organization is built in a day, a month or a year. It is only through a process of careful elimination, of learning by actual experience, that a smoothly functioning business of any character can be erected, and the association has now reached that condition.

Now that we have passed through the formative and constructive periods the association is ready to put into execution those plans which it is absolutely necessary to carry out if bean growing in California is to be made profitable.

California consumes but a small per-

centage of the beans it produces. They go into the markets of the Middle West, East and South. It has been absolutely necessary to make selling connections in all of the distributing centers in order to find an outlet for the crops. These connections have been made, some 360 of them.

This was all constructive work and took time. The individual grower could not have done this and would be forced to sell his crop through channels largely speculative, without knowledge of prices, market conditions or supply and demand, accepting what the buyer offered. By means of the association's selling organization he is protected by the information it has of when, where and at what price beans may be sold. He has at his command the aggregate knowledge and definite, valuable information gathered from every section of the country.

California beans are in competition with those of five other producing states, all closer to the consuming centers, which demand the highest grades. Therefore California beans must be standardized and standardization can only be accomplished by means of organization. This is another of the vital things the association is prepared to do. It has established a constantly increasing demand for California beans, but to keep that trade the product must be standardized and have the backing of a responsible seller. The buyer in New York, Boston, Chicago or elsewhere does not know the individual grower, but he does know the association, its standing and responsibility, and also knows that when he receives a car of association beans they are of a standard quality and, therefore, has no hesitancy in offering them to the trade and receives the highest market price, which means that the grower also profits accordingly.

It is only through concerted, organized cooperative effort that we can increase consumption of beans by means of publicity as to their uses. Every time consumption is increased one sack, the grower benefits proportionately. The individual grower is unable to do this, but collectively he can.

The association has secured reduction in rail and water freight rates, assisted in getting passed remedial legislation affecting the farmer, secured an emergency tariff, and the prospects are very bright that a permanent tariff will be passed that will permit of the bean grower producing his crop at a living profit, by the elimination of the Oriental bean. None of these things could have been accomplished by the individual, but have been by the association.

I might continue indefinitely in telling of what benefit the California Bean Growers' Association has been to the grower, but I do wish to impress upon those loyal grower members who have stood by it through its early days that it was only by their loyalty that it has been able to continue and eventually carry out the constructive, beneficial policies which are now in process of consummation.

You have wisely decided to carry it on and I firmly believe that our association will eventually have the hearty cooperation and support of every bean grower in the state when they begin to realize just what this organization stands for and has actually accomplished.

AMERICAN FARM BUREAU

Next week will be a great one in the ranks of the farm bureau people of America. Monday morning at 10 o'clock President James R. Howard will call to order the third annual meeting of the American Farm Bureau Federation at Atlanta, Georgia. The sessions will continue through Tuesday and Wednesday on questions primarily of national scope, but in a measure handling questions of particular interest to the southeastern part of the country. Such topics as "The Crisis in Southern Agriculture" and "Cotton Marketing" are particularly of interest to southern growers, to all in the nation such questions as taxation, transportation, finance, marketing, especially grain and livestock marketing.

An Iowa farmer will discuss "The Agricultural Bloc and Other Blocs" which from the title will have more or less pep. We note Dr. Walker, president of the California federation, has important place on resolutions and other committees and is director of conference singing.

NAVEL SEASON OPENS

The first carload of navel oranges left Oroville for New York last week and Tulare is following on the heels of the northern county. The state department of agriculture has been making tests of the early season shipments and so far finds that practically all fruit is well over the 8 to 1 standard. Color requirements for shipping oranges will be rigidly enforced.

An eastern exchange is recommending the canning of salads. So long as we have canned bread and butter and pretty nearly everything else that is cannable, perhaps it is in order for the poor froze-ups back east to take the last step in canning and can salads. We, out here in California, prefer to be planting our salad seed about this time of the year, and the garden acts as the cannery.

Chicago packing houses have made material reduction in wages. One concern maintains its labor cost per hundred weight in 1915 was 40 cents while in 1921 it is $1.

HARVEST TIME

Through my long years of experience on the farm I have come to consider this season the most charming of the year. It's the time of the shortening day and the lengthening night. I know full well what it is to be awakened in the Iowa night by the flapping of the blind, the crow of the rooster, or the soughing of the wind in the trees outside the window and to note that it is darker than it was an hour or two before or when I went to bed. I cannot see my hand before me. It is the darkest hour of the night. Instantly I know that that darkest hour is the time when I should rise and go to work.

It is the night's darkest hour when the farmer gets up. He takes his lantern and goes to the barn. He feeds his stock. He milks his cows. He curries and harnesses his team. He goes to the house and eats breakfast, all before there is yet the first rosy tint of dawn in the east.

Breakfast over, the farmer hitches the team to his wagon and rattles off downhill, across the bridge and up the road into the cornfield. He pauses for it to get a little lighter; he cannot yet see his row. And while he is putting his sideboard over and getting his coat off he listens: From every direction there comes the sound of other corn wagons going to other corn fields. Soon there reaches his ear the rhythmic beat of the ears against the sideboards, the cadence of the corn, that corn which is converted into the gold and silver of commerce and manufacturing and industry. Where in all the world is there another song to equal it? Before noon the farmer brings in his load, and another at night.

We are in the dark hour just now. But it is time for us to get up and get our lanterns, whether we be farmers or manufacturers or business men. We want to get those chores done and our breakfast over for morning is close at hand. Let's put on an extra sideboard and grease up the old wagon this morning for we have got the biggest job we ever had ahead of us in America. It is going to take the energy and the faith of the American farmer combined with the energy and faith of the American business man to put it over. But we have just one common interest, service to the whole people.

As a farmer of this country, I ask you business men to join with us in the procession toward national prosperity.—J. R. Howard, President American Farm Bureau Federation.

"Just See that Water Shoot Out——without a Tank"

You open the faucet, the pump delivers a steady stream of water *direct* from the well or other source of supply, *under pressure.*

No tank to leak, freeze, rot, rust, overflow or collapse. No tank to install or maintain. No belts, no gears, no valves, no springs to get out of order.

A compact, simple, complete system the

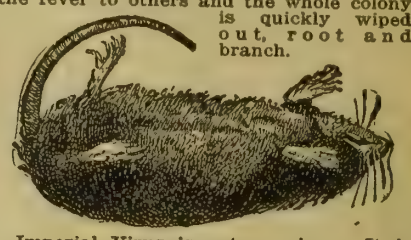
Easy to Kill Rats and Mice

Amazing Discovery Wipes Out Every One—Not a Poison

This remarkable discovery is Imperial Virus. It is a fluid, true Virus, in sealed bottles—thus insuring full strength and potency until used. It affects only Rodents, such as Rats, Mice, Gophers, etc. Spread upon bread, meat, or grain, this bait is greedily eaten and the Virus is extremely fatal. It sets up a burning fever and the pests die outside, hunting air and water. They also communicate the fever to others and the whole colony is quickly wiped out, root and branch.



Imperial Virus is not a poison. It is entirely harmless to humans, poultry, stock, pets, etc., and is therefore, the only safe method by which houses, farms, factories, warehouses, stores, etc., can be rid of these pests.

GET YOURS FREE

To quickly get wide distribution, the manufacturers of this amazing Virus are making a Special Offer of two big, full sized (double strength) $1.00 bottles for the price of one. Use one and sell the other to a neighbor, thus getting yours free. Special inducements for full or spare time effort if you wish to act as representative. As this offer may not appear again, you should write at once.

Send $1.00 today, (bill, money order, check, etc.) and you will receive the two $1.00 bottles, post paid. If more convenient, send no money; just your name and address to the Imperial Laboratories, Room 602, 2110 Grand Ave., Kansas City, Mo. You can pay the postman $1.00 and a few cents postage when the two bottles arrive. Imperial Virus is backed by an Iron-clad guarantee to do the work to your entire satisfaction, or your $1.00 will be refunded any time after 30 days without question or quibble.

Citrus Brown Rot Control

By Howard S. Fawcett

NO other species of fungus probably is capable of doing so much damage to citrus trees in California as the brown rot fungus—pythiacystis citrophthora. It is not only responsible during rainy, moist weather for brown rot of the fruit, but also for one of the most serious forms of gum disease—pythiacystis gummosis. The latter is often spoken of as lemon gum disease because lemon trees are most susceptible, but oranges and many other varieties of citrus trees, except the sour oranges, are also somewhat affected.

The fungus lives and popagates best in moist soils, especially those of the heavier type. During periods of rainy, damp weather when the rains and fogs continue during several days at a time, the fungus grows to the surface and produces motile spores that swim about in the films of water by means of cilia. During heavy rains the drops containing the spores splash up against the fruits that are hanging near the surface of the ground and infect them. Since these motile spores are killed by drying out they, as well as the fungus itself, are quite dependent upon moisture. This accounts for the occurrence of brown rot only during the rainy season and for the close relation of pythiacystic gummosis to excessive moisture in the soil near the trunk of the tree.

Losses in the Orchard

During some seasons the losses from brown rot of the fruit have been considerable. In one instance (an extreme case, one of the horticultural inspectors in Orange County counted 274 fruit affected with brown rot on a six year old lemon tree, all of which were less than three feet from the soil. There were left on the tree only about 200 fruits that were not affected, this being a loss of 58 per cent. Losses ranging from 15 to 25 per cent of the crop have been common in certain orchards.

The average number of brown rot lemons per tree in seven different unsprayed orchards, four to six years of age with branches low, ran as follows in February, 1916: 133, 80, 60, 59, 55, 30, 19. A similar orchard in the same section in which the soil and lower branches were sprayed with Bordeaux had no brown rot except on the lowest part where there were only an average of 1.3 fruit per tree affected. Fortunately, this loss can be almost entirely prevented by spraying the surface of the soil and the lower branches to a distance of about three feet with Bordeaux mixture. Where this had been done the brown rot had been cut down to almost nothing.

The results of one of the spraying experiments conducted by the citrus experiment station in cooperation with the Fruit Growers' Exchange in 1918 were as follows:

Bordeaux (4-6-50); number trees in plot, 20; number of brown rot fruits per tree, 0.75.

Lime-sulphur (5 per cent); number trees in plot, 30; number of brown rot fruits per tree, 11.1.

Not sprayed (check); number trees in plot, 10; number of brown rot fruits per tree, 12.1.

Although the brown rot was not severe in these experimental trees during this season, the results showed that Bordeaux spraying cut down the brown rot to less than one fruit per tree, while the lime-sulphur under the same conditions did not appreciably decrease the loss from brown rot over that for unsprayed trees.

Probably the best time to spray as a preventive measure is soon after the first rains in the fall, provided the fumigation for scale insects has already been done. Bordeaux spraying should follow by at least a week and should not precede fumigation.

Losses in Packing House

When fruits are picked during the season for brown rot and are put through the washing machine preparatory to curing, there are usually a number of fruits so slightly affected as to escape notice. These are capable of contaminating the wash water so that a large number of healthy fruits are infected and later contract brown rot. These by contact in the boxes often cause large losses. If the brown rot has been prevented in the orchard this trouble in the packing house is also avoided. Copper sulphate in the wash water will effectively prevent infection in washing. This will not, however, prevent brown rot from developing in fruit already infected before picking.

The loss from brown rot in the packing house, if not prevented in the orchard, is illustrated by a record in one house in the same section in which the records before given were taken. The fruit not yet apparently affected was picked from an unsprayed orchard and washed in bluestone water. After being stored at the packing house 50 to 70 brown rot fruits per box developed. Fruit picked at the same time from an orchard sprayed in December had practically no brown rot in the packing house.

Control Measures.

In the fall, before or soon after the first rain, and after fumigation if possible, the ground under the trees, the lowest branches, if they touch the ground, and the trunk may be sprayed with Bordeaux mixture to prevent infection from fungus. If the soil or vegetable mulch has piled up too high against the trunk this should be pulled away for a short distance so as to allow the spray to get down as far as the top of the first main roots and to allow the bark to dry out between rains. This will prevent most of the infections of gum disease which often occur during the winter and spring rains, and the results of which do not show above the soil until two to four months later. This applies especially to low budded lemon trees on heavy soils, but may also apply to orange trunks to some extent. Where the soil is particularly heavy and the trees are subject to brown rot gummosis, it is often advisable in addition to the above, to paint the trunks with the Bordeaux paste in the fall before the heavy rains come on to prevent this gum disease. If the soil is kept well pulled away from the trunks, and the trunks thoroughly drenched with the Bordeaux spray when spraying for brown rot, this will prevent brown rot gummosis on most soils.

TRACTOR SCHOOLS

Fourteen tractor extension schools similar to the gas tractor schools conducted during the past few years at the University of California farm at Davis, and at the citrus experiment station at Riverside, are to be organized and conducted in various parts of the state by a special staff of tractor experts from the University of California.

Three thousand dollars worth of tools, tractor parts, models, and other teaching equipment is available for the use of these schools. This equipment which will be carried from one location to another, will make it possible for students to do a large amount of actual repair work on tractors and engines secured from ranches in the vicinity of schools.

The first school is to be held at Modesto November 14 to 19. Similar courses will be given at Fresno, Tulare, at the university farm at Davis, and in ten other localities to be announced later. Further information concerning these tractor schools may be obtained from farm advisors' offices or from Agricultural Extension Division, University of California.

Plenty of Potash

After all the years of Potash Hunger the opportunity has come to buy Potash at very low prices

IN order to take advantage of these low prices no time should be lost in telling your dealer what you will require so that there will be plenty of time to import the Potash.

The right kind and amount of fertilizer is a great help in reducing the cost of crop production.

A fertilizer high in Potash, 4 to 10 per cent, improves both the quantity and quality of all crops.

Great quantities of Potash have been removed from the soil in the past six years. Now is the time to restore it at small cost.

FOREIGN CROP PROSPECTS, OCTOBER 31, 1921

PLOWING and preparation of the soil for winter seeding has made good progress throughout the northern hemisphere and is nearing completion in many countries, according to reports to the United States Department of Agriculture. Recent rains in Germany, Roumania, Hungary and central Europe in general have put the soil in excellent condition and will tend to increase this acreage. Recent rains have greatly facilitated fall seeding in Great Britain and the soil is generally in excellent tilth. The present outlook, however, indicates a probable reduction in acreage. The drouth is again becoming serious in France and fall seeding is being delayed.

Further good rains have generally benefited conditions in British India, and it is probable that a normal acreage will be sown to wheat. The prospects are not favorable for an increase in the wheat acreage in North Africa, as the growers are discouraged over present prices. Moisture conditions have been favorable in Canada and the seeding of winter wheat is nearly completed. Seeding is practically completed in the northern and central sections of the United States and some seeding is being done in the far western states, but rain is greatly needed in this section to facilitate seeding and germination.

A recent communication from Argentina states that "on September 30 in the northern province of Buenos Aires and in the Pampa Central wheat is still being sown, which is nearly a month later than is usually done. This is due to the extremely cold and dry weather of July and August, so that seeding was impossible at the customary time." The wheat acreage for Argentina, as given by the Argentine government for the year 1921-1922, is 13,927,000 acres compared with 14,957,000 in 1920-1921. The director of agricultural statistics for Argentina also states "that in his long experience of 25 years he had never seen such adverse agricultural conditions as have prevailed during the usual period of spring plowing and planting. The spring rains began, however, on September 15 and have been general throughout the country, thus relieving what promised to be a most serious situation."

Good rains have benefited crops in Uruguay and a wheat crop of about one-third more than last year is now expected. Weather conditions continue favorable in Australia and considering the increase in acreage and the favorable growing conditions a large crop is expected. Good rains are also reported from South Africa over the bulk of the wheat growing area.

Thrashing of the grain crop for 1921 is now practically completed. Rain interfered somewhat with thrashing in some sections of Canada and a slight reduction both in quantity and quality of the wheat crop may result. Harvesting and thrashing were generally carried on under favorable conditions in the United States and also in eastern, southern and central Europe. According to estimates now available the total wheat production of the 29 leading wheat producing countries of the world (excluding Russia) was 2,852,825,000 bushels in 1921 compared with 2,661,959,000 bushels in 1920, an increase of 190,866,000 bushels.

The condition of crops in China is generally reported to be disappointing. Excessive rains in the early part of the growing season, succeeded by a long continued drouth, caused much damage. As no statistics are available it is impossible to state the amount of damage done, but the general belief is that crops are below average. The wheat crop in the Yangtze Valley has proved about 60 per cent of the normal and 20 per cent below that of 1920. In Shantung and Chihli the crop is again very poor and almost as bad as last year's production, when the great famine occurred. The crops in southern Manchuria are reported to be abundant excepting part of the Liao Valley. In general crops are expected to yield about 20 per cent above average. The condition is not so favorable in northern Manchuria and the continued drouth in the Hunchun district has nearly killed the bean and Italian millet crops. The wheat crop for northern Manchuria is expected to be about 20 per cent below average.

British India continue to show improvement. The condition is good to excellent in the central provinces. Winter paddy is normal in Bengal but poor in Assam, while transplanted rice in Assam is reported to be good. Owing to the improved prospects for India in general the price of rice has fallen appreciably in most provinces. The first official estimate of the yield of rice in Japan is given as 18,241,439,000 pounds (hulled) as compared with 19,849,197,000 pounds in 1920. Recent figures available for Spain give the production as 402,877,000 pounds (hulled) compared with 393,759,000 pounds in 1920.

DECIDUOUS PRUNING DEMONSTRATIONS

By Ernest Braunton

THE farm adviser of Los Angeles County is conduoting a series of 16 pruning demonstrations in deciduous orchards. The first was held in the ten acre orchard of F. L. Williamson at Lankershim, November 9. The planting consists of eight acres of peaches and one and a half of apricots, the remaining half acre being used for house, outbuildings, etc.

Last year, owing to adverse climatic conditions, this orchard bore but a one per cent crop while an adjoining orchard bore a 25 per cent crop. Last autumn in order to properly handle a melilotus cover crop Mr. Williamson gave a heavy irrigation in late September. He now thinks irrigation should not be given later than August and that the September irrigation produced a too early blossoming which late spring frosts severely injured, there being an almost total crop failure. The neighboring ten acres which bore a 25 per cent crop has never been irrigated and blossomed much later. He said: "This is my explanation of the difference; it is mere theory; perhaps I am wrong."

Assistant Farm Adviser Blanchard gave the talk and pruning demonstration. He said: "It has been abundantly proven that the long pruning system, so called for want of a more fitting name, improves production. These demonstrations have been staged continuously for four years in all sections to get the more conservative growers out of a rut and to overcome strong preconceived ideas of what constitutes proper or profitable pruning. So each year we prune two trees by our system and two adjoining trees by the old stubbing process. I shall after this talk do the long pruning on the tree I pruned last year, while Mr. Williamson will prune the next tree, as he did last year, by the old stubbing method. My tree will be pruned but little, just some thinning.

"This new pruning process came about after years of study and experiment because the old style was not always bringing good results and it was known something was fundamentally wrong or lacking. The stubbing process produces much long new growth requiring a long season to mature; the leaves are many, thin and papery and of light color. Such growth does not have sufficient time or energy to ripen and store food for next season's crop effort. Long pruning or thinning allows growth to function naturally and to the fullest, store food, etc. The leaves are thick and of a fine dark green color, the sap is rich, thick and sugary. Subsequent growth each year is vigorous and robust—the tree grows larger in all parts, diameter of trunk included. The crop is always heavier and better than that of trees treated by any other pruning process.

"In this section trees should be planted in January or by February 1, and whitewashed at once. This is far preferable to yucca or other protectors, for the latter will not allow side shoots to develop except above top of protector. We wish to get three limbs at intervals of eight inches well distributed around the young stem. These are allowed to grow out and all others have their terminals nipped or pinched off. These latter then make rosettes of leaves which protect the trunk and branches from sunburn and manufacture plant food. The second year these three leaders should be five feet long and on each of these two are left, making a total of six in all, and these are never headed back but grow out continuously as the foundation of the framework of the tree.

"After this we prune little except to thin, but every year we thin and encourage branches that hang 'down and out.' This thinning lets in sunlight through all parts of the tree so that fruit spurs are produced on lower parts where usually lack of light prevents their development. It takes about three years to get proper fruit spur development where change is made from stubbing to long or natural pruning. On account of richer sap stored in the naturally pruned tree—more sugar—it cannot suffer so much from frost as in the case of the weakly succulent growth following stubbing. In the latter the sap is too much diluted to resist cold. But pruning is not all of care or necessary provision. The last three or four years of insufficient rainfall have so dried out the subsoils that the tops have too much drawn upon the water supply needed by the roots and summer irrigation has been necessary to good crop production.

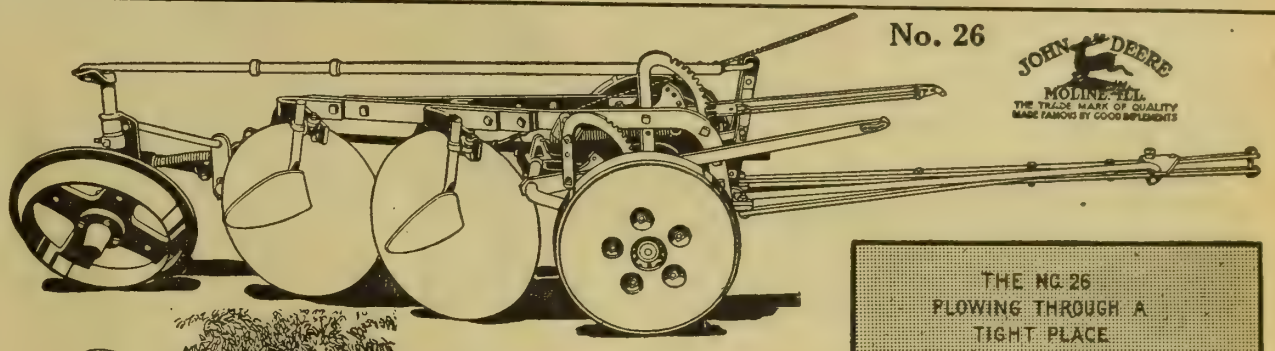
"As to results of change from the old method to the new, I know of one orchard that for years yielded four to five tons of fruit to the acre. After the first year of long pruning it yielded eight tons and the second year after nine tons. I know of a 60 acre orchard where the owner was doubtful of value of the new process, but he long pruned six rows across the entire 60 acres, gave six rows an intermediate pruning and stub pruned the remainer as usual. The latter continued to yield four to five tons as of old; the intermediate pruning gave over six tons, while the six rows long pruned yielded at the rate of ten tons to the acre. Last year one-half the orchard was long pruned and this year the entire 60 acres has been so treated. In the face of such marked examples at widely separated points, one coastal, the other interior, and scores of like examples at various points, the value of long or natural pruning has been clearly demonstrated."

DEVELOPMENT OF POTATOES

For three years Charles F. Clark, horticulturist, United States department of agruculture, has carried on experiments at the Colorado potato experiment station and for four years in Maine, for the purpose of determining the beginning of tuber formation and development in the potato.

The time of beginning tuber formation is approximately the end of the period of flower bud development, and the greater part of those which grew to exceed a half inch in diameter were formed at that time. The greatest rate of growth was about 80 days after planting (in Colorado). An increase in the weight of tubers took place after the vines had been killed by frosts. The number and the weight of tubers in a hill were found to be influenced by the size and kind of the seed piece planted, the larger pieces producing heaviest crops. Soils were important factors; the largest numbers and weights being produced on the lighter soils. Additional irrigations, until they became too frequent, while not increasing the number of tubers, did increase the weight per hill.

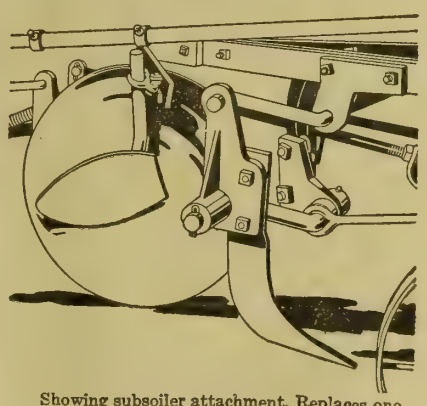
The apple packing schools held at Hood River, Oregon, were well attended.



No. 26

JOHN DEERE MOLINE, ILL. THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

Showing No. 26 with ridging attachment preparing soil for proper irrigation. Attachment costs very little and does away with necessity of buying extra implement for ridging.



Showing subsoiler attachment. Replaces one disc. Controlled by power lift. Permits plowing and subsoiling in one operation with small tractor.

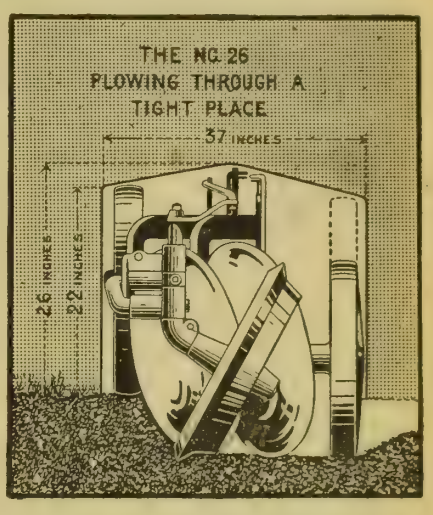
A 3-in-1 Plow

You can use the No. 26 Orchard Plow—

1. For thorough plowing without injuring the trees.

2. For ridging the soil to control irrigation water.

3. For subsoiling to break up plow pan, save much irrigation water and increase fruit yields.



JOHN DEERE ORCHARD PLOWS
FOR SMALL TRACTORS

They get under low limbs, up close to the row. Only 26 inches high when plowing six inches deep. Only 37 inches wide. No projections to interfere. Hitch permits wide offset of plows to right or left of tractor for work close to row.

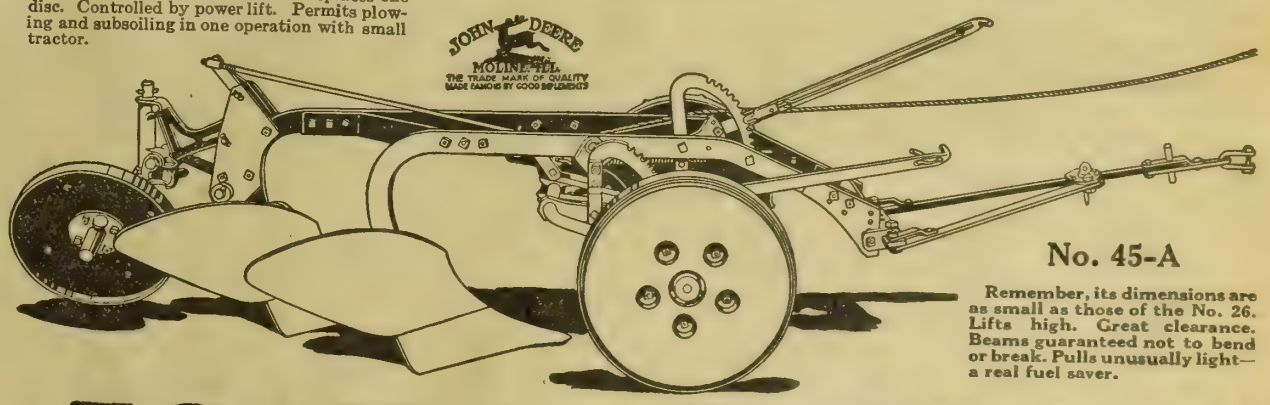
Stiff Hitch on No. 26 is a great disc plow improvement. Being stiff, it tends to hold the plow in the furrow when offset, and its control of the rear furrow wheel makes possible short turns and close work at ends of orchard.

Floating Rear End is another No. 26 feature that you will be sure to appreciate. The set-screw collar on the rear axle may be left loose to permit rear end of plow to rise over a root without carrying weight of rear wheel—a great aid in preventing damage to large roots.

Unusual clearance. Compound power lift raises plows unusually high. Simple construction, and every part strong and substantial. Just the right size for small tractors.

Write us today for folders describing John Deere Orchard Plows.

John Deere Plow Co.
San Francisco, Cal.



No. 45-A

Remember, its dimensions are as small as those of the No. 26. Lifts high. Great clearance. Beams guaranteed not to bend or break. Pulls unusually light—a real fuel saver.

JOHN DEERE

Queries

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Mottle Leaf or Chlorosis

Am asking information in regard to my orange trees, ten years old, grown in light soil and good bearers, foliage dark green, though I find many with mottled leaves of a lighter green, with some nearly white, or yellow spots mostly on the east side of the trees. What is the matter with them and what should I do?—Subscriber, Anaheim.

Mottle leaf, or chlorosis, or various similar manifestations of trouble cannot be answered definitely without personal inspection or having before one definite information as to methods of handling and present condition of soil. These various colored leaves are usually considered an indication of unfavorable soil condition or constitutional trouble. Build up the soil, and soil building is a slow process. Stable manure, green manure, commercial fertilizers, straw, alfalfa hay, and various other soil builders should be used. The coarser strawy manure should be put as deeply into the soil as possible. Some use ordinary mold board plow, throwing out two furrows. Others use shovel plow, but in any case put deeply in the ground, cover lightly and irrigate. This may be repeated across furrows, but the building up of an old orchard calls for much more extended discussion than is possible in this department.

Pimiento Goat Cheese

Query as to how to make pimiento cream cheese from goats' milk is answered by Mrs. Winthrop Howland of Rancho El Chivar, Redlands:

First make Neufchatel. Fresh clean new milk is used. (Can be pasteurized if any doubt as to thorough cleanliness is felt.) Temperature about 72 degrees Fahrenheit. To every 30 pounds of new milk one cubic centimeter of commercial starter is added and then ½ cubic centimeter of rennet extract is put in, and the whole thoroughly mixed and set aside to coagulate, which it should do in about 18 to 24 hours. As soon as the milk is firmly coagulated it is placed on a cotton covered strainer rack or in cotton bags to drain. I find a very fine cheesecloth is the best material to make the bags or strainers of; the coarser cheesecloth is apt to allow the loss of too much butter fat. The acidity of the exuding whey at this time should not be over .35 per cent or the flavor of the cheese will be too acid. The draining process requires several hours. As soon as the curd is dry salt is added to taste. Neufchatel cheese should have a sweet, clean, mild flavor; the texture should be fairly dry, yet smooth, and entirely free from lumps. There should be no leaking whey. If properly made Neufchatel will keep in good condition for two weeks if stored in a cool place.

To make pimiento cheese: To every 10 pounds of Neufchatel add ¼ to ½ pound of pimientos. Put through a meat mincing machine and grind to a pulp. The cheese and peppers are then mixed thoroughly and pressed into rectangular shapes weighing about ¼ pound, if desired. The usual way is to sell in bulk.

Gypsum

Is gypsum good for wheat, oats and barley?—Subscriber, Corning.

Yes, we think gypsum would be valuable on Corning soils. It has the faculty of lightening or making more friable the surface. If we recall rightly much of the soil about Corning is a reddish, rather heavy, especially rich soil. The mechanical effect of the gypsum should prove beneficial on that type of soil, provided it can be had at a reasonable price so that a fairly heavy application can be made. If it has not been tested and may be had at reasonable price, try it on different plots, say, one with 500 pounds per acre, another with 1,000 and another with 1,500 pounds per acre.

Almond Seedlings

Do almond seedlings have to be grafted or budded in order to produce a good crop of almonds? When is the proper time to have the budding done?—Subscriber, Lindsay.

If you wish to be sure of raising a desirable variety of almonds it is necessary to graft onto almond or, as usually preferred, peach seedling stock. To grow your tree from the seedling root would probably result in a very indifferent quality of nut or possibly a non-bearing tree. The proper time for grafting is in spring just before growth starts, or if budding is done it should be done just after sap has begun to flow.

Thin Shelled Nuts

By same mail we are sending you a sample of walnuts grown on healthy trees ten years old. These same trees bore a fine crop last year of large, healthy nuts, but this year the nuts are small and some have holes in the shell. Will you kindly give us your opinion regarding the possible cause of the poor crop?—Subscriber, Oceanside.

This insufficient shell is usually considered an indication of lack of moisture or lack of fertility in the soil or some other lack which prevents the tree properly functioning. Of course there are some trees which have the inherent fault of always giving a large percentage of nuts so that many are really defective. But apparently this tree is not in that class and we believe another year with sufficient moisture and fertility added to the soil will show perfect nuts.

Fertilizer in Furrow

Referring to furrow manure distribution in article by A. D. Shamel in Cultivator of September 17, how close can fertilizer furrow be to two year old pear trees without danger of burning? Fertilizer composed of about one part stable manure, two parts alfalfa, six parts bean straw.—Subscriber, Lancaster.

Mr. Shamel answers: "I believe the furrows for distribution of fertilizer of stable manure, alfalfa and bean straw can be located safely within five or six feet of the trees. I do not believe that there will be any danger of burning trees with a fertilizer of this character even if applied in furrows closer to the trees. I have seen one or two instances where stable manure has been buried in furrows within three feet of apple and pear trees from two to four years of age, without any apparent damage and with very markedly beneficial results. There is very little heating, so far as I have ever observed, in the case of manures such as stable manure, bean straw or alfalfa, when buried in the manure furrows as described in a recent issue of the California Cultivator. The decomposition of these organic fertilizers goes on slowly and without any detrimental effects from overheating or burning, so far as I am aware. I have frequently observed in manure furrows in citrus orchards that the young and actively growing fibrous roots of the citrus trees developed in the decomposed manure on the outer edges before the bulk of the manure had become decomposed. This would indicate that the conditions during decomposition of the manures in the furrows are satisfactory and favorable to the fibrous root development of the citrus trees, and so far as I am aware are equally favorable to the development of the feeding roots of other fruit trees as well. I have also had the opportunity of studying recently the behavior of grape roots in the buried manure in furrows. The behavior of the roots of the grape in this furrow manure area seems to be very similar to that of the citrus tree roots. With young trees I think that it would be desirable to plow furrows on all four sides of the trees if possible, fill them with manure and cover immediately with soil. If this plan is not practicable, furrows, on two sides of the trees in the direction of the irrigation flow will probably be satisfactory."

Leaves Dropping Prematurely

Am sending leaves from young apple trees, which are turning yellow and falling. There are only a few trees in the plot so affected, other apple and prune trees in same orchard still holding leaves. Trees are in Alameda County. Am anxious to know the cause of the trouble and how to

Household Department

FRAGRANCE OF THE DAY

From every open kitchen door
A whiff of fragrance flies,
The aroma appetizing
Of tarts and pumpkin pies.
Above the homestead's shingle roof
The sunset fades away,
And fair and frosty falls the eve
Before Thanksgiving day.

The children and their children, too,
By auto, car and train,
A happy, laughing, loving crowd,
Come trooping home again
To wander in the woods and fields
Where once they used to stray,
And with the old folks on the farm
To keep Thanksgiving day.

Within the shadow of the barn
The fattest of the flock
By lantern light is made to do
Obeisance to the block;
And baby fingers, pink and small,
Will with his drumsticks play
A merry measure at the feast
Upon Thanksgiving day.

In honor of the noble bird
That shares the eagle's fame,
Bring out the finest tablecloths
The linen chest can claim;
The best of silver and of glass
In glittering array,
And grandma's rosebud china, too,
Upon Thanksgiving day.

Lo! from the Pilgrim's barren rock,
Surrounded with the snow,
The swiftly passing years have seen
A land of plenty grow;
'Tis founded on the loyal love
That brings from far away
The nation's sons and daughters home
To keep Thanksgiving day.
—Minna Irving in Leslie's.

THE LOST THANKSGIVING PUDDING

By Annette Squire

IT was on Thanksgiving day, not an hour before dinner, that Peggy Weggy and Jerry Dumpling found Needle Naddle, Mother Goose's Robin Redbreast, scratching furiously and excitedly in the grass by the garden path.

"What in the world is the matter?" cried Jerry Dumpling.

"I'm hunting for the lost bag pudding," chirped the birdie, "and where can it be? Where can it be? The little King of Hearts made it for his mother's Thanksgiving dinner! He filled it full of plums and in it put two lumps of fat as big as your two thumbs! And he lost it! Where is it, where is it? At first he cried. But now he has stopped. And because he is so brave and has stopped crying, Mother Goose says that his pudding must be found! And to whomever finds it Mother Goose will give—but that's a secret!"

"Oh, let us hunt for it," cried Jerry Dumpling.

The robin looked pleased at that. He stood on one foot a moment, then away the robin ran.

"He's going otward Primrose Hill," said Jerry Dumpling, "let us go there!"

They thought that the house of the little King of Hearts was beyond the hill. So surely the lost pudding must be somewhere near there. But when they came to the hill they saw a funny, thin-legged, peaked-capped little fellow running about among the rocks and stones, turning them over to look under them, and crying as if a trouble had come upon him. So they stopped; and Peggy Weggy said, "We must go to help that little man. The little king has many helpers. This poor little man has none."

"Who are you?" Jerry Dumpling asked. "And are you looking for the little king's bag pudding?"

"No, no," groaned the queer little fellow. "I'm Peter Piper, who picked a peck of pickled peppers. But if Peter Piper picked a peck of pickled peppers, where is the peck of pickled peppers Peter Piper picked?"

"I don't know," said Jerry Dumpling, "but why do you feel so very badly about losing the peppers?"

"Oh, oh! That's because I promised to bring them to the little King of Hearts for his Thanksgiving dinner! I went into his mother's pantry and got her peck basket to carry them in, and now I have lost basket and all!"

Just then Peggy Weggy saw what looked like a great basket turned upside down at the foot of the hill. She ran to it, righted it, and there inside it were the pickled peppers! And, oh joy! There was the bag pudding! And now she remembered that Peter Piper was always forgetful and careless.

"Jerry!" called Peggy Weggy, "the little king's pudding is here in his basket! Peter Piper carried it off because he didn't notice that it was in the basket! You funny, foolish, forgetful Peter Piper!"

And at that very happy moment Mother Goose and her gander came up the hill, followedby a great band of children—Bo-Peep, Boy Blue, Tommy Grace and all of them.

"Oh, children, look!" rejoiced Mother Goose, "Peggy Weggy and Jerry Dumpling have made two people happy! They have found Peter Piper's peppers! And they have found the lost pudding for the little King of Hearts. For a reward they shall be doubly full of happiness and thanksgiving all the day long! And besides that, for their dinner they shall have the top slice off the little king's bag pudding!"

We are thankful because we have found out that "laughter is as divine as tears."

LET US GIVE THANKS

Oh, blest Thanksgiving day! Nor yet
Can feast of bread and meat and wine
Alone, within the breast beget
The peace of gratitude divine.

Nor for men's selves, nor for their own
Loved few, the thankful board is spread;
For him who wills to dine alone
The spirit of the day is dead.

The joy is his whose loaves or crust
Are shared with stranger folk or friend;
Who, in his larger loving trust,
Gives of whatever God may send.
—Nixon Waterman in Collier's.

Back home to spend Thanksgiving!
Each step upon the sod
My footsteps pressed in childhood
seems to draw me nearer God.
The rustle of the dead, brown leaves
seems like a murmuerd prayer,
And the spirit of Thanksgiving
broods softly everywhere.

A THANKSGIVING MENU

Grapefruit.

Radishes, salted nuts, olives.

Cream of oyster soup.

Roast turkey, cranberry sauce in molds; mashed sweet potatoes; cauliflower au gratin.

Celery Mayonnaise, with lettuce hearts.

Pumpkin ices.

Crackers and cheese. Coffee.

HOW TO CARVE

To carve with ease one of the first requisites is a good knife, well sharpened, before coming to the table. It is a most uncomfortable and disagreeable sound to hear the carver whetting the knife while the guests are waiting to be served.

The knife should be used for no other purpose than carving. It should never be found in the kitchen cutting vegetables, meat and breads, its sole office being to carve the meats brought to the table. Heat destroys its temper. A sharp, strong blade, a good handle and a keen edge are qualities belonging to a good carving knife. Another point to be observed in carving is to always cut at right angles with the fibers of the joint. When a joint is properly carved it is more agreeable to the eye, pleasanter to the taste and much more easily masticated.

New Lamp Burns 94% Air

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, V. N. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

IT SELDOM FAILS

Many boys and girls as they progress in their teens, outgrow strength.

Scott's Emulsion

FOR THE THANKSGIVING DINNER.

Some Old-Time Southern Recipes

By Annette Squire

Southern Roast Chicken

Cut two fryers in halves, put in roaster and pour boiling water on them and bake about half done. Turn, and pour these flavors over the chicken, thereafter basting till a golden brown: ¾ teaspoon salt, 2 good lumps butter, 3 tablespoons flour rubbed smooth with 1 tablespoon vinegar and 2 tablespoons vinegar from pickled peaches, with pepper to taste, and 1 teaspoon or more mustard mixed with flour.

Roast Chicken With Sweet Dressing

Rub salt on chicken and stuff with this dressing: ½ loaf stale bread made moist with milk, mixed with 2 tablespoons sugar, 2 tablespoons bacon drippings, 1 sliced apple, 1 cup raisins, and salt and pepper to taste, with lastly 4 dry crumbled crackers mixed in. Pour a little hot water around chicken, bake uncovered for 20 minutes in hot oven, then reduce heat; pour over chicken 2 quarts milk, cover and bake tender. Add hot water to gravy and thicken with flour.

Sour Cream Biscuits

My mother is one of those cooks who make delicious hot breads without measuring. As near as I can tell, this is what she "takes" and these biscuits are tender and flaky rather than feathery: 1 quart (4 cups) flour sifted with 1 teaspoon salt, 1 level teaspoon soda, ½ cup thick sour cream and 1½ cups sour milk or buttermilk; or use 2 cups buttermilk with 2 tablespoons cooking oil. Beat with spoon. Toss on board to take up a bit more flour, but do not knead. Brush with milk.

Feathery Biscuits

4 cups flour sifted with 1 level teaspoon salt and 3 heaping teaspoons baking powder. Stir up all at once with 2 cups sweet milk and 2 tablespoons melted butter or oil. Tip bowl and beat like cake. If too stiff to beat, add a little milk. Toss on board to take a bit more flour on outside, but do not turn this flour in. Do not knead, and roll very gently so as not to lose the puffiness that the beating puts in and which makes them come out feathery. Turn over in melted butter or oil that has been heating in the baking pan. As far as I know, this whipping of the biscuit dough is original with us. I have never seen it in any recipe. I never have made especially good biscuits in the ordinary way. These biscuits always bring me compliments. They should go into a hot oven as soon as cut.

Sour Cream Slaw

Shred white, tender cabbage and toss it in the bowl with a little vinegar. Let stand awhile, pour vinegar off, salt cabbage and toss it in heavy sour cream. Shake paprika or black pepper on top.

Apple Pie With Vinegar Sauce

Make ordinary apple pie, only have it sweeter than usual. Serve with this sauce: Shake together 1½ tablespoons cornstarch and 1 cup sugar. Moisten with 2 tablespoons vinegar and a little water; stir into 2 cups boiling water with 2 tablespoons butter in it. Stir and cook till thickened.

Cream Pumpkin Pie

Line 3 pie tins with pie crust and brush outer edges with cream. Take 1 can pumpkin (or 1½ pints baked pumpkin, baked till tender in shell, scraped and put through colander), and mix with 3 cups milk, ½ cup thick cream, 4 eggs beaten with ½ teaspoon salt, 1 teaspoon each ginger, allspice and cinnamon, ½ teaspoon each nutmeg and cloves, 2 tablespoons molasses, and enough sugar to make the custard taste decidedly sweet, probably 2 cups. Some pumpkins are sweeter than others. Some pies taste flat for lack of sweetening. Thin or stringy pumpkin will spoil the pie, and so will cooking it too fast or too long. To avoid soaked crust, do not pour the custard into the pie crust until you are ready to set it in the oven. Now watch carefully that the custard does not get hot enough to bubble, and remove from the oven the moment the custard is set, when the pie at the center ceases to be watery.

Fig Dainty

Line gem pans with flaky pastry. Rolling your pastry on quite a bit of flour, doubling over without working in the flour picked up, and then rolling out again helps the flakiness. Prick with a fork and bake. When cool and ready to serve fill the patties with peeled and sliced figs and heap with whipped cream, sweetened and flavored with lemon. On the top of each drop a bit of any red, tart jelly.

FOOD FOR THE CHILDREN

FARMERS of the United States have contributed thousands of bushels of grain for distribution to the starving peoples of the Near East. Collection of this food is in charge of the Near East Relief Grain Campaign, 700 Kansas Avenue, Topeka, Kansas. This story of a little Armenian child is given to the Cultivator by the association:

Didjirian Hieg crawled from the gutter and hid behind a pile of old boxes and barrels in a dark corner of the street. When he saw three Americans coming down the street he scurried away much like a rat from the grain bin when the door is opened.

Didjirian, in fact, resembled a rat in his actions and in his search for something to eat. He was a shriveled-up youngster, dirty beyond description, hollow-eyed and frightened.

Barely existing on the occasional scraps of food he found in the gutter and clothed in the rags he could pick up, this mite of humanity ran to his hiding place whenever he saw a man in the distance. Even starvation could not overcome his fear.

Didjirian was hunted from the hole in which he had sought to hide. So frightened was he that he could not talk, and his emaciated body trembled. He did not know that the men who found him were Near East Relief workers whose duty is to search out the orphans and destitute in Armenia, the Russian Caucasus and the Holy Lands. Helpless, he considered every one his enemy.

Knowing resistance was useless, this Armenian boy, victim of years of suffering and starvation, went along as he was bidden. He finally found himself in an orphanage, seated at a table on which there was bread and some other food. He ate ravenously when bidden.

A bath and decent clothes and Didjirian was transformed. Kindness and food had wrought a miracle. Fright merged into astonishment and peace. Then he began to talk.

His story was shocking in its misery. His father and mother had been murdered before his eyes, and his sister carried away into a horrible slavery. He had been left alone without food or friends. Didjirian had wandered in the country, getting a little food now and then. He had fallen in with a group of refugees and had come to the city. There the struggle was more intense. Most of the refugees had no food and none enough to share with him. He had taken to the gutter to find bread. Men had cursed and beaten him. He had been hauled home by a burly brute and made to work at tasks beyond his strength with only scraps of food to eat. Finally he had run away and gone back to the gutter, living as a rat lives on whatever he could find to eat.

There are thousands of other Didjirians. The Near East Relief, acting as the agent of the American farmers, is collecting 5,000,000 bushels of grain for the relief of these orphans and refugees during the coming winter. Every farmer is invited to aid.

A bushel of wheat will save a life. It will rescue an orphan from the misery and horror of a gutter existence.

And in the heart of every child succored in this time of extremity will be written indelibly the name of their benefactors and saviours, the farmers of America. These farm boys and girls of the Near East will never forget.

SOMEBODY SATISFIED

The vegetarian is on the job,
His features wreathed in optimistic leer.
The price of meat he scorns. Corn on the cob
He now consumes, and smiles from ear to ear.

—New York Sun.

HOUSEHOLD QUERIES

Mincemeat

Please print in household department a recipe for mincemeat.—R. F. M., San Gabriel.

Among all holiday sweets, mince pies take first place. The filling for these is put together in stone crocks and allowed to remain untouched at least two weeks. It gains an added flavor the longer it stands. Here are two capital recipes procured from old-fashioned cooks:

No. 1—5 pounds chopped beef, 2 pints chopped suet, 10 pints chopped sour apples, 2 pounds sugar, 1 quart molasses, 2 ounces cinnamon, 1 ounce cloves, 1 tablespoon salt, 1 teaspoon pepper, 6 pounds fruit. Thin with 3 pints cider. Mix all together and cook.

No. 2—Cook 2½ pounds beef (this should make 2 quarts when chopped), 4 quarts chopped apples, 1 pint currants which have been thoroughly cleansed, 1 quart raisins stoned just before using, 1 cup chopped citron, 4 cups brown sugar, 2 cups molasses, 1 cup chopped suet, 1 nutmeg, grated; 1 tablespoon salt, 2 tablespoons cinnamon, ¾ tablespoon cloves, 4 cups sweet cider or 3 cups cider that has been boiled down. Place in an earthen vessel and keep in a cool place. This quantity will make 12 pies.

HINTS FROM HOUSEKEEPERS

Fruit Cake

2 eggs, beaten separately; 2 cups fruit, currants and raisins; 1 cup citron or nuts, 1½ cups sugar, 1 cup molasses, 3½ cups flour, 1 teaspoon baking powder, ½ cup butter, 1 cup strong cold coffee, 1 teaspoon cinnamon and nutmeg, ½ teaspoon cloves, 1 level teaspoon soda wet in a little water.

Brown Betty, a Very Inexpensive Pudding

Butter toasted bread freely, cut into small dice and lay in bake pan or pudding dish. Wet each layer with water, then take fresh apples, peel, cut in small pieces and lay over toast. Sprinkle with nutmeg, cinnamon, sugar, then another layer each of toast and apples, till the pan is full, putting sugar, nutmeg and cinnamon on each layer. For sauce take 2 or 3 tablespoons flour, a little sugar, butter, nutmeg, cinnamon, and vinegar about 3 tablespoons; wet with cold water, then pour boiling water on and boil a few minutes. Serve warm.—Mrs. Leitch.

Sweet Pickles

I notice that a subscriber has requested a recipe for "sweet pickles like those you buy from the store." I wish to submit one that insures the finest sweet pickle:

Choose only small cucumbers. Lay 150 small cucumbers in cold water for 1 hour, remove and drain, then turn into a stone jar and pour over them cold brine (strong enough to float an egg on the surface). Let stand 3 days, then remove pickles, drain and dry on a clean cloth or towel. Wash jar and return cucumbers to it. Cover with pure water until next day. Have ready hot vinegar in which you have boiled 2 minced onions, 20 cloves, an ounce each of mustard and celery seed and a few blades of mace. Fill jar with this boiling mixture and add 5 cups sugar (brown is best) stirring the cucumbers up from the bottom. Cover tightly. Put over a clean heavy cloth, then two layers of cotton (sheet cotton); tie on well and place a board on top. In a week scald the vinegar again and return to the jar. Let pickles stand for 6 weeks before using; 6 months is even better. These are delicious.—Jeanette Steendahl, Los Altos.

Horehound and Honey Syrup

Now that the fall season is here and colds are easily taken, a little home remedy may be of help to some one. I have found it very beneficial myself, and it is very easily prepared. Take the leaves only of horehound, a small handful, boil in small quantity of water about ½ hour, then strain and boil down to a rich syrup, adding 3 tablespoons honey. If you haven't the honey, ¾ cup sugar will do, but the honey has healing qualities and should be used if possible. I always use the honey that has sugared.—Aida.

Green Tomato Mince Meat

8 quarts green tomatoes chopped fine; squeeze out juice and pour boiling water on them, drain through colander. Repeat this three times. Cook slowly 2 hours, add 6 pounds brown sugar, 2 pounds raisins, 2 pounds currants, 1 pint vinegar, 2 scant tablespoons cinnamon, cloves and salt. Add 2 oranges and 1 lemon chopped fine. Stew ½ hour and can boiling hot. Add water any time while cooking, if needed.—Mrs. H. W. Keith, Oroville.

Buttermilk Yeast

Scald 1 quart buttermilk, stir in corn meal to a stiff mush, let cool, then add 1 yeast cake that has been soaked in a little warm water, let rise and stir down 3 or 4 times, thicken with corn meal, roll out on board, cut in rounds with a tin baking powder can, dust a large pan with meal, lift cakes with a broad knife on the pan. Don't let them touch; dry in the shade on a porch for several days. Keep turning until thoroughly dry, then put away in a cardboard carton. One cake will make about 6 loaves of bread. The quality is excellent and it never fails. This is my favorite yeast recipe.—Aida.

French Omelet

Take from 6 to 12 young onions, according to size, clean carefully, cut, slicing white part thin and tops in short pieces. Heat 2 tablespoons fat in frying pan, add onions with 1 teaspoon salt; cook until well wilted and tender, stirring frequently. Do not allow to brown. Set aside to cool while preparing a batter as follows:

Sift together 1 cup flour, 2 level teaspoons soda and 1 teaspoon salt; add gradually 2 cups sour milk, preferably buttermilk, then onions, stir well. Lastly drop in 6 or 8 eggs, break yolks and stir very lightly. Cook on hot griddle like hot cakes and serve with butter.—Subscriber, King City.

THE CORN SONG

Heap high the farmer's wintry hoard!
Heap high the golden corn!
No richer gift has Autumn poured
From out her lavish horn!

Let other lands, exulting, glean
The apple from the pine,
The orange from its glossy green,
The cluster from the vine!

We better love the hardy gift
Our rugged vales bestow,
To cheer us when the storm shall drift
Our harvest fields with snow.

Through vales of grass and meads of flowers,
Our plows their furrows made,
While on the hills the sunny showers
Of changeful April played.

We dropped the seed o'er hill and plain,
Beneath the sun of May,
And frightened from our sprouting grain
The robber crows away.

All through the lone, bright days of June
Its leaves grew green and fair,
And waved in hot midsummer's noon
Its soft and yellow hair.

And now, with Autumn's moonlit eves,
Its harvest time has come.
We pluck away the frosted leaves,
And bear the treasure home.

There, richer than the fabled gift
Apollo showered of old,
Fair hands the broken grain shall sift,
And knead its meal of gold.

Let vapid idlers loll in silk
Around their costly board;
Give us the bowl of samp and milk,
By homespun beauty poured!

Where'er the wide old kitchen hearth
Sends up its smoky curls,
Who will not thank the kindly earth,
And bless our farmer girls!

Then shame on all the proud and vain,
Whose folly laughs to scorn
The blessings of our hardy grain,
Our wealth of golden corn!

But let the good old crop adorn
The hills our fathers trod;
Still let us, for his golden corn,
Send up our thanks to God!
—Whittier.

A can of Calumet Baking Powder will make more pies, cakes, biscuits, muffins, etc. than a can of most other brands.

It lasts longer—goes farther because it contains more than the ordinary leavening strength—therefore you use less.

When a recipe calls for two teaspoons of baking powder, use two level teaspoons of Calumet, the results will always be the same—perfectly raised bakings—remember this when you buy baking powder and don't forget that Calumet is the economic buy because it goes farther.

A pound can of Calumet contains full 16 oz. Some baking powders come in 12 oz. instead of 16 oz. cans. Be sure you get a pound when you want it.

Western Canada Offers Health and Wealth

and has brought contentment and happiness to thousands of home seekers and their families who have settled on her FREE homesteads or bought land at attractive prices. They have established their own homes and secured prosperity and independence.

In the great grain-growing sections of the prairie provinces there is still to be had **on easy terms**

Fertile Land at $15 to $30 an Acre

—land similar to that which through many years **has yielded from 20 to 45 bushels of wheat to the acre**—oats, barley and flax also in great abundance, while **raising horses, cattle, sheep and hogs** is equally profitable. Hundreds of farmers in Western Canada have raised crops in a single season worth more than the whole cost of their land. Healthful climate, good neighbors, churches, schools, rural telephone, excellent markets and shipping facilities. The climate and soil offer inducements for almost every branch of agriculture. The advantages for

Dairying, Mixed Farming and Stock Raising

make a tremendous appeal to industrious settlers wishing to improve their circumstances.

Livestock News Notes

J. D. Rowe & Sons, Davis, lessees of the Alexander and Kellogg herd of milking Shorthorns, have sold a promising young bull to George Need of Galt, and Snowball, white junior bull calf that stood third at Sacramento, to Henry Traynham of Davis. The same firm has sold Duroc boars to John Rodgers, Davis; Eggert Bros., Dixon, and H. McCollough, Dunnigan.

Among recently completed seven day official tests made at the Los Angeles County Farm are three three year old records all above 20.8 pounds butter and 460 pounds milk. A daughter of Beryl Luecke De Kol made the above figures, followed by 21.616 pounds butter from 487.8 pounds milk made by a daughter of Sir Veeman Korndyke Pontiac. Alice Cornucopia Segis Phoenix also made 21,289 pounds butter from 476.6 pounds milk as a junior three year old, she being by a son of Sir Gelsche Walker Segis, one of the very well bred sons of King Segis who has sired two 38 pound daughters. In the long time division a daughter of the senior herd sire, King Segis De Kol Mead, has just completed a junior four year old record of 824.35 pounds butter from 19,711 pounds milk in 12 months. The remarkable thing about this test is the persistency shown as this young cow only made 17.38 pounds butter in seven days. Her yearly record is more than 47 times her best seven days, showing extent to which this strain has been perfected for persistency and continued production. Another daughter of this bull is now on yearly test as a junior four year old and is making a very promising record. This is Whittier Pontiac Netherland 4th that made a seven day record of 28.70 pounds butter last winter. She has now made over 1,000 pounds butter and still has nearly two months of the year ahead of her. A son of this young cow is in service and is getting some of the nicest calves in the county farm herd.

Sultan's Dale, the white senior yearlnig Shorthorn heifer owned by the Pacheco Cattle Company, Hollister, was junior and grand champion at the Pacific International last week.

Prilly Adirondac Dairy Maid, a junior yearling Holstein heifer bred by the Bridgford Holstein Company, Patterson, and sold in the Brentwood sale at Philadelphia last year, won her class at the recent New Jersey state fair.

The livestock judging team representing the University of California at the Portland show placed third. Oregon was first, Washington second, Utah fourth, University of British Columbia fifth and Idaho sixth. The boys composing the California team were A. H. Powers, C. A. Reeves, S. J. Bell, P. J. Webster and C. J. Burnham. The team was coached by Professors Hughes and Howell. It won first honors in cattle judging.

Romie C. Jacks of Monterey, the only California Hereford breeder to exhibit at the Portland show, had the honor of showing the grand champion Hereford female. Ruth Domino, the Jacks two year old, downed all competition including her stable mate, Bocaldo Beauty.

The three highest scoring samples of raw milk entered at the Portland show were exhibited by J. Henry and Burr Farms, Los Angeles, and the Model Creamery, Redlands. Burr Farm won the class for pasteurized milk and for guaranteed milk. Cold Spring Dairy, Pasadena, won the class for certified milk. Other California exhibitors at the same show were: Brant Rancho, Owensmouth; Adohr Stock Farm, Van Nuys; E. D. Simmons, Owensmouth, and the Associated Milk Producers' Association, Holt.

Fifty-two Shorthorn bulls and females made a general average of $255 at the Portland sale. The junior bull calf, Hercules Model, grand champion of the show, sold for $1,575.

Pacheco Lad 215th, the champion Shorthorn bull at the California state fair, owned by the Pacheco Cattle Company, Hollister, was first prize senior yearling at Portland.

Sixty-six registered Holsteins entered in the Portland sale sold for an average of $316. The top of the sale was the cow, Tyee Yucca Johanna, at $1,260.

The Hereford sale held in connection with the Portland show made an average of $267 on the 26 head offered.

J. E. Thorp, the veteran Jersey breeder of Lockeford, represented California in the Jersey classes at the Pacific International and succeeded in landing in the money in the face of hot competition. He won first with his senior yearling bull and senior heifer calf.

The Holstein-Friesian cow, Wisconsin Pride 2d, has broken the record for fat production in the senior three year class of the semi official yearly division, by producing in 365 consecutive days, 29,502.9 pounds milk containing 1,062.35 pounds fat. Her sire is Sir Pietertje Ormsby Mercedes 37th; her dam Wisconsin Pride. She was bred and is now owned by John Erickson. In the senior three year class of yearly division she displaces Lady Aaggie Echo Hengerveld 323463, whose record for 365 days is 28,008 pounds milk containing 960.56 pounds fat. Her 365 day fat production of 1,062.35 pounds fat, equivalent to 1,327.93 pounds butter on the 80 per cent basis, gives her twelfth place among cows producing above 1,000 pounds fat, she being the forty-second Holstein-Friesian cow to gain the high honor of producing more than 1,000 pounds fat in 365 days.

Following the dispersal of Toyon Farm Association herd at Los Altos, last April, Horace L. Hill, Jr., almost immediately began the foundation of another herd, owned by himself personally, but which will be handled under the old name, Toyon Farm Association. Most of the young females comprising the present herd are daughters of Sir Aaggie Mead, the great young sire for which W. J. Higdon, Tulare, and F. S. Borror & Son, Tipton, paid $9,250, and Sir Korndyke Ormsby Piebe, son of Sir Korndyke Hengerveld De Kol 36th and Queen Piebe Ormsby Mercedes, the famous 1136.01 pound four year old yearly record daughter of Sir Pietertje Orms-

by Mercedes. It lately became necessary for Mr. Hill to secure a herd sire, and with a preference for one of Aaggie Acme breeding he finally secured a splendid young son of Sir Aaggie Mead out of Cascade Pauline Mercedes, a daughter of Sir Korndyke Ormsby Piebe that made 940.26 pounds butter from 21,789.70 pounds milk as a junior two year old. This youngster has an average of 1153.09 pounds butter and 24,347.5 pounds milk in one year for five of his seven nearest dams and presents a most promising combination of Aaggie Acme-Mead-Ormsby breeding.

Aaggie Artis Fobes 2nd, a senior four year old owned by G. S. Borror & Son, Tipton, recently made an official record of 26.11 pounds butter from 507.5 pounds milk in 7 days. She is a typey daughter of Sir Bessie Fobes Tritomia and out of a daughter of Mutual Fobes Longfield De Kol. She will be bred to Sir Aaggie Mead and continued on long time test. Baby of Bloom 2nd, also in the Borror herd, made 21.56 pounds butter in 7 days from 551.3 pounds milk, going on test four weeks after calving.

Gracia Pontiac Burke, owned by Burr Farm, Los Angeles, recently made 33.17 pounds butter in 7 days as a senior four year old. She is by King of the Pontiacs 14th and out of Gracia Colantha Burke, a 26 pound daughter of Dutchland Colantha Sir Ormsby and the good breeding cow Alamo, formerly in the Vina Ranch herd.

The great herd of registered Holsteins owned by Frank M. Helm, Fresno, and located on one of his farms near Corcoran, promises to be a prolific source of official test news during the months to come. Herdsman Harry Redd now has 36 head lined up in preparation for freshening, and two heifer records have just now been completed. Helm Lady De Kol Pontiac Burke as a two year old made 18.35 pounds butter from 379.8 pounds milk in 7 days. She is sired by Segis Mead De Kol Burke, a son of Segis Pontiac De Kol Burke and De Kol of Valley Mead 4th. Another heifer, Helm Lady Hiske Mead, made 19.23 pounds butter from 420.7 pounds milk in 7 days as a two year old. She is sired by King Hiske Mead, a son of King Mead of Riverside and Lady Hiske Walker, the 34 pound four year old daughter of Prince Gelsche Walker. Another heifer in the Helm herd, Natoma Hermosa Pontiac, a four year old daughter of King Pontiac Mayflower, lately completed a 305 day record with 702.43 pounds butter and 16,207.3 pounds milk.

Under the capable direction of R. A. Condee, registered Holsteins at California Junior Republic, Chino, awakened a splendid interest in good animals on the part of the boys composing the republic, and under their care the herd progressed until it was the sensation of this year's California state fair. Now the boys are beginning to demonstrate what their cows can do in the matter of production, and a number of very creditable records have recently been completed. Colina Snowflake Korndyke, a junior two year old and the first tested daughter of the grand champion bull, Dichter Spofford Korndyke Lad 5th, placed on test two months after calving made 16.84 pounds butter from 419.8 pounds milk in 7 days. Another junior two year old, Queen Canary Lyons Segis, made 597.21 pounds butter from 15,836.6 pounds milk in 305 days. Ida De Kol Pearl Lyons, their first prize three year old at the last state fair, made 28.16 pounds butter from 588.9 pounds milk and the boys expect to make a big 305 day record with her. Juliana Darington of Rock, one of the foundation cows in the Republic herd, and she is only five years old at that, made 24.60 pounds butter from 457.4 pounds milk in 7 days, and 647.31 pounds butter from 15,975.5 pounds milk in 305 days. She has three heifer calves in the herd and has paid 7 per cent interest on a valuation of $3000 every year she has been in the herd, but she cost less than one-tenth that sum.

A better job of sheep shearing can be done with a power clipper operated by a small engine. Less danger of cutting the animal and more even length of fleece.

HORSE COMFORT MEANS HORSE EFFICIENCY

According to United States Census Bureau figures for 1920 there are 465,419 head of work stock in California. These figures would indicate a vast amount of farm power being furnished by animals in this state. If this power is to be developed to its greatest efficiency and economy there are several important things to be considered.

The humanitarian side of the application of animal power is most to be considered. It is not reasonable to expect work horses to develop the maximum of power or to complete a high average task in a given time in an efficient and economical way unless their comfort is given careful consideration.

After giving horses the advantage of proper feed for development of strength, conservation of that strength should be guarded by careful attention to the weather conditions under which they are working.

These are simple facts which will be recognized as important, but perhaps one of the most vital features to successful work with horses is the harness.

Poorly fitted harness will cause sores and fretting, which reduce the efficiency of the team. Don't work your horses with a hardened or worn out collar or one with holes in it. The collar is the most important part of the harness, and a right fitting, easy working collar is due the horse and may save a sore shoulder or a sweeney.

If your dealer has your best interests at heart he will sell you only harness bought from a well known, dependable manufacturer who has a volume of business large enough to get the best the market affords at right prices. To insure long life to harness, curing of the leather is an important factor. Cheap split leather harness is generally unsafe and expensive in the end. Workmanship counts, of course, but machinery has become so human in its working that the machine made harness has advantages over the old time hand made harness both in quality and price.

It is important to give careful attention to keeping harness in repair. Your dealer can supply you with the necessary findings and with soap for its cleansing and softening.

MILK SHEEP WORTH EXPERIMENTING WITH

This is the first year I have taken the California Cultivator, but, believe me, as long as I am interested in agriculture I will not do without it. It is fine.

I wanted to ask you a question. I know America imported from the Old World nearly everything that was worth importing and improving. So it did with goats. Still there is in Holland a sheep they call the Frisian milk sheep that I think is worth trying over here. It gives much more milk than a goat, is much bigger than any other breed of sheep and will be healthy in low places where a goat gets sick. They feed it over there on weeds and grass on the roadside, some hay and linseed cakes. As far as I know they have only one vice, they are not very gentle or timid like their sisters, so little children should not come near them without the man that handles them.—M. Van Tonningran, Capitola.

STOCKYARDS UNDER PACKER ACT

Fifty-four stockyards in almost as many cities throughout the country were posted November 1 as coming within the provisions of the packers and stockyards act. Under that act the secretary of agriculture will exercise supervision over transactions in these stockyards. In addition the department is preparing and will soon have ready for distribution tentative regulations governing the stockyards, commission men and other market agencies which operate at the stockyards. The packers and stockyards administration of the department invites criticism of these regulations and is arranging for a series of hearings. During the two weeks beginning November 7 hearings will be held at Fort Worth, Kansas City, Denver, Portland, Oregon, and Chicago.

Choose a little larger engine than you think may suffice to do your work. It means less wear and tear on your engine, longer life, and when you need extra power you have it.

"Drudgery" on the farm is lack of foresight and in not applying easily obtainable power to heavy work being done by hand.

The question of a regular water supply for stock is answered by the gas engine.

Cattle News to Date

By A. L. Spellmeyer

THE weekly market report for Southern California by the cattle association quotes sales of Arizona grass steers at $6.50, weighed Los Angeles, and of beet top cattle at $6.65, f. o. b. Los Angeles.

These prices are paid for lots to certain men and are not being paid for a few cars here and there. A car of steers sold at $5.50 near Calabasas, and various lots of cows run at bargain prices with no demand in early November, but the buyers of these cheap cattle admit prices must change by Christmas, and some figure eight cent January and February beef. The cattle association gives California shipments to Los Angeles as 516 for the last week in October, as compared to 6,976 head shipped in from other states. The total of 7,492 for that week as compared to 4,629 for preceding week shows packers stocked up when the strike threatened. That is also a probable reason for slow sale of good California fed cattle in early November.

Good steer carcass beef can be bought for 11 to 11½ and cremo cows for 10 cents. The packers' list has been merely something to cut from in carcass trade. The killers taking on the cheap lots of good feed 55 per cent dressing out steers at 5½ to 6 cents have on the 11 cent carcass beef price been clearing $12 up her head over slaughter expense, while the producers of those steers dropped about $40 for every head, and in some cases more.

A few weeks ago the plant of H. F. Lewis, Inc., burned down. This plant was killing for commission men and peddlers or anyone who went out and bought cattle or owned them. They charged so much per head for killing and a half cent per pound for selling the carcass meat. Anyone who had cattle could market them at this plant, and at one time I tried it, but the difficulty I found was that in order to sell the meat one had to cut regular existing carcass prices about 10 per cent. Mr. Lewis made every effort to interest cattlemen in his plant and at one time it was thought the cattlemen might purchase the plant for a marketing effort, but result did not materialize. Although the cattle association persistently advises against commission killing, Mr. Lewis stood very well in the opinion of many large cattle owners.

A few days ago the California Dressed Beef plant, owned by Bliss, burned down. This plant did what was probably the largest meat volume business in Los Angeles and it was, like the Lewis plant, independent. It bought cattle and the bulk of its trade was small lot distribution. Mr. Bliss is considered the best packing house man in California and only a few years ago started to compete for the big bulk meat trade of this city.

The destruction of these two meat plants, both independents, put the bulk meat supply again in the hands of line packers. These two plants were hard competition for the line packers, with their heavier overhead, and kept carcass prices down in this city. What may come in November and December we don't know, but it is certain that if four packers here wish to do so they can advance carcass beef price, and such an advance would make possible a better price to the cattle raiser and fattener. While there is today an apparent $12 per head in 11 cent steer carcass beef on a 5½ cent base, on a 7 cent base there was a loss. A higher carcass price for packers and killers is necessary under present conditions to a material cattle advance.

The best top cattle have had fine, clear weather for feeding, without rains or cold, which greatly helped them in gains. The Globe yards are full up.

These Globe cattle, 6,000 or more of them, are reported to be costing 35 cents per day, according to rumor. What I have seen fed before took 90 to 120 days, depending on condition on arrival. If I were figuring it I would assume 100 days on a steer weighing 800 pounds, feeding cost $35, and probably $4 freight, and final weight 1,050 pounds. I would assume at a cheap buying price six weeks ago a steer cost $45 plus $5 freight, interest, etc., and plus $35 or, when finished, about $85. Now killers are loaded up heavily and doing this feeding, and these steers will equal better than $7.50 in cost. However, they serve the purpose of an immediate supply that makes a packer immune from price advance and give a kill supply that permits cheap prices for cattle that have to sell, and this home supply acts as a market maker. The inference exists, however, that prices will receive a boost by the time these cottonseed fed cattle are ready to go, carcass prices surely, or they would lose the killers money, and we never see that happen.

In the general cattle and livestock and farming industry three noteworthy things have happened in the last few weeks. One is the distribution of some $22,000,000 of war finance money, the second is the consideration of taking control of public range lands and lease thereof by the government, and the third is the packer entry into retailing of meat. Everybody is for the war finance help. As to the leasing and control of public range and domain it has already started a roar of those outfits who use vast acreage without any control or payment and who graze it to depletion.

La Rue, the government engineer, who made what I consider one of the closest surveys ever undertaken during the war of Arizona cattle supply and numbers, was one of those who inevitably arrived at the one conclusion that it takes many cattle to make a living for a family and several thousands of acres to supply those cattle and that the present 160 to 320 acre homesteads are in semi-arid range districts unprofitable unless several hundred cattle can be run under fence and unless several thousand acres are possible to lease and control at a minimum cost. This range leasing matter if handled right can make the livestock industry of this country, but it permits a danger also. Right or wrong it will be fought as the forest reserves were first fought, but the same men who fought forest reserves now fight for them.

The permission of the government to permit packer retailing is a logical completion of the step of packer operation at a time a cure is needed for retail greed. Most association opinion current among individuals rather favored the packer established retail markets. Opinion in most livestock circles, and that doesn't mean among cattlemen only or among part of the cattlemen represented in associations, seems to be that the time is ripe for the cattlemen and packers to work out a mutual plan of salvation and that we should work with present conditions, as the citrus men work, rather than change the economic structure in our resoluting.

ANNUAL MEETING OF THE HORSE ASSOCIATION OF AMERICA

From Maine to California, from Canada to the Gulf, members of the Horse Association of America will gather at the Hotel Morrison, Chicago, for their annual meeting on November 30. Stockmen whose cattle furnish hides that go into harness and saddles, packers, tanners, saddlery manufacturers, accessory manufacturers who make buckles, snaps, bits and other harness accessories by the billion, wagon and carriage builders, hay, grain and feed dealers, horseshoe manufacturers whose output runs into millions of kegs of horseshoes annually, farriers, veterinarians and breeders of every known breed of horses, jacks and mules, will meet to hear the reports of their officers and consider ways and means to extend the breeding, raising and use of horses and mules.

EFFICIENT TO THE END

"Yes," said the traveler, "my wife's mother was an admirable housekeeper. Poor soul, she was eaten by cannibals in Africa."

"You don't mean it?"

"Alas, it's true! Why, when the savages had thrust her into the cauldron and she was beginning to cook, she cried out faintly with her last breath: 'Don't forget the salt and pepper'!"—Houston Post.

CHESTER WHITES OR O. I. C.

FOR many years there has been more or less friction between breeders of Chester Whites and other breeders of Chester Whites who have bred and sold under the name of O. I. C. or Ohio Improved Chesters or Famous O. I. C., terms which have been coined by one concern in Ohio and used with promises of superiority for its particular strain, more recently with that particular "breed" which the concern desired to create. Other breeders of Chester Whites than those who were affiliated with the O. I. C. concern asked that the practice be discontinued, and ultimately the matter was carried up to the federal trade commission, before which it was shown that the L. B. Silver Company had sold O. I. C.'s as a separate breed though the O. I. C. was still exhibited at fairs in competition in the regular Chester White classes. Further, the claims had been made "not liable to cholera" and "resistant to tuberculosis and other diseases." These latter claims have been shown to be entirely not founded on fact. In the endeavor to establish this claim it had been asserted that there has been "no cholera, foot and mouth or other contagious disease in our locality for over 50 years," to which the commission's finding of fact replies, "This statement is not true."

The Commission Finds

"The federal trade commission having issued and served its complaint herein wherein it allowed that it had reason to believe that the respondent, The L. B. Silver Company, had been, and was at the time of the issuance of the said complaint, using unfair methods of competition in interstate commerce in violation of the provisions of section 5 of an act of congress, approved September 26, 1914, entitled, 'An act to create a federal trade commission, to define its powers and duties and for other purposes,' and that a proceeding by it in respect thereof would be to the interest of the public, and fully stating its charges in this respect, and the respondent having entered its appearance by White, Johnson, Cannon and Speith, its attorneys, and having filed its answer to said complaint, and the issues so raised having, pursuant to due notice given respondent, come on for hearing before a duly authorized examiner of the commission, and testimony having been introduced in support of the charges alleged in the complaint, and the respondent having appeared in person and by attorney and introduced its evidence in denial thereof, and the attorney for the commission, and the attorneys for the respondent having submitted briefs and oral arguments herein, and the commission being duly advised in the premises, and upon its consideration thereof having made its report in writing wherein it stated its findings as to the facts and its conclusion that the respondent has violated the provisions of section 5 of the act of congress, approved September 26, 1914, entitled 'An act to create a federal trade commission, etc.,' which said report is hereby referred to and made a part thereof;

"Now, therefore, it is ordered that the respondent, the L. B. Silver Company, its officers, directors, agents and employes cease and desist from representing, in interstate commerce, to the public, by circulars, pamphlets, catalogs, trade journals, periodicals, newspapers or otherwise:

"1. That the so-called Ohio Improved Chesters, or O. I. C.'s, or Famous O. I. C.'s, are a breed of hogs separate and distinct from the Chester White breed of hogs;

"2. That it has Chester White pigs when it has none, and upon receiving orders for Chester White pigs refusing to fill these orders and instead urging the intending purchaser to accept in lieu thereof O. I. C. pigs;

"3. That the so-called O. I. C. pigs, as a breed, or otherwise, are not liable to cholera, foot and mouth disease, tuberculosis and other contagious diseases; that there has been no cholera, foot and mouth disease, tuberculosis or other contagious diseases in respondent's locality; that the O. I. C. pigs possess a power to resist disease in a degree unknown to other breeds; that in localities where contagious diseases have swept off the dark and black hogs the O. I. C.'s were unaffected; from in any way representing to the public that the O. I. C. pigs are

CHESTER WHITES OR O. I. C.

(Continued from Page 541)

more resistant to disease than any other breeds of hogs;

"4. That in the shipment of livestock the respondent enjoys or has enjoyed, either or both, from express companies rates of transportation lower than the rates granted to other shippers of livestock by the said express companies.

"5. That two of its hogs weigh 2,806 pounds, that such hogs are in existence, that their progeny is for sale by the respondent."

QUESTIONS AND ANSWERS

(Continued from Page 534)

prevent it another year.—Subscriber, West Berkeley.

There were some yellowish spots on the leaves which were badly dried when they reached us. It is possible the cause of the dropping is the season of the year, which would naturally make them drop, or it might be due to a gravelly soil or other condition in that section of the orchard which has denied them the water needed even in the fall of the year. Again it may be natural for this variety to drop its leaves at this time. However, thinking there was a possibility of fungous trouble, the leaves were sent to Prof. H. S. Fawcett of the experiment station at Riverside, and he writes: "I have examined the fragments of apple leaves carefully but have been unable to find anything on them that would account for the condition spoken of. I am wondering whether at this time of year some of the older leaves are not falling off from natural conditions rather than the effect of any particular disease."

TEN MILES OUT

The Associated Grower is responsible for this:

The towns are swarmin' with folks these days. I got up before breakfast the other day and saw a fellow cutting across my vineyard.

"Are you a hunter?" I hailed him.

"Yes."

"Just going out, eh?"

"No. Coming in. And didn't get a thing."

"It's all hunkydory you didn't," I says. "Didn't you notice the sign, 'No shooting'?"

"Ha, ha!" he laughed dryly as he stepped over the fence. "I was out house hunting."

Legal Queries

Louis B. Stanton, attorney, 343 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 317 Central Ave., Los Angeles.

Right of Way

A road is desired to run along a section line. One of the property owners will not give the necessary 30 feet along his ranch. Is it necessary to buy his land or is he compelled to give the 30 feet?—Subscriber, Modesto.

Land may be given to the state for such purposes but no one can be required to do so. On the other hand, land may be condemned by the state in a suit brought in its name and upon payment of the value thereof, which the jury may award, the land becomes subject to road purposes.

Title to School Land

How does one proceed to obtain title to state school land?—Subscriber, Eureka.

It is necessary first to make affidavit that the applicant is a citizen of the United States or has filed his intention to become such, that he is a resident of this state, of lawful age, and that he desires to purchase the described lands, of which he has made personal examination; that there is no adverse occupation of the land; that he desires to purchase the same for his own use and benefit and has made no contract to sell the same. The affidavit must also state whether or not the land is suitable for cultivation and if it is, that the applicant is an actual settler; that he has not entered school land, which, together with the amount stated to be purchased, exceeds 320 acres, or if the land is not suitable for cultivation, then the affidavit must state that he has not entered in excess of 640 acres. This application is filed in the office of the surveyor general and retained 90 days. Within such 90 days the applicant must answer such interrogatories as may be placed by the surveyor general, and if it is found that the land is open for sale and the application made in good faith by a qualified entryman it shall be approved. On notice of the approval the purchaser must within 50 days from date of approval pay the county treasurer of the county wherein the property is located 20 per cent of the principal of the sale price of the land. Some of these lands are of a value of $1.25 an acre; other $2.50; and other timber lands of a higher value. The remainder of the purchase price is made payable subject to the subsequent act of the legislature. When full payment is made a patent signed by the governor is issued.

Public Utility Service

A dispute arose as to service of public utility corporation. The customer, pending settlement, did not pay his account for upwards of a year. Can the company require him to pay the whole amount at once or can he take the matter before the railroad commission?—Subscriber, Roseville.

Undoubtedly the company could bring action to collect the amount which it claims to be due. In such action the consumer could set forth his claims in respect to the delinquent service and have the matter determind by the court wherein the action is filed. If the consumer has cause for the belief that any appliance used in the measurement of his service is incorrect he may have the railroad commission test it. In case the appliance is defective the utility company must pay the costs. A shorter method of operation would be to set forth your claims before the court wherein the action by the utility company is taken than to involve the railroad commission.

Private School

Can a child under eight years of age be required to attend school? What steps shall be taken if I desire to place my child in a private school?—Subscriber, Roseville.

The compulsory education law requires the attendance at school of children between the ages of eight and 16 years. If it is desired to place the child in a private school it might be well to notify the superintendent of schools of the school in which you desire to place the child. That would end any possibility of having the child brought up by the truant officer.

Complaint of Assessment

How may I present a complaint concerning my taxes, to whom, and when does the tax equalization board meet?—Subscriber, Roseville.

The best method to avoid difficulties in respect to taxes is to submit to the assessor a statement of the property to be taxed and, in case of personal property, the estimated value thereof. The assessor values real estate and improvements. If you disagree with his valuation you may appear before the board of supervisors, sitting as county board of equalization, between the first Monday of July and the third Monday of July of each year and there file your complaint concerning the assessments which you consider unjust. This application need be in no particular form other than to clearly state the point at issue. On hearing of the application, the board may hear witnesses, take such evidence as it may deem proper, and either raise or lower the assessment.

Grocery Bill

A party owes a grocery bill which he has not paid for four years. Can it still be collected.—Subscriber, Palms.

The account is undoubtedly outlawed both as an open account wherein the statute runs for two years and as a book account. If the merchant has kept books, consisting of one or more entries, the statute in such case runs for four years.

Veterinary

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Blvd., Los Angeles, are without charge. For immediate mail answer remit $1.00. In writing questions give full symptoms or particulars of injury of animal.

Skin Trouble

I have a horse that has a rash on the head and body and also breaks out in large lumps or pimples the size of a bean when he is heated up, but these disappear when he cools off. He seems restless and bites and rubs his body and tail. Have used sheep dip several times but it seems to do no good. Would the zenoleum treatment do for him? He is the only one in the corral so affected. Will others catch it?—Subscriber, Santa Ana.

Zenoleum is only a sheep dip but we think it is a little better than the rest. If the others have failed it would probably fail also. When using any of the skin remedies one should clip the animal and brush the skin clean before using the remedy, so it can soak well into the skin. You had better try giving a small handful of Epsom salts in the feed once a day and also get a pint of Fowler's solution of arsenic and give a tablespoon of it in the feed once a day.

Worms

I have a seven year old horse that has been in poor condition for over a year. He had scours continually and was not able to work. Last April I had a good veterinarian examine him and he found the teeth sharp and fixed them and also gave him some medicine for the stomach, but he is very little better. I have had him on pasture. He eats well now and has no scours but is not doing well. He never had colic and his water is all right. What would you advise doing for him?—Subscriber, Encinitas.

He may have worms. Mix 10 pounds common salt with 1 pound fresh wood ashes and give a tablespoon of the mixture in the feed morning and evening. Also get these powders of your druggist: Gentian, ginger, nux vomica and bicarbonate of soda, of each 2 onces, and enough cornmeal to make 1 pound. Give a teaspoon of the mixture in the feed morning and evening after you have given all the salt and ashes.

Cow Ailing

Cow about seven years old is not doing well. When she comes to the water she hesitates and finally after tasting several times will dive in and drink a large amount. She eats sugar beets well but cares little for grass or other feed. She is falling off in flesh and in her milk. What remedy would you advise giving her?—Subscriber, Arroyo Grande.

She acts like a cow that had eaten some nails or other indigestible things and they are in the stomach and will not pass, or she may have an aching tooth. If there is someone near who understands animals have him examine the mouth. You might try giving her a mixture of 10 pounds of salt with 1 pound of fresh wood ashes. Give a tablespoon of the mixture in the feed morning and evening.

Losing Cud

We have a cow that is losing her cud. That is, we have to remove it every time we feed her. She has been that way for a week or longer. We had a veterinarian examine her and he said she had a sore tongue. He gave her some medicine but it has done her no good. Kindly tell us through the Cultivator what you think is wrong and what to do for her.—Subscriber, Newman.

The sore tongue may be caused by barley beards or sharp teeth. A veterinarian should be able to find the cause of her holding the cud in her mouth. Sometimes a loose or split tooth will turn out toward the cheek and a wad of feed will gather over it which will make it appear that the cow is holding the feed but she cannot get it out without help. The trouble is probably where you find the cud. Examine it again and let us know what you find.

Mange

Is there any known remedy that will cure mange?—Subscriber, San Jose.

Yes, mange can be cured. It is due to a very small mite that burrows in the skin, attacking a spot in colonies, spreading as the number increases. Ordinarily medicine applied to the surface does not reach them. They must have air to live, so if you can shut off their supply of air they must die. About the simplest and most effective way of combating them is to clip off hair and scrub parts with soap and

Longer Life For Tractors

Wagons, Silos and Farm Implements

PROPER paint protection will preserve your farm tractors, vehicles, silos and various agricultural implements and machinery. Such protection is vitally important to you because it is economical.

Constant exposure to all kinds of weather tends to materially deteriorate the usefulness of all farm implements and buildings. A protective coat of good paint will make them last longer, look better.

Buy Good Paint

Always buy the best paint—it is more economical—it costs less in the end.

Good paint is easier to spread and so goes farther. Besides it lasts five or more years longer than cheap paint, and always looks better.

So when you figure *labor, square yards covered, lasting qualities* and *appearance,* cheap paint is a great deal more expensive than good paint. It pays to invest in quality, when quality means *economy.*

Remember that Fuller makes a "special paint for every purpose." No matter what you have that needs painting there is a Fuller product made to cover it.

Here are but a few of the many Fuller paints that make for economy on the farm.

Pacific Wagon Paint: Adapted for repainting Agricultural Implements, Farm Wagons, Farm Machinery, Windmills. A glossy and durable finish offered in seven colors.

House Paint: Pure Prepared Paint, Phoenix Pure Paint for Painting Houses. . The purest, best protective and most durable paint made. Made in 32 colors.

Barn and Roof Paint: A protective coating for Barns, Roofs, Fences. Dries with a good gloss and wears. Economical in cost and dependable in quality. Six colors to select from.

Rubber Cement Floor Paint: A sanitary, waterproof and durable paint for floors and kitchens, closets. Attractive in color and gloss. Dries hard over night. Made in 12 colors.

Also makers of Decoret, Washable Wall Finish and Silkenwhite Enamel.

Since '49

For 72 years Fuller has been making "paints for every purpose."

This experience means a thorough knowledge of paint manufacture and has resulted in skill, second to none, in mixing the very best of materials to obtain only the best products.

Fuller's Pioneer White Lead base is finely ground pure white. It must pass through a silk screen with 40,000 meshes to the square inch. We use special machines for mixing the materials in scientifically exact proportions. Fuller products are famous for their covering capacity, ease of spread and great durability.

Try Fuller's—a western paint for western use—a paint *you know.*

Free Advice on Painting

If you cannot get a master painter, and wish to paint your home yourself, but do not know much about painting, ask Fuller's Specification Department for advice. How to treat the old paint. What color scheme to use. How many coats. The proper brushes. The best time to paint, etc.

Take advantage of Fuller *Service* as well as Fuller Paints.

Write us *now.* Take steps to *paint now.* Don't let weather depreciate your investment.

AN ENGLISH EGG LAYING TEST

By Jean A. Koethen

IN ENGLAND, it seems, they call them tests instead of contests, and the test which is announced to begin on the 23rd of November, 1921, will run for two years instead of one, so it will be a real test of the hen's ability, not only to lay but to keep on laying.

The Daily Mail Two Years International Egg Laying Test will be the first international egg test ever held in England, the first two year test which has been undertaken on a large scale and the first test in which a prize of 500 pounds has been offered for the leading pen. The first prize of 500 pounds will be awarded to the pen which lays the largest number of first grade eggs during the first year of the test.

As the name indicates, the test is held under the auspices of a newspaper, the Daily Mail, but the announcement states that this test is "organized by the Daily Mail in cooperation with the Great Eastern Railway Company" and will be carried out at the Great Eastern Railway Farm at Bentley, Suffolk, under the supervision of J. N. Leigh, poultry adviser to the Daily Mail and the Great Eastern Railway and joint author of the Daily Mail Poultry Book.

Entries

Each entry shall consist of one pen of eight pure bred pullets of the same variety of one breed, hatched not earlier than the first of January, 1921. The entry fee is 5 pounds and the number of entries that will be received is limited to 200.

All birds must be in good health. If any are found not in good health the pen will be returned and half the entrance fee handed over to St. Dunstan's Blinded Soldiers' and Sailors' Funds.

The Daily Mail reserves the right to mate up in the second year of the test and breed from all or any of the pens and to hatch, sell or otherwise dispose of the eggs or chickens therefrom upon such terms as it may think proper, but subject to the distinct understanding that such eggs and chickens shall only be supplied to discharged or disabled soldiers and sailors or such persons as may prove to the satisfaction of the Daily Mail that they are not in a position to purchase from specialist breeders eggs or chickens from good laying strains; that the number of eggs or day old chicks disposed of to any one person shall be limited to one dozen and that ten per cent of the amount received from the sale of eggs and chicks shall be applied to and form a prize fund to be awarded to the 23 best pens in the second year of the test.

As American and Canadian entries can be received only up to November 1 no one who reads this notice for the first time will be able to compete, but the rules of the contest are of interest as showing the high standard set by our English cousins. Especially notable is the rule for grading eggs according to weight:

"First grade eggs during the first four weeks of the test shall be those weighing 1⅝ ounces or more; for the second period of four weeks, those weighing 1¾ ounces; for the third period of four weeks, those weighing 1 13/16 ounces or more; for the fourth period of four weeks, those weighing 1⅞ ounces or more; for the fifth period of four weeks, those weighing 1 15/16 ounces or more; and for the remainder of the test those weighing 2 ounces or more."

FOR THE IMPROVEMENT OF POULTRY STOCK

County Agent Russell T. Robinson of Alameda County writes:

"The progressive poultrymen of the Hayward district were ambitious to establish a reputation for the quality of the chicks produced from their locality. The poultry department of the Alameda County farm bureau formed a committee of breeders and hatcherymen to formulate a plan to accomplish this.

"The result has been that an agreement was drawn up by the breeders and hatcherymen whereby the breeders bind themselves to have their breeding flock inspected by an inspector employed by the poultry department and approved by the representative of the U. S. department of agriculture and the University of California. The birds must be without blemish and must conform with the standard for the breed. The flocks are to be inspected during the months of September, October and November and all hens not laying during at least one of these three months are rejected as breeding stock. It is required that there be no roosters with the hens that do not pass inspection, and any eggs produced by these hens until such time as they are eliminated from the flocks, are to be sold as market eggs only. Roosters before being placed with the inspected flocks are examined and passed on according to their capacity, vitality and conformation to type.

"The hatcherymen agree to take only eggs from inspected flocks and the chicks hatched from these eggs are sold with a certificate guaranteeing these chicks, so that the buyer will know he is getting chicks from approved stock.

"One advantage of this agreement is that it assures the poultrymen stronger and better chicks than before, since the eggs produced by inspected flocks are taken only from those hens laying during the months of September, October or November.

"The committee composed of A. M. Hinman, chairman, R. R. Graham, P. A. Day, Graham Barber, Harry Tolle and Geb. F. Campbell have worked unceasingly, and no effort has been spared to work out a plan which would bring positive results. To date about 20,000 hens and 500 roosters have been inspected.

"This plan of improving the poultry stock has aroused interest in every section where people have known of it and inquiries are coming in to the farm bureau office regarding this practice. It is a practical guarantee of the best quality of chicks procurable and people getting them will know they are produced by the best stock to be had."

To keep thoroughly posted subscribers should read every advertisement in the California Cultivator columns.

combined. This topic is a difficult one to handle and to those with sensitive minds it does not meet with favor.

Carelessness and individual opinion are the two principal offenders in egg grading or grading eggs for profit. In using the words of one of the leading minds upon the subject he relates: "There are differences of opinion among egg shippers as to the relative profitableness of shipping mixed qualities as received, making a casual assortment as to size and cleanness, or making a more rigid grading. Anyone who watches the wholesale marketing of eggs in a big city is able to appreciate the value of an established reputation for dependable high quality. This can, of course, be furnished only by careful grading, in which the highest grade must be closely guarded from the admission of any defective eggs as judged by critical trade in the market to which they are sent."

Our experience in the packing and grading of eggs is only a repetition of the experience of those engaged in other lines of business; that is, it pays to do anything a little better than the other fellow. Anyone can grade eggs carelessly or merely rehandle without grading, but it takes experienced help, constant application and honesty of purpose to pack a premium egg.

Experienced help is absolutely necessary to secure uniformity in grading.

Constant application of grading rules is also necessary to secure this same uniformity.

Honesty of purpose to avoid temptation to put too small an egg in once in a while, or a large slightly dirty one, and to secure the confidence of the receiver so that he will know when he sees a car of our mark that every case of eggs therein is a case of eggs all the way through.

Your management has worked very hard on the matter of grading in the face of much discouragement. Many members from time to time have seemed unable to grasp the true significance of strict grading and the value of establishing a permanent reputation for a standard product. One of the main objects of this association and every other farmers marketing organization is the standardization of the product. This means not only improved grading, but selling according to grade, so that the producers of high class eggs may get the real value of them instead of having to sell them at a price based on the market for inferior goods. A well graded product is actually worth more than a poorly graded one and people will pay more for it.

CALIFORNIA FARM BUREAU EGG LAYING CONTEST

The pullets in the third annual California Farm Bureau Egg Laying Contest at Santa Cruz finished their first month with a production of 39.25 per cent or at the rate of 12.17 eggs per hen for the 62 entries of ten hens each finally qualifying for entry. Toward the end of the month a number of the birds developed a neck moult and production decreased somewhat.

Full report of last year's contest is not ready, but we announce that entry of Hanson Paultry Farm of Corvallis won with a grand total of 2,440 eggs, or an average of 244 eggs per hen. Hollywood won high individual hen with a record of 298 eggs.

Full report of last year's contest is always a difficult one for both fowls and management. The birds come into new and strange quarters, they come from many localities, and, in California especially, from rather a wide variety of climatic conditions. They must go through a period of readjustment and the effect upon some of the entering pullets may be such as to cause the management a great deal of worry and subject it to much unjustifiable criticism from owners of birds. To prevent outbreak of chickenpox 744 pullets were vaccinated. Epsom salts was administered in the drinking water October 23 and 25. The stock tonic recommended by the poultry division was also administered in the first 800 pounds of mash fed as an aid to birds during the initial readjustment period. During the latter part of the month the tobacco treatment for worms, as recommended by the poultry division, was given.

Electric lights are being turned on at 5 A. M. and the pullets find enough

"Tests on Oldsmar Heater show 100% Efficiency."—Prof. Peeples of Armour Institute

Frost Insurance at Minimum Cost

You insure your house, why not your crop? Fruit growers everywhere can have assured crop protection through the use of this improved and efficient heater which has a number of notable advantages over any other kind.

Oldsmar Frost Protector Costs Less To Operate

Five gallons of distilate fuel oil burns 10 to 15 hours according to temperature desired.

All cast iron (stack excepted), the Oldsmar is waterproof and cannot get out of order. Lighted instantly, it requires little attention and temperature regulation is positive.

An Oldsmar costs less than other cast iron heaters, lasts longer, requires fewer to the acre; affords complete protection — California and Florida grove owners and truck farmers are ordering them by thousands.

Write today for literature and full information about how the Oldsmar can protect your crop

HAY AND FEED

Alfalfa Growers of Cal:
Choice Dairy Alfalfa 16.00
Standard 15.00
A. W. Scott Co. says:
Arrivals past week, 760 tons, as compared with 160 previous week. Prices of all hay have advanced slightly, not from demand but to cover warehouse charges, as practically everything is out of the fields and supplies must now come from stored stocks. Alfalfa is in best demand and has again advanced. Shipping call has been strong and consumers here and all over the state are buying, though moderately. A heavier movement than we have yet seen is now evident. The greater part of Nevada hay carrying freight rates available to this market has changed hands, much of it for southern parts of the state. California stocks are comparatively light and held at figures higher than the Nevada offerings. Millfeeds first responded to a strong spurt in Eastern grains, but with their later drop have slumped back and close dull and weaker. Linseed meal is still absent. Coconut stocks are light and demand active. Alfalfa meal is stronger as hay advances.
We quote today wholesale prices in carload lots as appear from dealers' transfers upon the markets in San Francisco (for prices to consumers, charges of switching, cartage, commission and handling expenses must be added, according to conditions).

Citrus Markets

Los Angeles, November 16, 1921.

The Valencia season is closing with exceptionally strong market condition. The shipping of Navels is beginning, but none have yet appeared in auction and the market reception of Navels is not known. They have been running somewhat under color though it is hoped the period of transit will finish them off in good shape. The sugar content is generally declared sufficient.
The lemon market is exceptionally quiet and prices are not satisfactory.

Shipments

Shipments of citrus fruits to date since November 1, 1921, Southern California: Oranges, 368 cars; lemons, 191; total, 559. To same date last season: Oranges, 106; lemons, 207; total, 313. From Central California to date this season: Oranges, 19; lemons, 8; total, 27. To same date last season: Oranges, 11; lemons, 9; total, 20. From Northern California to date this season: Oranges, 4. To same date last season: Oranges, 6; lemons, 1; total, 7.

EGG LAYING CONTEST

(Continued from Page 545.)

grain in the litter from the feed of the previous night to keep them busy till 8:30, when they are given the morning feeding of the scratch mixture consisting of 6 pounds barley, 9 pounds wheat and 15 pounds cracked yellow corn scattered in a deep straw litter. At noon as much moist, crumbly mash is fed as the fowls will clear up in 10 minutes, using the dry mash formula. The night feeding consists of the morning scratch grain mixture plus 20 pounds sprouted barley. A dry mash consisting of 250 pounds bran, 180 pounds middlings, 80 pounds ground oats, 100 pounds cornmeal, 60 pounds fishmeal, 60 pounds meat scrap, 40 pounds soybean meal, 40 pounds sifted salt, is kept before the birds in dry mash hoppers.

Poultry Queries

Conducted by Jean A. Koethen

Turkey Partnership

Please explain fair way of dividing turkeys when two parties go into partnership, one furnishing breeding stock and eggs, the other hatching and feeding and raising young stock up to time of fattening.—Subscriber.

The party who furnishes stock and eggs should put them in at current prices in your neighborhood; the other party will have to keep careful account of what he spends for feed and of the time he spends in working with the turkeys, charging current wage for such labor, whether it be by hour or month. If he raises feed or provides range that also should be charged up at a rate agreed on by both parties. At the end of the time agreed upon—in this case at fattening time—the turkeys should be distributed proportionately. For example: A puts in 20 hens worth $5 each and 2 toms worth $10 each, and 50 eggs at 50 cents each, a total of $145. B spends 2 hours a day for 2 months and 1 hour a day for 4 months caring for this stock and their offspring, a total of 240 hours at, let us say 50 cents per hour, making $120. He also spends $75 for feed and puts in green feed at an agreed valuation of $10, making his total contribution to the partnership $205. If he is obliged to build a brooder house or purchase hens for hatching, this expense must be added but the exact value of each would have to be settled between the partners because hens and brooder would be a permanent investment and could not properly be charged in as a whole. Let us say for convenience that A's total contribution is $120 and B's $240. A would then get one-third of the young stock and B two-thirds. These matters are more often arranged in the lump than by going into such careful details, but each party must have a pretty clear idea of what all these items are worth or there will be dissatisfaction.

Fattening Turkeys

Would molasses beet pulp soaked be a good feed for hatching turkeys or would plain pulp be better? Is boiled barley and milo better than the uncooked grain for fattening?—Subscriber, El Cajon.

I have never heard of beet pulp or boiled grain being used for fattening turkeys. Whole or rolled barley and cracked or whole corn are the standard feeds for this purpose. Milo is sometimes used, but Indian corn is better.

Sick Turkey

I have a turkey three months old which was taken with diarrhoea, then for several days before it died it drew its head back, would scarcely eat and its wings drooped. What was the trouble?—Subscriber, El Cajon.

If you made no post mortem examination it is impossible to say whether the bird had blackhead or indigestion. That drawing back of the head indicates severe intestinal disturbance and is not usually connected with blackhead. Yellowish spots on the liver almost invariably indicate blackhead, and this disease cannot be diagnosed with certainty without a post mortem. A sudden change in the ration sometimes produces severe indigestion and diarrhoea.

Probably Chicken-Pox

A Buff Orpington hen has some kind of growth on her wattles and it is beginning to appear on the comb. The growths look like rough, hard nodules, and there are several bunches of them. There is no odor; hen eats well and comb and wattles are of a healthy color. I have shut her away from other birds.—Subscribet, El Cajon.

You did well to isolate her. She has apparently a light case of chicken-pox, and you may have difficulty in keeping it from the rest of the flock. Do not carry anything from her pen to that of the others and be careful about your clothing for chicken-pox is infectious and the germs are easily carried and persist for a long time. It would be a good plan to give the whole flock a little sulphur in their mash—a pound of sulphur to 50 pounds of mash is the dose recommended—or you might write to Poultry Division, University of California, Berkeley, California, about vaccination. The poultry division does not recommend vaccination of a whole flock if it can be avoided, because of the expense, but it might be well to communicate with it if other cases develop.

SUN MAID GROWERS

The Associated Raisin Co. has made another change in name and now becomes "California Sun Maid Raisin Growers."

From the account of the change in the Republican we quote:

"Trustees of the California Associated Raisin Company at a meeting yesterday passed a resolution previously approved by the directors, which changes the time honored name of the greatest cooperative organization in the world to the 'California Sun Maid Raisin Growers.'

"Announcement of the raisin company's intention to change its name to the California Sun Maid Raisin Gowers was made by President Wylie M. Giffen following the trustees' meeting. No intimation of the change had previously reached the public.

"As explained by Giffen, the purpose of the change in the association name is to capitalize the advertising value of Sun Maid in the future and also to bring into the name of the association the word 'growers,' which carries with it a greater significance than the word 'company.'

"President Giffen continued that the Sun Maid brand is famous over the entire country but the name of the association of growers which makes the Sun Maid is lost sight of by the public. One of the main purposes of the change of name is to bring the raisin association's name into such close association with the name of the trade pack that each will be equally well known to the great buying public."

PEAR GROWERS' MEETING

Pear growers will hold a two day conference and program at the University of California on November 21 and 22. Improved methods in the handling of pears will be discussed by experts of the University of California and the pear growing industry. Dr. J. C. Whitten, chief of the division of pomology, will discuss pear growing in other countries. E. B. Babcock, professor of genetics, and E. L. Overholser, assistant professor of pomology, will give lectures on the opening day of the conference. The Pear Growers Association has arranged to bring Professor Reimer of Oregon agricultural college to the conference. Professor Reimer will present his recommendations for control of pear blight and his data on blight resistant stocks for pears.

VETERINARY QUERIES

(Continued from Page 533.)

water and remove all scale that has formed, then when the parts are dry rub in plenty of common engine oil such as you use in the crank case of your automobile. Do this every two or three days and the trouble will soon disappear.

Soft Butter

What remedy, if any, can you give for a cow which gives unusually soft butter? She is about seven years old and came fresh about six weeks ago. She is fed alfalfa and grain hay. Last year the butter was some better.—Subscriber.

Soft butter usually results from manner of handling milk and not from anything wrong with the cow. There is some difference in the quality of butter from different cows. In some the little particles of fat in the milk are larger than in others. The coarse particles make the softest butter and the best butter is made from a mixture of milk from several cows, but good butter can be made from the milk of one cow if properly handled. Of course the separator is out of the question with the milk from one cow. Strain milk two or three times to aerate it, cool partly and set in deep pan in cool, dry cellar. The milk and cream must be kept cool and when the cream is churned it should be at 62 degrees Fahrenheit. To give full details for butter making would take more space than is allowed in answering a question in this column, but briefly the essentials for making good butter are cleanliness and low temperature, and the milk must be kept away from vegetables and odors of all kinds, as milk will absorb odors very quickly. Probably your trouble is in not keeping the milk in a cool place and not having it at the proper temperature when churning the cream. Too much green feed has a tendency to make the butter soft, but as you are feeding alfalfa hay and other hay you should have no trouble with the butter.

WEATHER REPORT

Every Poultryman

FINDS THIS "PAY-STREAK" SOONER OR LATER

EVERY good hen is a mine—a golden mine of eggs. This mine will yield a certain revenue even if you go at it hit-or-miss. But, you can never expect to get the greatest yield—to strike the real "pay-streak"—until you tap the right vein. *And that's feed!*

No matter how carefully selected your stock may be—no matter how good the housing and care you give them—sooner or later you will "dig down" to this rock-bottom fact: feed is the nub and the rub of the situation.

Even the big poultry operators who have been mixing their own feeds and have switched to SURELAY will tell you it's the "cheapest" feed in the long run—cheapest because it nets *more* egg-money in return for the feed-money it costs.

These seasoned poultrymen realize—as you must—that a hen uses more energy in converting poor feed into money than she does in converting good feed into money. And, at that, how little is the difference in cost between good feed and poor feed! But look at the difference in the egg-sheet when you're through!

SURELAY has helped to put many a poultryman on his profit-feet by proving two things to him: First—that cheap feeds lessen the profits of every hen in his flock; second—that our large scale production enables us to turn out a better and more economical feed than he could hope to.

Blended and balanced according to a true-to-test formula, SURELAY stands top-high as a uniform egg mash that will make your hens pay by making them lay. The best way is the find-out-way. Order a sack of SURELAY from your dealer—and see! See how this high-grade mash "assays" in feed value. See how our daily laboratory tests insure the same feed value every time. See how SURELAY actually "pans out" with your flock. See how it rids your mind of feed-worry for all time. For "what's on the tag is in the bag"—always!

Also, send for the new edition of our booklet, "Makes Hens Happy." It is by far the most complete and helpful book we have ever issued on poultry feeding. And it's free! Simply clip the coupon—and mail today!

REO SPEEDWAGON

Fits Every Farming Need

It is literally true that, in city service—any kind of carrying "from a hearse to a hurry-up wagon"—this Reo Speed Wagon fits every business.

It is equally true that in all kinds of farm hauling, this pneumatic-tired Reo is supreme.

And when we say "farm" we use the term in its broadest sense.

For, there is no kind of carrying it will not do better and at less cost, than the cumbersome, slow-moving, solid-tired trucks—or the "flimsy-light" kind that may be rated at a "ton" but whose actual capacity is about half that.

No matter whether yours is a diversified, or a highly specialized dairy, grain, or produce, or stock farm; a commercial orchard, vineyard or truck garden; a grist mill or a green house—

This Speed Wagon will prove more economical, as well as more dependable for your work.

For every-day errands when the loads are light, but time precious; and for the heavy loads of harvest time—this Reo is equally adaptable.

Most amazing fact proven by 60,000 Speed Wagons now in service is that, whether the load be 500 or 2,500 pounds—a quarter-ton or a ton-and-a-quarter—still this Reo Speed Wagon shows greater economy as well as greater efficiency.

No need to buy a larger to do your heaviest work—nor a smaller for the lesser loads. This Reo will handle both better and cheaper.

The world today is geared to this Speed Wagon—it dominates the field regardless of carrying capacities.

Bodies Shown at Left are All Standard—Reo Made—and are Interchangeable on this Chassis

Spray Now for Peach Blight

By Fred K. Howard

EACH year it becomes more evident that the peach grower who produces quality fruit finishes the season with the largest bank account. In planning for a quality crop of peaches one of the most essential factors is the application of the right sort of spray material for the control of fungous diseases. Perhaps the most serious of these diseases in California is ordinary peach blight. This disease is one which it is impossible to control, and the wide awake grower will recognize this fact and use every precaution to prevent its occurrence on the trees of his orchard.

Continued practice of preventive measures for peach blight in California has demonstrated that to be effective sprays must be applied in the fall, if possible, before the middle of December. Consequently the grower should plan his spraying program in advance of this time and see to it that his spray rig is in proper shape to do a satisfactory job. Very often power outfits are left from one year to the next without giving them a thorough cleaning, only to find that when the next season rolls around many new parts are needed, due to the corrosive effect of spray chemicals on the metal parts of the outfit. Spraying of any sort, and particularly spraying for peach blight, requires very careful application under sufficient pressure to break up the liquid in a fine driving mist which will completely drench every limb and twig of the tree. Spray rigs without close fitting, well cared for working parts will not accomplish this result in a satisfactory manner. To apply spray to peach trees in any but the proper way will waste more or less of the material and may not be successful in accomplishing the desired results in preventing the disease. Consequently makeshift methods do not pay in the long run.

The accepted treatment for the prevention of peach blight is an application of Bordeaux mixture composed of five pounds bluestone, six pounds lime, to 50 gallons of water. This is commonly called a 5-6-50 formula. Commercial lime-sulphur solutions diluted 1-9 or 1-10 may be used with equal success, and experiments in the past few years have demonstrated that the so-called dry lime-sulphur solutions diluted as recommended by the manufacturers are satisfactory for the control of this disease. It matters little which of these mixtures are used provided care is taken to follow directions in mixing or diluting the materials.

In choosing a day for spraying the grower should select one when practically no wind is blowing and when storms in the immediate future are not likely, since a storm within 24 hours after the spray application will probably wash off enough of the material from the twigs that it would be wise to repeat the application.

A great many growers are not familiar with the appearance of peach blight and often consider that their trees are free from disease when in reality there are sufficient blight cankers to be serious infection points for the following year.

Consequently a grower snould become familiar with the appearance of this disease and plan for taking every precaution necessary to prevent its spread. The spores of the blight fungus do not grow sufficiently that they can be detected by the ordinary observer until after the first warm days of late winter and early spring. It is then that the typical cankers are most noticeable in the form of gumming slits in the bark of the twigs of the previous season's growth and around the fruit and leaf buds on these twigs. In badly diseased trees during warm, foggy or wet weather the gum becomes very abundant, in fact, it is during just such weather that the disease makes its greatest headway, often killing all of the buds on the tree, being most serious in the milder cases nearer the ground. When the disease has reached this stage the damage is done for that season, and some damage is done which will not show until the following season. Consequently the fall spraying program, in an effort to prevent its occurrence, will be the course of the wise and wide awake peach grower, and the men who know best regarding the value of spraying do not neglect to have everything in readiness for the job and do it at the right time in the proper way.

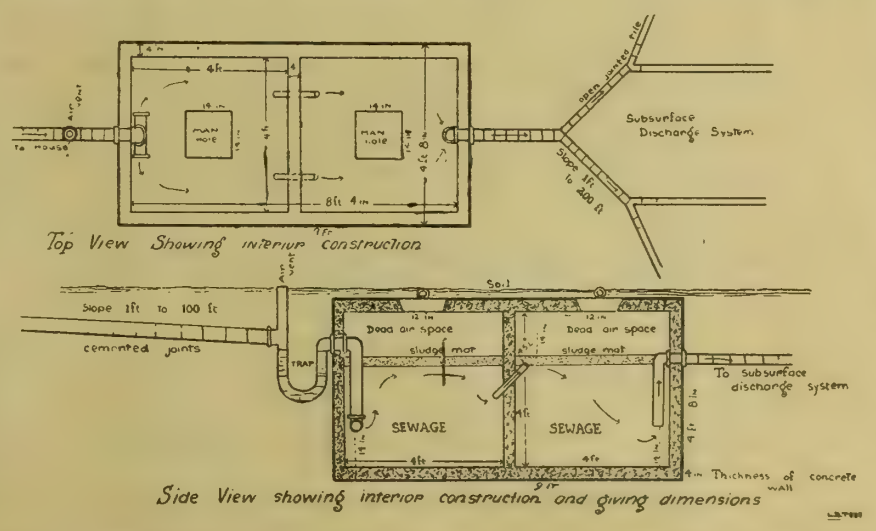
Concrete Septic Tanks

THE well managed farm of today means many household conveniences as well as labor saving farm machinery. Back breaking drudgery has been largely eliminated from both house and fields. Running water and the kitchen sink and bathroom have supplanted the old time pump and open, unsanitary drainage. But the most efficient disposal of sewage remained a problem until the concrete septic tank was invented. It is a simple, cheap and effective device, rapidly supplanting the drywell, with its constant menace of water pollution. In brief, there has come to the farmer his own little sewerage plant in concrete, which answers his purpose even better than large city works, for he has neither the tax nor repairs that always attach to a city sewer system.

The principle upon which the concrete septic tank operates is extremely interesting. It consists of a long, water tight cistern through which sewage passes very slowly and evenly. Located underground, it is warm and dark, thus affording perfect conditions for the development of the bacteria or germs which clarify and render harmless the sewage. After passing through the septic tank, the sewage is practically free from all suspended matter and has the appearance of water. From the septic tank this clear effluent is discharged into three lines of ordinary farm drain tile.

Size and Location of Tank

While the odor from the septic tank is scarcely noticeable, it is nevertheless best to locate it at some distance from the house. Choose a spot easy to excavate so that the top of the tank can be sunk six inches below ground level and where the lines of drain tile will have sufficient fall to carry off the discharge fluid. The tank should be large enough to hold the entire sewage for one day. For a family of eight to ten people occupying a house, two bathrooms fitted with the customary appliances in the way of tubs and stationary washstands, and downstairs the kitchen sink, a concrete tank having two compartments, each four feet long by four feet wide by four feet high, will be required. Since the top and bottom are each four inches thick and the top of the tank is six inches below ground level, dig the pit five feet two inches in depth. The walls of the tank are eight inches thick and the partition between the two compartments six inches. Therefore, the length of the pit should be nine feet ten inches and the width five feet four inches.



Making Forms and Placing Concrete

If the earthen walls of the pit stand firm only inside forms will be needed. These inside forms are merely boxes made of one-inch boards. Two boxes will be required to make two compartments. The outside dimensions of the boxes should be four feet square by four feet high. The boxes or forms will be placed on the freshly laid concrete floor.

The concrete should be mixed in the proportion of one part Portland cement, two parts sand and four parts crushed rock or gravel. Place a four-inch thickness of concrete in the bottom of the pit to form the floor of the tanks. On top of this concrete set the box forms, which should be ready for immediate use. Place the forms so that there is a space of six inches between them and an eight inch space between them and the earthen walls of the pit. Then commence depositing the concrete for the walls and partition. As soon as the level of the concrete reaches the hole in the forms place in the holes six inch pipes as illustrated. Then continue the concreting until even with the top of the forms.

Reinforced Top and Manholes

Two ordinary iron manhole frames and covers may be obtained from a local dealer in building supplies. The manhole covers should fit tightly and should not be perforated. The manhole frames should be ten inches high so that when placed on top of the forms the upper edge will be even with ground level. If the manhole frame is of less height than this, it should rest on a circular piece of one inch board which is nailed to the top of the form. Since the concrete roof is to be self-supporting, it will be necessary to reinforce it with a few lengths of three-eighths inch round steel rods. There will be needed four pieces of three-eighths inch rods nine feet six inches long, and eight pieces five feet long. The roof is now ready to be placed. Place the manhole frames in proper position on top of the forms and deposit the concrete to a depth of one inch and on the concrete lay the long and short bars. When the bars are placed, deposit the balance of the concrete so as to bring the roof to a total thickness of four inches. As it will be covered with earth it is not necessary to give this top surface a smooth finish, merely level the surface by striking off with a straight piece of board. The tank should now be allowed to rest undisturbed for at least two weeks. At the expiration of this time, saw away wooden top of the forms inside of the manhole frames. Then enter the tank and remove the wooden forms, passing the lumber out the manhole opening. While in the tank make certain that

(Continued on Page 559.)

Agricultural News Notes of the Pacific Coast

Northern California

Sycamore, Colusa County, has harvested its crop of walnuts.

Grapes have all been shipped from Lodi district of San Joaquin County.

A hatchery with capatity of 140 incubators is being erected at Sonoma.

The Northern California Orange and Olive Exposition will be held at Oroville, November 21-26.

San Joaquin County supervisors have let contract for construction of the Clements-Ione road in Goose Valley.

Farmers in the Woodbridge district of San Joaquin County are considering formation of a Wright irrigation district.

The state university reports swine production increasing. Forty-two per cent of California farms are raising hogs.

Movement of dressed turkeys from ranches to San Francisco markets has begun. Dealers are retailing at 50 cents a pound.

Mrs. C. E. Ellis of Glenn has been elected county chairman of the newly organized farm home department of the Glenn County farm bureau.

The Zante currant crop of the San Joaquin Valley is reported at about 100 tons. The currants are picked several weeks earlier than Thompsons.

A representative of the California Growers Association has been in Tehama County investigating feasibility of establishing peach cannery in that section.

The Rice Growers of California has postponed opening of its salesrooms announced for November 15, because market on paddy has been depressed by outside sales.

The Tehama County farm bureau is asking the board of supervisors to appoint a committee to suggest needed changes in county charter of laws affecting agricultural interests.

The new warehouse and exchange building of the Santa Rosa Poultry Association was formally opened last week. Construction was begun in June and the building cost $200,000.

Wholesale potato men of the northern part of the state met in San Francisco November 9 and discussed nematodes, or potato eel worms, in the effort to secure some means of securing greater freedom in shipping to other states.

Short courses in general agriculture will be given at the university farm at Davis, January 2-7. These are especially designed for prospective settlers and those wishing to acquaint themselves with the agricultural resources of California.

The first steps toward determining the actual cost of producing butter fat and market milk on the dairies of Sonoma and Marin Counties, in keeping with a state-wide investigation being conducted upon the request of the California legislature, were taken November 11 at a meeting of milk testers at Valley Ford.

The Glenn County Holstein-Friesian Association has been organized with 30 members. Its first officers are: R. J. Bender, Ord, president; W. C. Saxton, Ord, secretary and treasurer. The directors are J. L. Fulton, Ord; N. E. Mulick, Willows; J. Cook, Orland; B. J. Bills, Orland; W. C. Saxton, Ord; 2 R. J. Bender, Ord; W. Smith, Bayliss.

Central California

The city of Merced has purchased a 12 acre park site on Bear Creek.

Salinas Valley stockmen are bringing in feeder cattle from Mexico.

Packing of navel oranges is well under way at Sanger, Fresno County.

A radio station and emergency air base are to be installed at Visalia.

Almost a thousand persons visited General Grant Park during November.

There will be a farm bureau hog auction sale at McFarland, December 23.

Stockton is selecting site for a municipal camp in the mountains either of Amador or Calaveras Counties.

A poultry show will be held at Hanford, Kings County, December 16-18. This is the Kings County annual.

The McKiernan herd of cattle has been brought down from mountain meadows and placed in pasture at Success.

The raisin plant at Clovis, Fresno County, is now shipping about 25 cars weekly, 90 tons daily passing through the stemmers.

Farm center meetings in Kern County at Shafter, November 28; Arvin, December 2; directors, Bakersfield, December 3.

Stockton's claim for a deep water harbor will be settled at the next session of the rivers and harbors board of the U. S. army engineers.

The Fresno County farm bureau is asking the supervisors to pass an ordinance requiring school busses to stop before crossing railroad tracks.

The peak of the carlot celery shipment from the Delta section will go out about Thanksgiving. The acreage is 25 per cent less than last year.

Sequoia National Park, home of the giant trees, will be open during the winter months, the parks service announced, the route being by the Middle Fork Road from Three Rivers.

Fresno County is very proud of her official position, announced by the federal census bureau, of second richest county in the United States in value of crops and livestock products.

The Raisin Association finds that a package of raisins is being offered on the market, labeled "California Sun-Raised Seedless" in lettering and general appearance to correspond with "California Sun-Maid Seedless."

The name of the California Associated Raisin Company has been formally changed to "California Sun Maid Growers." The purpose of the change, as explained by President Giffen, is to capitalize the advertising value of "Sun Maid."

Horticultural Commissioner J. B. Hickman of Monterey County announces that anyone having greenhouse, garden or orchard infested with cottony cushion scale can be supplied with the scale parasite, Vedalia cardinalis, and thus be assured of a clean-up.

The special committee on the big Squaw Valley irrigation project met recently to settle details of boundaries and apportionment of cost of a preliminary survey. The $20,000 cost has been divided as follows: Fresno County, $11,000; Tulare County, $6,000; Kings County, $3,000.

Southern California

Brawley is to stage a poultry show December 20.

Escondido has added 22 lots to its Grape Day Park.

Orange County has 14 local farm bureau organizations.

The planting of grapes in the Imperial Valley will be greater than ever this year.

Imperial Valley has determined to make a planting of 100 acres of rice as a test plot.

State Market Director Harry Maddox is urging cooperative marketing in Imperial Valley.

Oxnard sugar factory has closed with 800,000 sacks of granulated sugar turned out in 983 days.

Citrus growers are continuing the agitation for organization of water transportation company.

At the November 14 meeting of the Elsinore farm center fall and winter gardening was discussed.

Members of the Imperial irrigation district are signing petitions for recall of board of directors.

Yucaipa Valley packing houses have closed on apples, the total crop being estimated at about 1100 cars.

A commercial beekeepers school for Southern California will be held at Exposition Park, Los Angeles, December 5-10.

Entries from San Diego, Riverside and Los Angeles Counties are being made in the big poultry show to be held at Santa Ana, December 13-17.

A poultrymen's banquet was held at Escondido on Wednesday of last week under auspices of the Poultry Producers Association of Southern California.

The San Dimas Lemon Association handled this season 869 cars. This includes the fruit of the Glendora and Covina districts as well as San Dimas.

Riverside County farm bureau has passed a resolution in which it is requested that the department of agriculture make a wider distribution of date offshoots.

A trainload of cattle, 370 head from Winslow, Arizona, was received one day last week in Escondido to be taken to the Laguna Mountain ranch of Joe Crouch.

Fifteen carloads of tomatoes were shipped out of Fullerton last week by the Orange County Produce Growers Association. Growers netted $1.40 per lug in Pool No. 7 last week.

A. I. Rittue of the department of agriculture permanently stationed in Los Angeles to investigate pests affecting sugar beets is urging a campaign on the nematode pest.

The Placentia Orange Growers Association closed its Fullerton house season the first week of the month. 850 carloads were shipped, an increase of 25 per cent over last year's output.

It is unlawful to sell in this state California holly berries taken from public lands or from private lands without written consent of owner. This law was passed by the last legislature.

At the annual meeting of the Escondido Citrus Union, November 11, J. F. Burns was elected president and Ben Schoneman, secretary. The association paid to growers during the year $99,000.

The Coast and General

Some sections of Montana are suffering because of drouth.

There is much interest in apricot growing in the mid-Columbia basin in Oregon.

Yakima Valley hay producers will save $85,000 as a result of freight reduction.

The walnut growing district about Dallas, Oregon, is shipping its biggest walnut crop.

The Washington State Holstein Association holds its annual purebred sale December 9.

Arizona reports Salt River Valley grapefruit as ripening early with unusually fine flavor.

The U. S. Grain Growers, Inc., is conducting a membership campaign in Minnesota and Iowa.

Grays Harbor County in Washington has discontinued the office of horticultural commissioner.

Wyoming's wheat crops are suffering because of warm dry weather which is proving very unfavorable for wheat and rye.

The Pacific Northwest Fruit Exposition held in Seattle, November 21-26, was participated in by Oregon, Washington and Idaho.

The irrigation district of the Okanogan Valley, Washington, is making extension of canals and improvement in delivery system.

Montana has organized a State Council of Agriculture. The council is to be composed of various farm and livestock organizations.

There is a general movement of sheep from the north to the foothills of southern Yavapai and northern Maricopa Counties, Arizona.

Citrus fruit shippers of the West Coast of Florida have chartered a boat to make a two months test of water shipping to northern markets.

Northern Arizona reports abundant rainfall. The season has been favorable for pasture and great numbers of fat sheep are going to market.

In the Yuma Valley of Arizona not more than one-fourth of the cotton has been picked; the crop opened late and pickers have not been numerous.

The Oregon State Horticultural Society meets at Forest Grove, December 1, 2 and 3. An extensive program for vegetable growers is included in the arrangements.

An apple grower of Douglas County, Oregon, says that section never had a finer harvest season. Seventy-five to 80 per cent of the apples were picked with no rain to hinder.

Pres. Gustafson of the U. S. Grain Growers will discuss cooperative grain marketing before the American Farm Bureau Federation now assembled in annual session at Atlanta, Georgia.

Grading and packing of the new crop of prunes is nearly done in packing plants of the Oregon Growers Cooperative Association and the highest expectations for large sized prunes are being surpassed. The crop is very light.

Two or three cars of citrus fruit are being shipped from the Salt River Valley or Arizona per day and already from 50 to 60 cars have gone out. The cool nights have been favorable for ripening and fruit is coloring slowly as is also the case in the Yuma section.

Gold From Thistles

By Lyman E. Stoddard

CALIFORNIA, famous for the unusual and bizarre in plant life, has outdone itself and outburbanked Burbank. They are raising edible thistles in the Golden State and making money at it.

Of course it's not the common, ordinary roadside thistle, but a great, big, beautiful variety known as the artichoke.

Is the artichoke really a thistle? Plant it where conditions are not to its liking and instead of a succulent vegetable you will have a prickly thing, with needle pointed petals containing no nourishment relished by human beings. The artichoke reaches perfection on the Pacific Coast and especially "down the peninsula," at Halfmoon Bay, a few miles south of San Francisco, where in the city's garden patch it reaches perfection. Here, within a 90 minute ride by automobile from the city, in the rich, black loam of San Mateo County, are reared annually 500 carloads of artichokes.

By properly educating this giant thistle the growers have trained it to produce from October to spring, culminating in its greatest production during April. The long, graceful, palm like leaves of the artichoke are cut back to the ground every June so the plant can throw out new shoots. The vegetable is not allowed to mature. Seldom does one see the big, handsome, sweet scented purple blossoms, beloved by bees; while the green buds are still soft and tightly closed they are picked for market.

Artichokes require plenty of water and rich sediment soil, being hearty feeders, besides lots of work on the part of the grower. But, then, it is a paying crop, the net income sometimes reaching $500 an acre. Returns approximated last year $3,000 a car, $1,500,000 for the growers. Most of them are Italian gardeners, paying from $20 to $50 an acre annual rent.

(On the point of the returns we note Mr. Stoddard states that they "approximated last year $3,000 per car, $1,500,000 to the growers." This shows a wonderful increase in returns since 1917, for Wickson's "California Fruits" published that year states: "The buds are packed in standard size apple boxes and are made to lie on their sides in the boxes. Such a box holds about six dozen large buds or about 15 dozen small ones, and about 500 boxes fill a car, for which the growers expect to get about $600. It is fair to expect an increasing demand, because the vegetable is only beginning to be understood and appreciated by Americans. When they learn its delicacy a continuous supply of fresh artichokes from California during the winter season can be profitably sold." Now, the question for the producer is "Will such prices prevail when reconstruction is completed?"—Ed.)

They have an association to look after their interests, but each grower packs and grades his own artichokes.

Young Artichokes Sprouting
Green spearheads tint the ground for miles between the hills overlooking the sea

Of the production of 500 cars, 150 are consumed in the San Francisco district and the rest shipped east. Those marketed locally are shipped in huge lug boxes. Apple boxes are used in eastern shipments. A regular train of motor trucks calls at the artichoke farms and takes each day's harvest over the hills to the railroad at San Mateo.

Matured Artichoke Plants Nearing Harvest Time

Unlike some other producers' organizations, the Halfmoon Bay Artichoke Growers Association does not fix a price for its product. The artichokes are sent to carefully chosen commission houses to be sold on consignment in the open competitive market. Only one commission firm in a town, however, gets artichokes, and the house treats the growers well because the trade is quite profitable and any unfair dealings are apt to result in turning the business to another merchant.

Artichokes sometimes sell for as high as 25 cents each wholesale. But that does not mean that rich folk are the only eaters of this vegetable—or flower. Push cart venders in the poorer neighborhoods of New York find a ready sale for artichokes at a quarter each. They are especially liked by folks who comes from southern Europe, for the artichoke once formed a part of the daily fare in the home land. Wiseacres among the Mediterranean peoples attribute to the artichoke iron for endurance, strength for hard tasks and high nutritive value which makes for longevity.

Doctors say artichokes are good for people who have indigestion brought on by too hasty eating. No one can gulp down an artichoke. It must be eaten leisurely. Picking off the petals of the boiled vegetable one by one, dipping them in mayonnaise dressing, olive oil or drawn butter and then taking a tiny bite from the inner side or end of each is not conducive to bolting one's food.

What is the future of the industry? Secretary J. L. Debenedetti of the growers' association says that expansion is limited. The producing area can be doubled.

MARIOUT MAKES FINE SHOWING

In Merced County this season Mariout barley has outyielded common barley in all tests so far reported. On the Bladt ranch at Newman the yields were Mariout 19, common 14 sacks. On the A. F. Bray ranch at Merced the yields were Mariout 21, common 8. On the Marshall ranch at Gustine, Mariout 6¾, common 5. On the Newman ranch at Le Grand, Mariout 15, common 11. On the Southward ranch at Le Grand, Mariout 16, common 11, and on the J. F. Snyder ranch at Gustine, Mariout 8 and common 4½ sacks per acre.

A record yield for Mariout barley is reported by J. Ahern of Dixon, Solano County. A 38 acre field fallowed for two years yielded 41 sacks per acre of 110 pounds each. Common barley on land fallowed one year yielded 25 sacks per acre, 94 pounds per sack.

Forty-five sacks per acre of Mariout barley was obtained by W. J. Hawkins of Vacaville, Solano County. The barley weighed 115 pounds per sack. Common barley yielded 20 sacks per acre and weighed 111 pounds per sack.

One hundred and sixty acres of Mariout barley produced by Leonard Hess of Tudor, Sutter County, ran from 30 to 50 sacks per acre this season and weighed 110 pounds per sack. Common barley yielded 20 sacks per acre and weighed 90 pounds per sack. A photograph of Hess' Mariout stubble after harvest shows the field to be thickly sprinkled with sacks.

One hundred and thirty-five acres of Mariout barley grown by A. B. Scheel of Richgrove, Tulare County, during the past season turned out 13.4 sacks per acre. Common barley yielded about eight sacks per acre. A field test by Carl Spuhler of Strathmore in 1921 showed Mariout barley to yield 35 sacks per acre as against 15 sacks per acre for common barley. The test was on dry land and Mariout weighed 120 pounds per sack, common barley 105 pounds per sack.

One of the highest yields of Mariout barley for the season is reported by W. D. Chiles of Davis, who obtained 40 sacks per acre from 40 acres. Common barley yielded 30 sacks per acre and spring planting was practiced.

In Natomas district 1,000 Mariout barley outyielded common barley 9½ sacks per acre this season. The grain was grown by F. C. Lane of West Sacramento, who reports Mariout at 29.2 sacks per acre and common barley at 19.7 sacks per acre. Mariout weighed 103 pounds per sack, common barley 101 pounds per sack. Lane estimates that over ten sacks of Mariout per acre was lost through lodging.

One of the largest plantings of Mariout barley this season was that made by J. E. Moran of Stockton which averages 35 sacks per acre over 4,000 acres. Common barley yielded 25 sacks per acre. Moran has already distributed 3,849 sacks among his neighbors for seed. It weighed 120 pounds per sack when recleaned.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

If among the more than 40,000 Cultivator's weekly circulation any fail to find any article they desire to purchase advertised in the Cultivator's columns, a special request is extended you to let your wants be known to the California Cultivator and we will place you in touch with proper parties.

EDITORIALETTES

California has a record for automobile accidents which is not enviable. The state's good roads, with the prosperity of her citizens, has resulted in a large percentage of automobiles. This, in part, accounts for the unfavorable showing. Besides weather conditions permit of driving every day in the year. But the number of accidents are all too great and perhaps it would be well to consider the staging of accident prevention week or some step which will induce people to drive more carefully. The deaths from motor vehicle accidents in this state during the past year were 21.1 per 100,000 population. In one of California's counties alone the death rate has averaged practically one for every day for a period of over two months. The death rate in this state is more startling when it is considered that the rate the United States over was 10.4 per 100,000 population, which was an increase from 5.8 which it was in 1915. Sometime we'll have fewer grade crossings and other death traps. Meantime let us drive more carefully—much more carefully.

Washington and Oregon have been visited by heavy rains with terrific snowstorms in the mountains. Railways have been using rotary plows but traffic is greatly impeded. All previous snowfall records have been shattered. California has been promised the tail end of the storm and producers would welcome a liberal precipitation from Shasta to Imperial. There has been slight precipitation in the Sacramento Valley but the weather bureau is not yet predicting a state storm.

* * *

Earl Graham has been a persistent winner of the Cultivator monthly prize in the state dairy cow competition. He has built up a great herd of purebreds and grades and every Cultivator winning has been made with grades. But even at that Mr. Graham has proven to his own satisfaction that purebreds pay best and this week he holds a sale and disposes of all the grades and will use the same good judgment and hard work in his increased herd of purebreds.

* * *

Purchasers of turkeys have certainly carried on a campaign of depressing the market for the Thanksgiving trade. Reports such as "Hundreds of tons of Australian turkeys stored since 1920 fill frozen meat rooms" have been published. "Still lower prices will prevail for Christmas trade" seems to be the slogan now that the Thanksgiving season is ended. Mr. Maddox and Mr. Britt of the state market commission are now talking cooperation on the turkey proposition and it is probable that this may aid in securing more just price.

* * *

The celery poisoning scare seems to be over and the department of agriculture has succeeded in getting Japanese gardeners to use greater care in spraying.

* * *

The agricultural club boys are off for the Chicago International. Here's to them if they come back with honors to California.

* * *

Deciduous fruit growers are bearing in mind that the rains are holding off longer than we wish, also that a deciduous tree needs moisture during the fall season if it would plump out and perfect the buds which have formed to give next year's crop.

* * *

Next week we will talk a lot about chickens. The poultry industry of the United States now has a valuation approaching the half billion mark. It is one of our greatest industries. In California it has increased during the last decade as in no other state.

NATIONAL FARM BUREAU

Howard is reelected president. The attendance at Atlanta is big. Membership now reaches a million and a half. Vital questions which affect farmers for coming 12 months discussed. Biggest of all: "Markets and Marketing."

POTATO DAY

The annual fall session of potato growers will be held in the San Fernando Valley Tuesday, November 29, at 10:30 a. m. The Los Angeles County farm bureau says: "This will be the most important meeting of potato growers ever held south of Tehachapi." There will be election of officers, discussion of work for 1922 and a full program of cultural and marketing questions. Lunch will be served 12 to 1:30.

The potato is coming to its own and the coming year will be the greatest yet in California.

SOME BLOC

For once since history began the farmer has the edge on the legislators. This has been true at Washington because of the combination of agricultural organizations with certain representatives and senators. It has been true in California because of a movement initiated in the state fruit growers convention resulting in the appointment of a legislation committee. These efforts have now resulted in such an effective bloc that word is passed that there must be "exposure." A dispatch from Washington dated November 3 and given publicity in many daily papers suggests that "A general exposure of the organized influences which are back of the senate agricultural bloc is likely to be the result of a growing opposition to the group of senators who hold the balance of power and dominate legislation.

"Last summer Congressman McFadden held hearings and showed the activities of this organization which dominated the so-called agricultural bloc. According to the evidence submitted and which has been corroborated by the progress of legislation this move is sponsored and dictated by an organization which is sapping the life of the old farmers' grange movement and has taken over several thousand radicals of the Nonpartisan movement in North Dakota and to a lesser degree in other states."

Too bad about "sapping" the life of the Grange and other organizations. Likewise too bad to be "exposed," but it is barely possible the exposure may result in somebody "ketching it." The exposure calls attention to "high salaried organizers of the movement" also to the fact that "the membership of this movement now aggregates a million and a quarter and this organization is known as the American Farm Bureau Federation." Also, "The dues of the farmers are generally $10 per year, a part of which goes to the maintenance of large headquarters here (in Washington)." "Its president gets $15,000 per year; others receive $12,000, etc." Revelation of such blood curdling secrets should bring quite a thrill to the farmers the country over. Really, it is a dangerous bloc, and more exposure may aid in getting more farmers into line to demand their rights.

NO STRIKE

In our issue of November 5 we said editorially:

"The strike is declared off before it started, which is fortunate for all and especially for those who would have caused the producers of the country untold losses. For once the would-be strikers had absolutely no support from the people. They were so everlastingly wrong in their contention that not a single force outside their own membership—and as it has finally proved only a small portion of that—stood squarely for the great economic loss."

To which a subscriber at Las Vegas, Nevada, replies:

"Being a locomotive engineer and a subscriber and reader of the Cultivator, I take the liberty of enclosing herewith some facts and figures clipped from the B. of L. F. & E. Magazine, and a clipping from the Cultivator of November 5, which I believe (as you say) is so 'everlastingly' unfair and unjust that you either don't know the truth of the situation or are just like most of the daily papers that you give the public one side of the story, especially where labor organizations are concerned.

"In speaking of the great economic loss, I would like to ask who has been responsible for the great loss the farmers and shippers have sustained the past year? Statistics show, and it is a proven fact, that the railroads would have made more money and there would have been practically no unemployment in the country had the 33 1/3 per cent increase in freight rates not been made for the simple reason that the roads would have done at least 50 per cent more business."

The quotations from "Brotherhood of Locomotive Firemen and Enginemen's Magazine" are not given because of lack of space, though they make up a very strong statement for railway employes. The concern of the Cultivator in this matter of transportation is entirely from the standpoint of the producer and with a real desire to be fair to employe and executive in transportation matters and with the consumer in mind.

First, as to the being "everlastingly unfair and unjust." Also as to "you don't know the truth." We must confess we do not know all the truth. There is a great deal of truth in this world and it shall make us free if we will but seek it. The laborer who puts his hand to the throttle and carries us and our product safely to the markets of the world is worthy of our trust and worthy a living wage. Our editorial above quoted in no way denies that. As to "one side of the story only" it is a long, long question and cannot all be discussed from all sides in the limits of this page. But the trainmen of the United States insisted upon wages which meant the ruin of practically every farmer of the land. This in order to secure for one favored class wages which because of the present day purchasing power of the dollar have never before been equaled. They were "everlastingly wrong."

The return for farm products is today lower than it was just preceding the war. The farmer rises long before day and works anywhere from 12 to 16 hours, and for the service of supplying food to railway workers and others he receives a starvation wage. He is told he can receive no more because of the great cost of putting these products into the hands of the consumer, and the entire country is compelled to witness the tragedy of ruined homes which are just as worthy and filled with as patriotic people as the homes of the men who pilot our trains.

Could it be said for a moment that such a condition is "everlastingly" right? All the logic of the most faithful and capable of trainmen cannot make the farmer believe it.

Now as to the other portion of our subscriber's inquiry: "Who has been responsible for the great loss to the farmer?" Here is where we come more nearly to an agreement. The Cultivator has no apology whatever for railway executives who persist in maintaining rates which are ruinous to so many. Those executives are laboring under the age old idea that capital is sacred and must not be impaired. They have stockholders whose interests must be protected. The producing class is forced to take the brunt of the loss in order to save the stockholders and the long salaries of the executives.

The time was when the railway laboring class was forced to take more than their portion, but the wildest imagination is not able to conceive where there has been any injustice in present day compensation.

Here is one point wherein the railway executives are as wrong as we charged the strikers would be, and that is in not passing on to producers and shippers the benefit which is accrued to them because of the July 1 cut in wages. We all recall the promptness with which that 33 1-3 per cent raise in rates was met by the railway management. Has anyone heard of a 33 1-3 per cent or any other percentage of cut which would apply to all products? At the present rate of reduction there are many long years before us before the slight reductions in singled out products will become sufficient to amount to a real reduction in freight rates. Worse, the railway people have endeavored to force the greatest injustice by offering slight reductions conditional on the shippers refraining from use of water transportation. This was in a case where water transportation could be secured at rates which would allow the producer to live.

Altogether the producer is between the devil and the deep blue sea. He may have no information as to which is the deep blue sea and which is the other fellow but he is demanding a nearer approach to justice. He doesn't know how, but in some way he is going to get it.

ARGENTINE ANT IN CITRUS ORCHARDS

The department of agriculture at Washington is just issuing "Control of the Argentine Ant in California Citrus Orchards," written by Prof. R. S. Woglum and A. D. Borden. It is U. S. D. A. Bulletin No. 965. The book gives a bit of the history of the introduction of the Argentine ant into the United States and then discusses the relation of the ant to the citrus industry, characteristics, habits and control. The control is through banding, trapnesting, poison syrups, clean culture. The summary gathers together the lessons of the bulletin as follows:

An investigation of methods for control and eradication of the Argentine ant was started in 1915 and continued until 1920. The methods used included banding of trunks to prevent the access of the ant, trapnesting, repellents, and the use of poisoned syrup.

Of the various substances tried in banding a mixture composed of one part sulphur and six parts commercial sticky tree banding material proved most satisfactory. The careful attention necessary to keep the bands in a freshened condition, their high cost, and the outstanding fact that the ants remained an everlasting menace, however, led to their discontinuance.

Trapnesting proved to be impractical under Southern California conditions because of the light average rainfall and the excessive cost as compared with that of the use of a poisoned syrup.

Repellents in the form of corrosive sublimate bands and powders prepared from pyrethrum and sodium fluorid, were found to have a limited use about residences, apiaries, etc.

The most practical means of control was the complete eradication obtained by the use of an arsenical poisoned syrup. Numerous formulas were prepared and tried in large field experiments. Of these the original Barber formula proved effective but was objectionable because of rapid crystallization. Various modified formulas were used and one finally adopted which contained all the ingredients of the Barber formula, somewhat reapportioned, and, in addition, the preservative benzoate of soda. The modified formula gives a much thinner syrup of great stability, and also considerably cheaper. The arsenical poisoned syrups have been used in various parts of Southern California on almost 3000 acres of citrus with excellent results. Ants have been totally eradicated from many hundreds of acres with one or two applications. It is essential that the syrup be carefully and properly prepared.

Orchard control. In orchard distribution approximately 1½ ounces of syrup is placed in a four-ounce spice tin with a few strands of excelsior, and such a tin is hung on the trunk or a main branch of each infested tree. Spring and autumn are the preferred periods for this work. Monthly inspection should be made and empty and removed containers refilled and replaced. The average cost per tree has been between 4 and 5 cents.

Control about residences. This method has proved equally successful in eradicating the ants about residences. Much care should be given to bait each trail, at intervals of 10 to 15 feet, with either a spice tin or a ground trap.

The eradication of the Argentine ant has resulted in commercial control of mealybugs and the soft brown scale over a large area in the citrus districts of Southern California.

This bulletin may be had by sending 10 cents to Superintendent of Documents, Government Printing Office, Washington, D. C.

SHORT COURSE IN DECIDUOUS FRUITS

The division of pomology of the state university is making every effort to have a large attendance at the two weeks' short course at Davis beginning on November 28. The course is designed to meet the needs of the busy orchardist who can leave his work for only a few days at a time. Only the most essential operations of fruit production will be discussed, although the members of the pomology staff and representatives of several of the leading fruit organizations will be on hand to answer any inquiries relative to production and handling of fruit.

As special features two consecutive days will be devoted to the consideration of fruit drying with special reference to artificial evaporation; three to control measures or diseases and orchard pests with special reference to the best spraying practices. Three standard power sprayer outfits of the latest type will be available for comparison and demonstration purposes. One week will be devoted to pruning. During this time the latest methods in pruning to secure earlier and heavier bearing and for the rejuvenation of old trees will be fully explained and illustrated.

In addition to the work in the station orchards several demonstrations will be held in commercial orchards. Arrangements have been made to spend a day each in the Winters, Vacaville and Sacramento River districts. This will allow ample opportunity to demonstrate the pruning of all of the leading deciduous fruits. In order to take advantage of these trips every one in attendance who can is urged to bring their automobiles.

It is felt that the two weeks' program will be well worth while to the fruit grower who desires to keep in close touch with the advances in horticultural practice. The complete program for the two weeks is as follows:

Monday, November 28—Pruning deciduous fruits.

Tuesday—Pruning young trees up to bearing age.

Wednesday — Principles underlying pruning young trees. Pruning young bearing trees.

Thursday—Demonstration in old orchards near Winters. Pruning old almond, apricot and peach trees. Lecture, Dr. J. C. Whitten.

Friday—Demonstrations in old orchards near Vacaville. Pruning old cherry, plum and other trees.

Saturday—Demonstrations in old and young Sacramento River orchards. Pruning pears.

Monday, December 5—Horticultural literature. Pollination of deciduous fruits. Spraying machinery and equipment.

Tuesday—Spray materials. Preparation of lime-sulphur, sulphur glue and Bordeaux mixture. Discussion and demonstration of poisons, oil sprays and other contact insecticides. Safe and unsafe mixtures of sprays. Spraying in the orchard. Grafting and budding.

Wednesday—Insect control in deciduous orchards. Discussion and demonstration of methods of controlling red spider, codling moth, aphis, peach worm, thrips, borers and scale insects. Disease control in deciduous orchards. Discussion and demonstration of methods of controlling pear blight, peach blight, walnut blight, peach leaf curl shot-hole fungus, apple and pear scab, apple mildew, brown rot, oak fungus, crown gall, heart rot and gummosis of cherry and apricot.

Thursday—Grading and packing fresh fruits. Varieties of deciduous fruits for California. Discussion of various drying, canning and shipping varieties with reference to their soil, climatic and commercial adaptation. Irrigation of deciduous orchards.

Friday—Drying and curing of fruits. Discussion and demonstration of equipment, processing, storage and costs of sun-drying deciduous fruits. How may we best improve the dried fruit products of California?

Saturday (program in charge of Fruit Products Laboratory)—Relation of dehydration and sun-drying to California horticulture. Efficient construction and operation of a dehydrator. Relative merits of sun-dried and dehydrated fruits. Control of dried fruit insects.

SEED MARKETING HINTS FOR THE FARMER

"Seed Marketing Hints for the Farmer" is the title of Farmers' Bulletin 1232. Primarily it has to do with seed corn production. However, seed from the sorghums, clovers and grasses are also touched upon, with methods of growing, thrashing, cleaning, sacking, sampling, testing, tagging, storing and marketing. This bulletin may be secured through the U. S. department of agriculture, Washington, D. C.

Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Asparagus Sprengeri

I have a fern in a box of soil that seems to be mostly roots and bulbs and very little fern. Perhaps a larger box is needed. Should it be transplanted and when? How often and how much should it be watered and fertilized? I enclose piece of fern and would like to know the name.—Old Subscriber, Hemet.

The plant is not a fern. Its proper name is Asparagus Sprengeri. It belongs to the lily family and therefore soil is full of bulbs. It should have a larger box, pot or tub and may be transplanted at any time. It is a gross feeder and needs much food and drink at all times, but is a very hardy plant and no amount of harsh treatment or neglect will kill it. When well cared for it is a beautiful plant of luxuriant growth.

Transplanting Lemon

I wish to know what is the best season and method of transplanting a lemon tree. It is five years old and now full of fruit.—Subscriber, Turlock.

This tree may probably be transplanted safely after danger of spring frosts has passed, say during later March or earlier April. Remove the crop and cut back top severely. Some even go so far as to almost defoliate. If possible take up a large portion of the root system and if soil is of a nature to cling in a ball around taproot it adds to the probability of safe removal. When dirt is taken away from roots and taproot is cut a two by four scantling, say 12 or 14 feet long, or other strong timber may be lashed to the trunk at the surface of the ground and a couple of good men at either end of the scantling may lift the tree to its new location which has been prepared. Sift in rich soil about roots and turn on the hose immediately. Another good wetting may be given in two weeks and still others at frequent intervals for the first few months.

Washing Sheep Skin

What is the best method of washing sheep skin in order to get the wool clean and white?—Subscriber, Merced.

We will pass this question on to our sheep owner subscribers. Ordinarily cleansing of wool may be fairly satisfactorily done with pure soft water. The "yolk" naturally in the wool is usually sufficient to make washing with the pure water very effective in cleaning and even whitening the wool. If this is not sufficient a good grade of white soap will aid in the process. However, will our subscribers send us hints?

Dairy Tenant

I have a dairy proposition offered to me on a share basis, 50-50, and I would like to know how an agreement of that kind is drawn, that is, who is supposed to supply the feed, water for irrigation (pumped), repairs to machinery, etc. I am placing 30 head of my own cows with those of the owner. The cost of water, including labor, will amount to about $1600 per year. At the present time place is badly run down. Any information you can give me will be greatly appreciated.—Subscriber, Madera.

This matter of tenancy and the division of costs and of return from the products is a perplexing one and one which can not possibly be treated from a general standpoint with any degree of justice. Every proposition has to stand on its own merits. From the statement given by the inquirer it appeals to us that on a 50-50 basis with the place badly run down and with the tenant furnishing a large number of the dairy animals the water should be furnished by the land owner. The usual custom is for the owner to furnish all equipment and the tenant all labor. This would call for the distribution of irrigation water by the tenant. But, as noted, such conditions as distance to market, condition of the highways and numberless other things must be considered.

Substitute for Manure

I have no stable manure for my vegetable garden and can get none. What commercial fertilizer shall I use, and how much of it to the 500 square feet? The soil is gravelly sand.—Subscriber, Ontario.

There is no satisfactory substitute for good rich stable manure and for small garden we would endeavor to secure goat manure, poultry manure, or some organic fertilizer and supplement it by the use of a complete commercial fertilizer. If the manure can not be secured we would prefer a commercial fertilizer which secures most of its elements from organic sources. Meantime we would suggest to our gardener inquirer that he rake up leaves, weeds and also take the garbage from the table and gather up straw or any similar vegetable material, compost with a small quantity of dirt and lime, keep it wet, shovel over occasionally, and in this way manufacture on the place a surface dressing which will prove valuable. However, this takes time. A high grade complete commercial fertilizer may be applied at the rate of say 500 to 1000 pounds to the acre or say 25 to 50 pounds on the 500 square feet.

Strawberry Tree

Some time ago I wrote asking about a strawberry tree or tree strawberry about which you printed an article some time last spring. The party you referred my letter to did not reply. Can you inform me where I can obtain a tree?—Subscriber, Coachella.

The strawberry tree, Arbutus unedo, does not bear an edible or usable fruit, though what little flesh covers the seeds is very tasty. The tree is generally for sale by all nurserymen dealing in ornamentals. However, we mail you address of a firm which handles this plant.

Wild Oats

From what locality did we get wild oats? Please give a short history.—Subscriber, Stevenson.

The history will indeed be short. The seeds of this plant, Avena fatua, came to us in grain seeds from its native home in South Europe and is now common throughout California.

Peanuts

When should peanuts be dug or pulled? Some of the vines are wilting and others are still green. Does it make any difference if the frost hits them? Do they have to be dried before they are roasted?—Subscriber, Escalon.

Usually frosts catch the vines while still green and the crop should then be dug at once. They are usually dug by a machine but may be dug by hand. Unless soil is very sandy you will lose some pods by pulling. When vines commence to wilt, as yours have done, it is time to harvest. The vines are stacked and dried before threshing but no drying is practiced before roasting.

Best Berry Plants

Which is best strawberry for light soil in this section? Does Cory Thornless blackberry give as good returns as the Mammoth?—Subscriber, Santa Paula.

For the past two or three years no strawberry has given such good results in the south end of the state as the Carolina. There are several other good varieties, but this seems to lead at present. One grower says Gibson is second best; another says Banner, while one grower has only Klondike and Brandywine, all on light soil, though neither very sandy or gravelly. Growers who handle both blackberries you mention claim the Cory is a little superior to the Mammoth, but the latter is, nevertheless, a good berry.

Asparagus

How should ground be prepared for planting asparagus roots which are two years old? Also, when should they be planted? How soon will they bear?—Subscriber, St. Helena.

Soil for asparagus needs no special treatment beyond deep plowing and pulverizing. If it needs too much of the latter it is not good asparagus soil, for a sandy soil is best. Two year old roots are best. The possible planting season is quite long, but January is a good time, or early in February. You will get quite a crop of tips later in the spring but much heavier a year later.

Hedges and Rhubarb

I want to plant a hedge around my yard, as I like the privacy of the old fashioned garden, but as our place is very small (just a town lot), would like something we could use as well, so wondered if hazel nuts would form a hedge if kept pruned properly, or can you suggest any other fruit or nut that you think would serve that purpose? If hazel nuts would do would be very glad to know if there is a special variety to ask for or just the common nut one buys in the grocery store. I am very anxious to raise rhubarb, but in this place I hear on all sides that it is impossible, as the ants eat it up. I think I remember reading in the Cultivator something about that some time ago, so if you will kindly tell me what to do I will be glad.—Subscriber, Madera.

Hazel nuts are not worth planting in your section of California. Why not use berry bushes of some kind? Grapes will also qualify as well as hazel bushes, for both are deciduous. In evergreens a new raspberry will give you a green hedge at all times as well as a good home fruit crop. Strawberry quavas will also make a good one. The climate of Madera County will hardly allow a large hedge of limes, which are even more tender than oranges and lemons. As for rhubarb and the ants, we would get rid of the ants by using the government poison formula printed in the September 24 pest number of the Cultivator. This is not difficult or costly. Then, if your soil is not very heavy and you enrich it, you may grow good rhubarb.

Veterans Loan

Many inquiries are coming to the Cultivator as to how a veteran of the world war or the Spanish-American war should proceed in order to secure loan. The first step to take is to write the Veterans Welfare Commission, Sacramento, and ask for application blanks and full information. We may say, however, that the blanks are not yet ready but the applications may be filed and will secure attention as soon as possible. The funds available under the enactment of the recent legislature are only $3,000,000. The same act, however, called for an election in November, 1922, at which the voters of California will be asked to decide as to the issuance of an additional $7,000,000. Until that action is taken by the voters the amount which may be advanced by the commission is limited.

Pickling Ripe Olives

We have an olive tree in the yard which, though a young tree, has several pounds of fruit on it. The olives are a dark purple and the inside of the fruit is also of a purplish cast. Are these an edible variety, and if so, how are they prepared for use?—Subscriber, Ripon.

These are no doubt excellent olives and ready for pickling.

Mrs. Sherman of Fresno gave to the Cultivator years ago directions for pickling olives that can hardly be bettered. This is for pickling a quantity for home use, and it is suggested that thoroughly cleansed oaken barrels may be used. Mrs. Sherman recommended that barrels be cut in half, filled with lime and water until needed. Then into 12½ gallons of water put 1½ pounds of lye and 2 pounds salt, filling barrels three-fourths full. Put freshly pickled ripe and sound olives into this solution. After 12 hours test olives by cutting through. If yellow stain from lye reaches almost to pit, run off lye and put on fresh water, adding 1½ pounds salt. The water should cover the olives three or four inches. Stir with wooden stick every two or three hours. Change brine every other day. After two days taste, and if bitterness is all out, repeat lye. The use of the salt keeps the olives from getting soft and in a measure sets the color. Let light into the olives when in the brine, but avoid direct sun rays. This also helps to blacken the olives. If olives pucker in the brine, simply run off brine and cover with fresh water for a couple of hours until plumped out again, then put on weaker brine. The olives will keep a reasonable length of time in open vessels if brine is watched and boiled often enough to keep down bacteria. It is better to can them in glass or tin while perfect. The state board of health now requires that all olives offered for sale must be processed for 40 minutes at 240 degrees Fahrenheit to assure no possible growth of botulinus germs. This necessitates use of pressure cooker. Boiling in cans for one hour has been the custom for home use.

"Sweetening" Olives

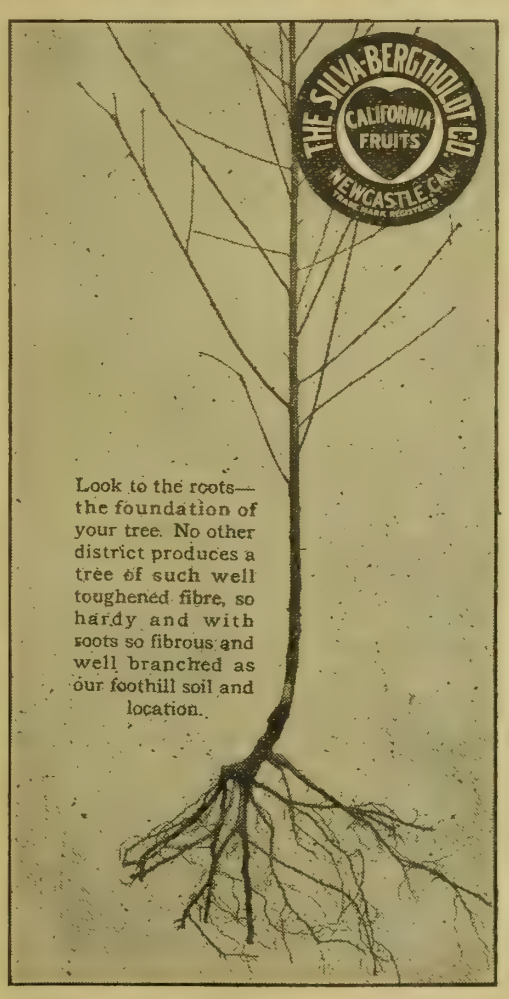
I would very much appreciate if you would send me a recipe for sweetning green and ripe olives, and how to season them.—Inquirer, Mountain View.

Does our inquirer mean the ordinary curing or pickling of green and ripe olives? If so, we call her attention to directions elsewhere in this department for curing ripe olives and give here method of pickling green olives. If this is not what is desired, let us know and we will try again.

Pickling Green Olives.—Pick olives when full size but hard green. Prepare lye of 30 ounces soda lye per gallon of water, 1 pound per 5 gallons. Place green olives in this and leave until the lye reaches pits, as indicated by cutting sample olive to pit. This will take about 24 hours. Pour off and discard lye. Cover olives with water. Change twice daily until lye is all removed; about one week. Prepare brine in 9 ounces salt per gallon water (a little more than ½ pound per gallon. Fill completely with brine and drive bung into keg or barrel and seal the jar. Leave in quiet place till flavor develops. This will be in about two months.

Sixteen carloads of feeder cattle came last Saturday from Holbrook, Arizona, to Blythe stockmen.

Plant an Orchard



Look to the roots—the foundation of your tree. No other district produces a tree of such well toughened fibre, so hardy and with roots so fibrous and well branched as our foothill soil and location.

Write us for complete copies of the announcements of the "Bergtholdt Plan." This plan is a vital issue to every fruit grower—to all California. It means your success and ours in fruit growing. The responsibility for this plan is upon every individual fruit grower — boost for it.

Growing fruit is the best paying business in California.

The acid test of any business is not what it will do under favorable conditions, but what it will do under adverse conditions.

Even under this year's depreciated values, the orchardist with a block of **Prunes, Bartlett Pears, Apricots, Cherries, Raisins, Shipping Grapes, Clingstone Peaches, Drying Peaches, Fall Pears, Almonds, Shipping Peaches, Shipping Plums, Canning Plums,** and **Figs** will make more money than the grower of grain, hay, alfalfa, beans, rice or the dairyman.

Every acre of land adapted to fruit growing that you now employ in growing grain, hay and other crops, is too valuable for fruit to be employed as you are now doing.

Every year that you grow these other crops instead of planting your acreage to orchard, represents not only a dead loss in money, but more than that, one year's loss of life's opportunities.

The trees you plant now will, five or six years hence, assure your share in the profits inherent to the California fruit grower.

We offer for your planting the most complete assortment of commercial fruit varieties.

Our trees are the best that care in propagation and efficient workmanship can produce.

Our catalogue, full of accurate practical horticultural information and suggestions, and our thirty years' experience in fruit growing, and fruit marketing, are at your service for the asking.

Submit us a list of your tree wants for quotation while the varieties you desire are still available in our foothill grown stock.

Write me today.

WHY TRADE IS SLOW

Unprejudiced observers declare that retail merchants have been slow to take their losses in the financial depression and slow trade has resulted. Farmers were hit hard but kept their courage. They have been compelled to buy carefully, but are good judges of value and as soon as general commodity prices reach a level that compares favorably with the prices of farm products they will buy with their usual liberality.

The recent cuts in prices made by implement manufacturers as soon as replacement costs could be estimated are excellent business stimulants the effects of which will reach far beyond the merchant. They will affect the manufacturer and all his helpers as well as the material men from whom he gets his supplies. Activity in one line always extends its good influence to other lines and so everybody will be in step and general business prosperity will prevail. As the Ohio Farmer says, prosperity is almost altogether a matter of everybody agreeing to go ahead with business.

Vegetables Should Be Washed

CURRENT press reports reviewing convictions of Japanese vegetable growers supported by a few isolated and very infrequent cases of human poisoning through the use of arsenicals applied to celery, lettuce and cabbage, have now reached a point where the California department of agriculture deems it timely and expedient to advise the California housewife as to the exact conditions upon which such news has gained headway.

For many years it has been the custom of growers of cabbage, celery and lettuce to spray the growing crop at stated intervals to prevent widespread damage by insects and worms that would, if unmolested, render the produce unfit for human consumption and perhaps a total loss to the grower.

Due to its ready availability, cheapness and quick action on insect life certain forms of arsenic applied in solution as a spray have been used with good results. Unfortunately the untutored Oriental in some cases appears to have been working on the theory that by increasing the dosage of arsenic he would correspondingly increase the benefits in cases of gross infestation or else through sheer ignorance or indifference has been applying excessive quantities of spray material.

Through such procedure celery, lettuce or cabbage might be offered for sale with discernible quantities of arsenic or lime appearing as a dry residue on the leafage and stalks of the produce and in no case should such produce be utilized as human food until carefully cleansed to free it from all traces not only of any spray material, but also trash, grit, sand, dirt, worms or bugs.

Several years ago in the East a dealer was hailed into court for selling filthy bacon. He contended that the dirt was superficial and could be eliminated by washing the meat before cooking. However, the court ruled adversely, taking the stand that no one washed bacon!

In the case of vegetables and salads such as celery, cabbage, lettuce and others, subject to contamination from many sources, cleanliness should for many reasons be the first thought. Through careful washing and rinsing in water nearly all dirt and objectionable matter can be eliminated. In the case of celery, the stalks of which grow with deep corrugations that might offer access to spray material and from their nature resist the cleansing action of superficial washing, one might adopt the expedient of "skinning" the outside as an added precaution.

In any event take the precaution carefully to wash all vegetables prepared for the table, especially those like celery and lettuce that are not ordinarily cooked before serving.

Federal Farm Loan

THE federal farm loan system has been somewhat under fire although the most serious accusation has been that it is altogether too slow. Congress has taken cognizance of the criticism and has made appeal to the loan board for swifter action. This has called out a letter from Farm Loan Commissioner Lobdell. At least Commissioner Lobdell has written to Senator Kenyon an explanation of the work and the workings of the farm loan bank. From Mr. Lobdell's letter we make extracts:

"If we interpreted correctly the purpose of your visit, it was to suggest to us the possibility of placing a greater volume of loans through the farm loan system and to inquire if such a result were not possible.

"Allow us first to briefly summarize what the system is doing:

"As you are aware, loaning activities were entirely suspended for more than a year, because of litigation which cast a cloud upon the validity of farm loan bonds, and rendered their marketing impossible.

"Following the favorable decision on February 28 of the present year, it was necessary to have new bonds engraved at the bureau of printing and engraving, submitted to the several land banks, and returned to this office before sales could be made. Owing to necessary change in the engraved plates, there was unusual delay in the bureau, and it was May 1 before any of the bonds could be delivered. Within six months from that date we shall have sold and delivered to the public practically $100,000,000 of farm loan bonds. This is the accomplishment of the system on the side of procuring loanable funds.

"On the other side, that is the making of loans. The federal land banks, as soon as the successful result of the spring offering was apparent, renewed the taking of applications, beginning the 1st of July the active closing of loans. In July there were closed a total of $9,204,900, in August $12,506,000, and in September $12,407,400. It will therefore be seen that the system is functioning steadily and distributing directly to the farmers, at the lowest prevailing rate, funds at the rate of $150,000,000 per year, and that it is fortified by the sale of bonds, so that such production can safely be undertaken for the next several months without additional sales.

"The question then arises: Is this a reasonable accomplishment, and is it reasonably possible to proceed more rapidly to meet the widespread and insistent demand?

"In reply, our candid judgment is that the present rate of progress, if steadily maintained, approaches the maximum that can be accomplished without the sacrifice of safety for haste and of continued and permanent upbuilding to immediate expediency. Neither of these sacrifices can of course be for a moment contemplated.

"Two general factors enter into the reasons for this conclusion. The first is physical capacity. The largest continuous 12 months' transactions by the federal land banks were $146,110,000. At that time funds were available, applications were in hand, and the banks had been organized nearly three years, and seemed to be working at nearly full capacity, but close observation of their activities at the time convinced the board that they could safely increase their capacity to $150,000,000 a year, and that by some readjustment of the system it mignt be possible to reach an aggregate of $200,000,000 a year with safety.

"While it is possible that a given bank may in a single month close $2,000,000 or even $3,000,000 of loans, where the applications have been long accumulated, appraisals made, and titles examined in advance, but we believe the experience of all mortgage concerns will bear out the statement that a single organization which month in and month out throughout the year closes loans of the average size of $3000 to the extent of $1,000,000 to $1,200,000 a month, at the same time making its collections, looking after taxes, insurance, and all the business incidental to its organization, is doing about as much as such an organization could safely undertake.

"The other question entering in is the supply of funds. From time to time the suggestion has been made, in various forms, of government assistance.

"Any governmental assistance, beyond that now possible under the Curtis-Nelson bill, which contemplated the temporary purchase by the government of farm loan bonds, would merely place the system under obligations which would in the near future entirely stop its general operations. Already the federal government holds $183,035,000 of farm loan bonds, which were purchased as a temporary expedient, with the provision that they should be taken up within one year after the ending of the war, upon 30 days' notice from the secretary of the treasury.

"This means that after March of next year the secretary of the treasury may at any time call for the redemption of these bonds.

"Farm loan bonds must not, if the system is to continue, be placed upon the market in such volume as to clog the market and depress the price, for on its narrow margin of operation the federal farm loan system can not function unless it can sell its bonds at par.

"The bonds are offered by public announcement of the secretary of the treasury, are for sale by the federal land banks, and the 4,000-odd farm loan associations, in addition to which they are offered by a country-wide group of more than 400 bond distributing houses under the management of six of the best established and most reputable bond houses in the country. We feel that we have behind them a selling organization which in its potentialities has never been excelled. Nearly two months were necessary to dispose of the $40,000,000 offering made May 1. The sale of the present offering of $60,000,000 is progressing very satisfactorily.

"The federal farm loan act, passed in 1916, outlined the general plan, in many respects rather vaguely, leaving much to the discretion of the farm loan board. It did not, contrary to a very general error of belief, put the government into the farm loan business, and provide a fountain from which there should come a continuous and unlimited flow of 'government money' for 'government loans' to farmers.

"Instead it provided for a new system (new to this country) of making farm loans and laid upon the farm loan board the mandate to create the organization and introduce to the American farmer the plan of borrowing, and to the American investor a security with which he was wholly unfamiliar. That this task has, in a little over three years of loaning activity, been so well accomplished that farm borrowers in every section of the country are anxious to avail themselves of the service, and that the investing public is a willing and apparently steady investor in the bonds at a rate exceeding $150,000,000 a year, should certainly be gratifying to the founders of the system.

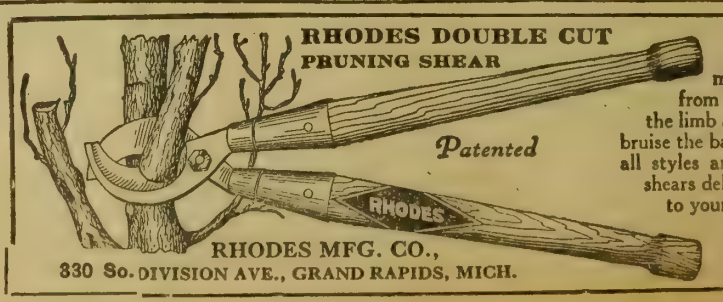
"The federal farm loan system having no source of loanable funds, except as they come from the investing public, must necessarily be affected in its operation by these conditions."

WALNUT HUSK MAGGOT

Experiments in the control of the walnut husk maggot, a serious enemy of the black walnut, have been conducted with success by the bureau of entomology, United States department of agriculture. This may not be of particular interest to California walnut growers but there is a possibility that it may sometime concern us.

The results of the work accomplished as far as it has gone are now published by the department in Bulletin 992, The Walnut Husk Maggot, by Fred E. Brooks. The habits and life history of the insect have been determined sufficiently to allow the study of control measures which have been conducted successfully in two important black walnut groves.

A lead arsenate spray was used in both instances with the result that in one grove a count of the nuts showed that four per cent had been attacked by the maggots, compared with 60 per cent destruction the year before. In the other the condition was estimated as 75 per cent better than during the previous season. Flies confined in roomy wire screen cages were observed to feed freely on sweetened water to which sufficient lead arsenate



THE only pruner made that cuts from both sides of the limb and does not bruise the bark. Made in all styles and sizes. All shears delivered free to your door. Write for circular and prices.

RHODES MFG. CO.,
330 So. DIVISION AVE., GRAND RAPIDS, MICH.

had been added to give the liquid a milky color. They, however, succumbed slowly to the poison, and further tests are thought advisable before this treatment can be fully recommended.

LETTUCE LATEST CROP TO BE STANDARDIZED

Practically all of the fruit grown in California is now packed and shipped under standardized rules, and the results have been to greatly improve the industry and increase the prosperity of the growers. The truck crop growers have been quick to see the advantage of standardization and have been applying to the state department of agriculture for inspection service.

In the past six years the production of lettuce in California has grown from practically nothing to an industry of enormous size. In 1916 there were 27 cars shipped out of Imperial Valley. In 1922 the estimated shipments will be 3,500 cars, and the Imperial Valley is only one of the sections of the state now growing this valuable truck crop.

U. S. GRADES ON POTATOES

More and more interest is being manifested in the grading of potatoes according to U. S. standards. On Tuesday, November 8, L. J. Weishaar and S. S. Rogers accompanied representatives of one of the large potato shipping companies on a survey of fields in the vicinity of Sacramento. A grading demonstration was given in several fields by Mr. Weishaar and the practical application of the U. S. grades demonstrated.

It is very probable that in some sections of California financial institutions and large shipping corporations will make advances on potatoes meeting the U. S. grades and intended for storage. The practice of making advances on stock graded in this manner obtains in many states and materially facilitates the handling and movement of the crop for both growers and shippers.

It is encouraging to the standardization bureau to note that applications for grading demonstrations and explanations of the U. S. grades are becoming more numerous.

BULLETIN ON DEHYDRATION

This is the season of the year when dehydration or preparation for handling another year's crop of perishable fruits is of peculiar interest. Dried fruits of California amounting in 1919 to about 185,000 tons, increased to 360,000 tons in 1920. The increase in acreage has been even greater so that in another three years our problem of fruit curing will be even greater.

Present day fresh fruit markets and canneries will probably not be able to absorb this increase. The whole question of providing the means of handling it is discussed in Bulletin 330 of the agricultural experiment station of the University of California. The bulletin is entitled "Dehydration of Fruit, a Progress Report." It is written by W. V. Cruess and A. W. Christie. Every fruit grower will find it of vital importance. Regarding advantages of dehydration the bulletin concludes:

Dehydrated fruits when cooked more nearly resemble fresh fruit in color and flavor; they are produced under more sanitary conditions that permit more exact control of quality and yield; less land and fewer trays are required to dehydrate a given quantity of fruit; and finally, dehydration makes it possible to combine all the steps of drying and packing in one building.

CONCRETE SEPTIC TANKS

(Continued from Page 551.)

the pipes are all unobstructed and not even partially clogged with dirt or lumber. The inlet pipe is then connected to the pipe from the house and the outlet pipe joined to three lines of three inch concrete drain tile. The drain tile will be laid about twelve inches below the surface of the ground and joints left open, that is to say, no mortar must be used in the joints. This permits the discharged fluids to be absorbed by the surrounding soil. The drain tile lines should be laid in the form of the letter "Y" and sufficiently extended to cover a large area of ground. Average conditions require that each arm be about 100 feet long. After this is done, cover the tank with earth to the level of the manhole covers. It is now ready for use.

It is sometimes the custom to plant a few shrubs around the manhole openings, thus effectually hiding all evidence of the tank.

IRRIGATION EQUIPMENT ASSOCIATION

Within the past few days there has been organized in San Francisco an association of dealers in irrigation equipment. The name of the new association is the Western Irrigation Equipment Association. Its officers are: President, Jas. A. Woods, Sacramento; secretary, C. A. Utley, San Francisco; treasurer, C. F. Zimansky, San Francisco; vice president, David J. Conant, San Jose. Executive committee—J. J. Merritt, Sacramento; P. H. Marlette, Los Angeles; W. F. Sanders, Visalia; Jos. L. Lawrence, San Francisco; W. F. Blackburn, Delano; F. E. Nittinger, San Francisco.

While only one of the directors is from Southern California, it is anticipated that the membership will increase and that ultimately the interest in the southern end of the state will demand the organization of an affiliating association.

The objects for which this association is formed are:

To promote the welfare of its members.

To distribute among them the fullest information obtainable in regard to all matters affecting the merchandising, installation and servicing of pumping machinery and connected equipment; to issue engineering and data sheets required in the business of selling, installing and servicing of irrigation equipment, and to collect data and information relating to the business.

To aid in bringing about more friendly relations between members and prospective members of this organization and with others with whom they may come in business contact.

To conduct a campaign of education that the buying public may be made fully aware of the possibilities of our great state under intelligent and thorough irrigation; of the superiority of artificial irrigation to uncertain rainfall and climatic conditions; and of the large returns that proper irrigation equipment may be made to yield.

To assist in marketing high grade irrigation equipment of American manufacture.

To elevate the standard of installation and housing of irrigation.

To exercise a corrective influence in the use of proper selling methods, eliminating the overrating and misrepresentation of irrigation equipment as marketed by members of this association.

To encourage the golden rule practice among members of this association.

POISON FOR BIRDS

Most of our birds need, and are fully worthy of, fullest protection, but there are occasions when English sparrows, linnets, buzzards, crows, wild geese and ducks may become not only a nuisance but a menace to health or at least to property. So to secure the latest information as to their control when they do become pests, we wrote to W. C. Jacobsen, superintendent of rodent control of the state department of agriculture. Mr. Jacobsen answers:

"It is a violation of the fish and game laws of the state to promiscuously spread poison for birds, as there is danger of killing valuable songbirds and also game birds. However, if the infestation is chiefly sparrows the poisoned cracked wheat has proved very satisfactory. The formula for this is: Mix thoroughly one-eighth ounce powdered alkaloidal strychnine with the same quantity of sugar and baking soda dry, and stir these into two tablespoons heavy corn syrup. Dissolve tablespoon laundry starch in cold water and add to a quarter pint of hot water enough to bring it to fairly thick consistency. Add to this starch paste the syrup containing the strychnine, soda and sugar, and pour over two quarts of cracked wheat or chick feed. This can be placed where sparrows are in the habit of feeding or places where sparrows are roosting. It should be placed off the ground as there is danger of poultry or domestic animals taking it. It also should be kept out of the reach of children and irresponsible persons."

Roeding's True Trees

When anyone is looking for a ranch home almost the first question that arises is the nature of the improvements. A place with a good ORCHARD INCOME is certain to sell first.

IMPROVE your vacant land by planting ROEDING'S TRUE TREES. Remember that the cost of a tree is not the only cost,—a good tree, like any other good article, is the cheapest in the long run.

We have a magnificent stock of properly grown, vigorous, well rooted Deciduous and Citrus Fruit Bearing Trees, Ornamentals, Vines and Roses.

Let us have your name and address and we will mail you new price list when printed.

THE NIGHT EXPRESS SPEAKS

Ne'er from my path I swerve
Rattling around a curve
Not vainly trusting to my trusty bars;
On through the hollow night,
While, or to left or right,
A city glistens like a clump of stars.

On through the night I steer;
Never a sound I hear
Save the strong beating of my steady stroke—
Save when the circling owl
Hoots, or the screaming fowl
Rise from the marshes like a sudden smoke.

Now o'er a gulf I go:
Dark in the depth below
Smites the slant beam the shoulder of the height—
Now through a lane of trees—
Past sleeping villages.
Their white walls whiter in the silver light.

—Cosmo Monkhouse.

SAFETY FIRST

By Ethel Field Foster

"HI'LO, Mister Billy!"

Bobbie came dancing into the room where Mr. William Alexander Prescott sat twirling his thumbs and eyeing the shiny tips of his patent leather oxfords while he waited for Miss Betty Morris to finish dabbing pink powder on the tip of her saucy nose, which her delightful little nephew had, on a previous occasion, confided to him was her final operation preliminary to descending upon him in all the splendor of her dazzling loveliness.

"Why, hello, Bobbie!" Billie Prescott replied cordially, lifting the youngster to his knee.

He was very fond of Bobbie. Indeed he had come to look forward to his twice weekly chats with Bobbie with almost as much eagerness as he anticipated his evenings with Betty, and that was saying a good deal; for Betty Morris was the idol of his heart, his dream of happiness, past, present and future. Prescott welcomed his small friend's affectionate confidences and advice. Often a word from Bobbie had changed his whole plan of procedure, usually with very advantageous results.

"Well, how are you tonight, Son?" he asked, cheerfully.

"L'right."

Bobbie snuggled down against his rough coat and wriggled himself into a comfortable position.

"That's good! And how's the puppie?"

Bobbie sat up with a jerk, his silky, dark, bobbed hair tossing, his big brown eyes shining. His round face was rosy with excitement and the words tumbled over each other in his eagerness to get them out of his small mouth.

"Say, he's the cutest puppie! Daddy says he's clever 'nough for the Norphum, but Muvver—she don't like um. She says he aren't broke an' she won't let me have um in the house, not ever! So I have to keep um in the g'rage. But Aunt Betty—she helped me make um a bed of—of—selsor—so's it aren't so bad. Don't you want to come out an' see um, Mr. Billy?"

Bobbie was already as far as the hall.

"C'm on, Mr. Billy!" he urged, impatiently.

But William Prescott shook his head regretfully.

"Not tonight, Bobbie; he's probably asleep, and it would be too bad, you know, to waken him. Some other time."

Bobbie's face fell, but he came back slowly to his perch.

"Oh, l'right," he said, resignedly.

He snuggled back in the curve of Prescott's arm and leaned his head against his shoulder. The next moment he was sniffing, speculatively.

"Got any Spearmint gum, Mr. Billy?"

"Surest thing you know! I brought you a whole package."

When Bobbie had succeeded in tearing off the paper and had crammed his mouth as full as he could chew Billy asked in quite a casual, though a very low tone.

"Say, old sport, I wonder if you happen to know how your Aunt Betty is going to dress for the masked ball tomorrow night?"

Bobbie suspended operations, with his wad stuck against the inner lining of his fat cheek. He mused thoughtfully. Yes, he knew all right.

"But I promised Aunt Betty I wouldn't tell!"

"But couldn't you tell—just me?"

Bobbie considered.

"I'll give you a box of chocolates if you will, Son."

The boy's eyes lit up with interest.

"Chocluts, Mister Billy? How many?" he asked eagerly.

"Um-m—tell you what, I'll give you a two-pound box of Chocolate Shop creams, kiddo, if you'll tell me."

Bobbie's eyes grew bigger.

"Two—pounds—of—Choclut Shop creams!" he gasped.

In all his five years Bobbie had never yet had all the chocolates that he could eat, and he knew that two pounds meant a lot—oh, ever so many more than he had ever had at one time before. And Chocolate Shop creams! Oh, magic word! His mouth watered and his eyes sparkled greedily. Still, Bobbie had a sense of honor, and he had given his word. It had been stupid of him to promise, but he had, so he hesitated.

Observing the hesitation, Prescott stifled his conscience with the reflection that "all's fair in love and war." Aloud, he said, coaxingly:

"Say, Bobbie, I'll do even more than that. I'll give you a watch—a regular man's watch."

Bobbie was so surprised he nearly fell off of Prescott's knee.

"A watch, Mr. Billy? Not a really, truly watch that goes?"

"Yes, a real one that goes."

"With wheels an' things, like yours an' Daddy's?"

"Yes, Son, just like that, and with a shiny nickel case."

Bobbie sighed ecstatically. To have a watch, all his very own! A watch with wheels that went 'round—a watch that would tick, tick, tick in his pocket and under his pillow at night! He might have withstood the chocolates, but the watch was too much for Bobbie. His sense of honor dwindled away. It was silly, anyway, to make such a secret of just a dress; everybody'd know tomorrow night, anyway, and what difference did one day make? Bobbie leaned confidentially closer and Prescott bent his ear to listen.

"She's—she's goin' to dress like a—a maid!" he burst out in a stage whisper.

"A maid? Oh, is she? Well, thanks, old fellow, that helps a lot."

Mr. Billy looked satisfied and pleased. Nevertheless, Bobbie considered within his small person that his item of news was hardly sufficient recompense for two whole pounds of chocolates and a watch that told time. He searched through his storehouse of memory for something to add to his offering. Oh, yes! He looked up eagerly into the man's face.

"Say, Mister Billy, I'll tell you something. Aunt Betty—I think she likes you, but she doesn't like the way you drive."

"What?" Prescott was surprised. "Doesn't like the way I drive? Why?"

"Well, she said—I heard her say it to Muvver—that you were the slowest man—she'd just like to see you go on high once!"

William Alexander was puzzled. He was usually considered a reckless driver, but Betty had had plenty of opportunities to judge for herself.

"Yes?" he prompted.

"That's all 'cept she said you'd been goin' on low for six months an' if you didn't speed up pretty soon she'd take Sam Carson—she sure would!"

Bobbie settled back with a comfortable sense of a debt cancelled. William Alexander Prescott emitted a low and subdued whistle, while a look of enlightenment spread over his countenance. He looked down thoughtfully at the small boy curled up on his knee.

"Um—I suppose, Bobbie, that Sam Carson gives you candy, too?"

Bobbie glanced up with no great display of interest.

"Oh—sometimes."

"Do you—I say, you know—do you like him as well as you do me?"

Bobbie sat up indignantly.

"Why, course not, Mister Billy; you

Oil Light Beats Electric or Gas
Burns 94% Air

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, V. N. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 day's FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

ferget wese chums!"

"To be sure, son!" Prescott gave the youngster a vigorous hug. "I knew you were a true pal, but I just wanted to test you. And I'll tell the world, Bobbie, you're a good kid and a grand old sport, and I'm awfully much obliged for your tip—I won't forget it."

He extended his hand as man to man and Bobbie shook it solemnly. His chest swelled with pride and when, a moment later, his mother called to him from upper regions, he said good night with grave dignity and mounted the stairs without a protest, as of course any gentleman should.

The following evening at a quarter past eight o'clock, William Alexander Prescott stood before his mirror, carefully adjusting a fine grey wig over his own fair hair, which he had brushed so vigorously it lay as smooth on his head as a shiny bald pate. The wig in place, he surveyed himself in the glass with no little satisfaction. Quite a handsome Colonial gentleman, he decided. Billy was very proud of his pale blue satin coat and knee breeches, his lace ruffles, silk stockings and buckled slippers. The outfit, on the whole, was exceedingly becoming. Tall, slim men with clean-cut faces, like his, certainly looked well in fancy clothes! He felt a slight regret that he hadn't known earlier that Betty was going as a maid. It might have been appropriate for him to appear in a butler's garb, but his suit had been ordered from the costumer's, and—oh well, he cut quite a handsome figure in his blue satin and he felt sure, from what Bobbie had told him, that when he got to going on high Betty would be, not merely pleased—that was too tame a word—she would be overwhelmed with joy!

(Continued Next Week)

RAISINS ARE MORE AND MORE POPULAR

By Marie B. Hartman, Manager Domestic Science Department, California Associated Raisin Co.

RAISINS were generally regarded as a holiday luxury a decade ago. It has only been since the war, when laboratory investigation of food products revealed the raisin as nature's own concentration of nutritive elements, that it has become a household staple. Even now the average housewife does not appreciate fully the many uses to which it may be put, but her attention is being constantly directed to it and she is utilizing it more and more in her cookery. It has a distinct appeal as a health food, and as it can be kept for an almost indefinite period it is becoming the one dependable, ever-ready emergency dessert.

Raisins are of three varieties—seeded, from which the seeds have been removed; seedless, grown without seeds; and clusters, served on the stem just as they are dried in the vineyards. The seeded and seedless varieties are used in cooking, while the seedless and cluster varieties are preferred as a confection, to be eaten uncooked. Raisins as a confection are growing steadily in popularity. It may be that the new custom of serving clusters at afternoon teas is a fad that will pass, but raisins are not only tempting and delicious—they have distinct health value because of their heavy content of medicinal iron. They aid digestion, they revitalize anemic blood, they satisfy a between-meal craving for stimulating food. Therefore there is every reason to believe that the custom will become more popular.

But the popularity of raisins in the kitchen is increasing tremendously, too. No matter through what process of cooking it may be put the raisin retains its vitalizing, health giving iron, easily assimilated in the digestive processes. To my way of thinking there is no more appetizing dish than stewed raisins served at breakfast. Nor is there made a pie more luscious than raisin pie. But these are the more common ways of serving cooked raisins. Everybody is familiar, too, with raisin bread and raisin cake.

Delicious salads may be made with raisins. They lend zest and flavor to puddings. No palate can resist the call of the raisin filled biscuit. In winter the housewife has merely to consult her recipe book, fetch a package or two of raisins from her pantry and bring to her table a hint of California sunshine along with the flavor of the fruits of midsummer.

Here are just a few suggestions as to what may be done with raisins:

Stewed Raisins

Cover ½ package of Sun-Maid raisins with cold water and soak over night. In the morning add a slice of lemon or orange. Place on the fire in the same water in which they have been soaked and allow to cook slowly for 30 minutes. Sugar may be added, but it is not necessary, as Sun-Maid raisins contain natural fruit sugar. Serve with or without cream.

Favorite Boston Cookies

½ cup butter or other fat, ¾ cup sugar, 1 egg, 1½ cups flour, 1 teaspoon baking powder, ¼ teaspoon salt, ½ teaspoon cinnamon, ½ cup chopped Sun-Maid raisins, ¼ cup chopped walnut meats.

Cream butter and add sugar slowly, creaming them together. Add well beaten egg. Sift 1 cup flour, baking powder, salt and cinnamon together and add to egg mixture. Mix remainder of flour with the raisins and nuts and add. Mix thoroughly and drop from teaspoon 1 inch apart on a flat greased pan. Bake in hot oven 10 to 15 minutes. This makes about 36 cookies.

Cottage Cheese Salad

¾ cup seedless Sun-Maid raisins, 1½ cups cottage cheese, ½ teaspoon salt, ¼ teaspoon pepper, lettuce, French dressing.

Steam raisins over boiling water until plump and tender. Moisten cheese with a little milk or cream. Add salt and pepper and mix with raisins. Arrange on crisp lettuce leaves and pour French dressing over it just before serving.

Raisin Pie

2 cups seeded Sun-Maid raisins, 1½ cups boiling water, ½ cup sugar, 1 tablespoon grated orange rind, 2 tablespoons corn starch, 2 tablespoons lemon juice, 1 tablespoon grated lemon rind, juice of 1 orange, 1 cup chopped walnuts.

Cook raisins in boiling water for 5 minutes; pour into it sugar and corn starch which have been mixed. Cook until thick; remove from fire and add other ingredients. Bake between two crusts. Walnuts may be omitted if desired.

Apple Sauce Cake

1½ cups apple sauce, 1 cup sugar, 2 cups flour, 1 cup seeded raisins, 1 teaspoon cinnamon, ½ cup butter, 1 tablespoon hot water, 1 teaspoon soda, 2 egg yolks, 1 teaspoon cloves.

Cream the butter and sugar, add dry ingredients, beaten egg yolks, then apple sauce. Beat thoroughly and bake in a moderate oven. Use white icing on this cake.

Caramel Raisin Apple

½ cup seeded Sun-Maid raisins, 6 tart apples, 2 tablespoons butter, 1 cup light brown sugar, 1/3 cup water.

Pare, core and halve the apples and arrange in a broad saucepan or aluminum frying pan. Cover with the raisins, then sugar; add the butter, cut into bits, add water and stew gently until apples are tender and the butter and sugar have formed a rich caramel. May be served hot or cold, with or without cream, or as an accompaniment to plain boiled rice.

HINTS FROM HOUSEKEEPERS

Green Tomato Mince Meat

Seventy-five medium size tomatoes chopped medium fine. Let stand a few hours, draw off juice and add as much water as juice, add 5 pounds light brown sugar (or half brown and half white if preferred), 2 pounds chopped raisins. Cook all slowly until tender. Add 2 tablespoons each of cinnamon, salt, cloves and allspice, 1 cup vinegar and boil until thick. Stir constantly. Lastly pare 6 large sour apples, core and chop, cook and when done add to the first part and mix thoroughly, then seal while hot in Mason jars. This is nice mince meat and can be used for fruit cake, plum pudding and pies. Add butter if used for pies. Will keep indefinitely. When opening jars for use one can add more apples and raisins if desired, and you cannot tell the difference between this recipe and the one made with meat. All ingredients must be chopped and not ground.—Mrs. F. H. Merlan, Montebello.

Tomato Soup

Put 2 cups of tomato puree in a saucepan and let come to boil. Break 2 or 3 sticks of macaroni, also add a little onion, 2 tablespoons rice and 1 tablespoon oil or butter. Cook slowly until done, then add 2 cups good rich milk. Let it get good and hot and salt just before serving.—Subscriber, Modesto.

HOUSEHOLD QUERIES

Canning Pimientos

I am a reader of your valuable paper and enjoy it so much. I am coming with a request for directions for canning pimiento peppers for winter use. Will you please print a recipe in this week's paper, if possible, as have ripe pimientos and do not know how to can them?—Subscriber, Chino.

Use only perfectly sound peppers. To remove seeds cut around stem of each with slender paring knife and remove inside portions. To peel place in hot oven from six to 10 minutes until skin blisters and cracks, watching carefully to see that they do not burn. Remove skin with slender paring knife. Flatten peppers and pack in horizontal layers in jars, adding no salt nor water. Put on top, place in water bath (home made canner of wash boiler or kettle.) Bring water to boiling point in canner, boil 20 minutes for pints, 30 minutes for quarts. Irregular or broken peppers may be cut in strips or chopped and canned in same way.

Cranberry Sherbet

I wonder if any one of the Cultivator readers can tell me how to make sherbet of cranberries? Last Christmas time we had some at a hotel dinner, and it was fine.—Subscriber, Los Angeles.

Cook 1 quart cranberries in 1 quart water until soft. Pour into jelly bag and press out juice. Add to juice 1½ cups sugar and juice of 2 lemons; stir until sugar is dissolved. Place when cool in a freezer packed with 3 parts ice and 1 part salt. When half frozen add the stiffly beaten whites of 2 eggs and finish freezing.

Dixie Relish

Would like very much to get a recipe for Dixie relish, so am asking the Cultivator household department.—Reader, Long Beach.

One quart chopped cabbage or chayotes, 1 pint chopped white onion, 1 pint chopped sweet red pepper, 1 pint chopped sweet green pepper, 4 tablespoons salt, 4 tablespoons mustard seed, 2 tablespoons celery seed (crushed), ¾ cup sugar, 1 quart vinegar. Soak pepper in brine (1 cup salt to 1 gallon water) for 24 hours. Freshen in clear cold water for 1 or 2 hours. Drain well. Remove seeds and coarse white sections. Chop separately, and measure the chopped cabbage, peppers and onions before mixing. Add spices, sugar and vinegar. Let stand over night covered in a crock or enameled vessel. Pack in small sterilized jars. When ready to pack drain vinegar off in order that the jar may be well packed. Pack relish in jars, pressing it carefully; then pour over it the vinegar which was drained off. Paddle the jar thoroughly to get every bubble out and allow the vinegar to displace all air spaces. Garnish each jar with 2 quarter-inch pointed strips of red pepper 3 inches long. Place these strips vertically on opposite sides of the seams of the jar. Cap, clamp, and boil 10 minutes.

For Christmas cake decorations, grease holly leaves lightly with butter, cover with icing and let dry. The icing leaves come off easily and make pretty decorations.

The Cultivator Patterns

3817. Set of Bags for Many Uses—These two models are cut in one size. No. 1 will require ⅛ yard of 32 inch material. No. 2 will require ⅞ yard of 24 inch material. Price 10 cents.

3799. Set of Hat and Coat for Dolls—Cut in 5 sizes for dolls: 16, 18, 20, 22 and 24 inches in length. For an 18 inch size the coat will require ⅞ yard of 24 inch material and the hat ½ yard of 18 inch material. Price 10 cents.

2970. A Set of Pleasing Toys for the Nursery—Cut in one size. Either style requires ¾ yard of 27 inch material. Price 10 cents.

3797. Dolly's New Dress—Cut in five sizes: 16, 18, 20, 22 and 24 inches in length, and will require ⅝ yard of 24 inch material for an 18 inch size. Price 10 cents.

2300. An Attractive Set of Toy Animals—The patterns are cut in one size only. It will require ½ yard of flannel for the sheep, ¾ yard for the dog, and ⅜ yard for the pig. Price 10 cents.

3836. A Useful Bag and Practical "Apron"—Cut in one size only—medium. It will require ½ yard of 36 inch material for the apron, and 1 yard for the laundry bag. Price 10 cents.

3438. Two Dainty Aprons—Cut in one size—medium. No. 1 will require ⅞ yard of 36 inch material; and No. 2 will require 1¼ yards. Price 10 cents.

2967. A Set of Toy Animals—Cut in one size. The cow requires ⅝ yard of 27 inch material and the horse ⅞ yard of 36 inch material. Price 10 cents.

1902. Doll's Long Clothes Set—Cut in three sizes: for dolls—16, 18 and 20 inches in length. It will require 2⅛ yards of 27 inch material for the dress, 1⅞ yards of 24 inch material for the wrapper and 2⅛ yards of 24 inch material for the coat, for an 18 inch doll. Price 10 cents.

3790. Doll's Play Suit—Cut in five sizes for dolls: 16, 18, 20, 22 and 24 inches in length. The suit will require ¾ yard of 36 inch material for a 24 inch size. Price 10 cents.

2264. House Coat for Men—Cut in seven sizes: 32, 34, 36, 38, 40, 42 and 44 inches breast measure. Size 38 requires 3⅛ yards of 36 inch material. Price 10 cents.

3770. A Dainty Boudoir Set—Cut in three sizes: Small, medium and large. The cap, No. 1, will require ⅜ yard of 27 inch material. No. 2 will require ⅝ yard. One pair of slippers will require ⅜ yard for a medium size. Price 10 cents.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH

HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cents) stamps for each number. In order to furnish our readers with the very best NEW YORK styles, all patterns ordered are filled in NEW YORK. Do not expect patterns under Two Weeks from date of order

Elberg Sale One of Season's Best

The Roselawn Shorthorn sale at Woodlawn, November 16, turned out to be one of the best sales of the breed held in America this fall and was a fine tribute to the esteem accorded the owner, Dr. H. M. Elberg. In order to provide an offering that would attract the patronage of leading western breeders Dr. Elberg cut rather heavily into his breeding plant and cataloged a number that he was very loath to part with. A large portion of the offering consisted of extremely desirable Scotch sorts, featuring the service of the good white bull, Roselawn Champion, that were readily absorbed by the breeders present.

The general average of the 21 females sold was $372. Only one bull was offered, owing to the fact that not many bull buyers put in an appearance.

A four figure top was established when the Blackhawk Ranch, Diablo, paid $1050 for the outstanding white junior yearling heifer, Village Beauty E. The same firm secured Gwendoline 4th at $500 and the richly bred Geraldine 7th at $600.

Caledonia Farms, West Sacramento, selected three good ones and were active bidders on all the better sorts. H. C. Muddux & Son, Sacramento, offered very strong support all through the sale and were the heaviest buyers, taking six head. Among their purchases was the good roan cow, Gwendoline Maid 16th, with a roan heifer calf at foot by Roselawn Champion at $750. Other buyers included Geo. H. Sawyer of Waterford and E. H. Thomas of Klamath Falls, Oregon.

Prior to the opening of the sale short addresses were made by Senator Benj. F. Rush, president of the California Shorthorn Breeders' Association, A. E. Lawson of Spokane, Washington, representing the national association and Professor Gordon H. True.

The sale was managed by the California Breeders Sales and Pedigree Company with Col. H. L. Hull of Iowa officiating as auctioneer and Col. John A. Davis of Manteca in the ring.

FEMALES

1, Village Beauty E, white, Mar. 1920; Blackhawk Ranch, Diablo, $1050.
2, Red Queen 4th, red, Mar. 1917; Caledonia Farms, West Sacramento, $525.
3, Gwendoline Maid 16th, roan, Jan. 1918; and roan c. c.; H. C. Muddux & Son, Sacramento, $750.
4, Gwendoline Maid 14th, red, Mar. 1918; and roan b. c.; Blackhawk Ranch, $500.
5, Gwendoline Maid 20th, roan, Sept. 1919; T. S. Glide, Davis, $250.
6, Gwendoline Lass, roan, Sept. 1920; E. H. Thomas, Klamath Falls, Ore., $435.
7, Geraldine 7th, white, Feb. 1920; Blackhawk Ranch, $600.
8, Acanthus Girl, roan, Apr. 1920; Caledonia Farms, $250.
9, Red Emerald 2d, red, Sept. 1917; Eliza Shepard, Glen Ellen, $285.
10, Roan Emerald, roan, Feb. 1921; E. H. Thomas, $210.
12, Elmgrove Violet, red, Oct. 1919; Geo. H. Sawyer, Waterford, $300.
13, Gloster's Lady, red, May 1920; Wm. Bond, Newark, $260.
14, Crescent Lady, roan, Oct. 1919; H. C. Muddux & Son, $500.
15, Roselawn 69th, roan, Jan. 1913; and red b. c.; H. C. Muddux & Son, $275.
16, Moss Rose Ruby 14th, roan, Jan. 1918, and red c. c.; Geo. H. Sawyer, $275.
17, Roselawn Ruby, roan, July 1920; Geo. H. Sawyer, $175.
18, Roselawn Flora 2d, red, Sept. 1919; E. H. Thomas, $235.
19, Mary Welcome, roan, Oct. 1920; H. C. Muddux & Son, $225.
20, White Princess, white, Oct. 1920; H. C. Muddux & Son, $250.
22, New Year's Gift, roan, Jan. 1921; Butte City Ranch, Butte City, $195.
23, Roselawn Lady, roan, April 1921; H. C. Muddux & Son, $280.

BULLS

26, Roan Champion, roan, Sept. 1919; E. W. Briggs, Healdsburg, $250.

Holsteins Sell at Stockton

The consignment sale of Holsteins arranged by four members of the San Joaquin County Holstein Breeders Association and held at Stockton, November 15, drew one of the largest crowds of the fall season. Prices for the most part were fairly satisfactory but as in several late sales there was light demand for bulls and young heifers.

J. M. Campbell of Escalon made the top consignment and also sold the top female. The entire herd owned by J. C. & A. F. Ramsay of Modesto was cashed in the sale at moderate prices. Edwards Bros., of Escalon, contributed eight head. R. Stevens of Stockton offered four head, including the 32.79 pound cow, Miss Gelsche Walker Kornedyke. This good cow sold as the bargain of the sale at $375.

The sale was managed by the California Breeders Sales and Pedigree Company of Sacramento. Col. Ben A. Rhoades of Los Angeles was in the box as usual and Col. Davis called for bids from the ring.

A representative list of sales follow:

Consigned by J. M. Campbell, Escalon

1, Lazon March Alcartra, Mar. 1916; 23.08 lbs.; David Salfield, Stockton, $300.
2, Countess Potoki Alcartra, Oct. 1915, 20.21 lbs.; W. H. E. Leffler, Stockton, $445.
3, Lady Headlight Alcartra, Nov. 1916, 19.82 lbs.; J. F. Miller, Ripon, $360.
4, Escalon Miss Wit Alcartra, Mar. 1918; Chas. N. Howell, Lathrop, $275.
5, Karlray Zoa Walker, Aug. 1919; W. H. E. Leffler, $275.
6, Escalon Merry Walker, Dec. 1919; Chas. N. Howell, $185.
7, Karlray Virginia Walker, June 1919; W. H. E. Leffler, $310.

Consigned by M. J. & B. A. Edwards, Escalon

8, Daisy McKeen, Aug. 1913; Paul Herman, Lodi, $225.
10, Bellinghurst Alcartra Onyx, Apr. 1916; W. H. E. Leffler, $180.
11, Prilly Glista, Dec. 1919; E. S. Beecher, Stockton, $200.
12, Imperial Prince Jose, Oct. 1919; E. B. Straight, Redding, $185.
13, Sarcastic Queen Torchlight, Feb. 1920; E. S. Beecher, $145.
14, Blondy Pontiac Ignaro, July 1920; C. C. Fisk, Stockton, $125.
15, Aralia Pontiac Goldstone, Apr. 1917; E. B. Straight, $255.
16, Bonita Pietertje Pontiac, Aug. 1917; C. E. Early, Manteca, $135.

Consigned by J. C. & A. F. Ramsay, Modesto

17, Dora Hengerveld of Sylvian Iris, Oct. 1913, 23.14 lbs.; David Salfield, $340.
18, Miss Clair Walker, May 1920; J. F. Miller, $180.
20, Princess Fay Spotfoot, Oct. 1916; Glenwood Stock Farm, Riverside, $185.
23, Lady Mary Hengerveld, July 1915; E. B. Straight, $300.
25, Lady Mary Woodcrest, Nov. 1918; David Salfield, $275.
29, Pauline Korndyke Alcartra, April 1918; F. V. Perry, Modesto, $195.
35, Ruth Hengerveld of Linwood, May 1915; Glenwood Stock Farm, $270.
36, Miss Campbell Walker, Sept. 1919; Steve Simon, Stockton, $175.
37, Princess Harriet Woodcrest, Oct. 1920; Glenwood Stock Farm, $170.

Consigned by R. Stevens, Stockton

39, Miss Gelsche Walker Korndyke, Aug. 1914, 32.79 lbs.; David Salfield, $375.
40, Lady Ulrika Bonnie DeKol, Oct. 1916; C. E. Early, $265.
41, Helena King Segis, Apr. 1917; F. V. Perry, $300.

Selling Cattle on Cost Plus Basis

By R. P. Royce

Replying to an article with above title in the California Cultivator of Oct. 22 a contemporary comments:

"SPECIAL PRIVILEGE DIES HARD!"

"The article on another page of this issue came into the office during our absence in Los Angeles and was written without knowledge that another journal was allowing one of its staff to try to discount his knowledge, impeach the sincerity of the motives of our contributor, and lampoon his honest and intelligent effort to make California a fairer field for the pursuit of the Holstein industry. The article in this issue therefore takes no account of the onset which is being made upon him as the penalty which interested parties are trying to inflict upon him and upon this journal for speaking out and speaking truly in the interest of all who are growing purebred animals in this state and in the interest also of all those who desire to improve their stock—if they are made sure that they can get the agencies for such improvement fairly and without favor. To secure this is not easy. Special privilege is known by everybody to be a tough boulder to blast and we entered upon the undertaking with full knowledge of that fact. Those who organize ostensibly for the advantage of all producers in such a way that an inner circle gets a rake-off from the sale of what an outer circle produces, will not quickly let go of the profitable privilege which they conspired to possess, and when a journal, posing as the friend of all producers, appears as the apologist and promoter of the well-stacked game, it cannot be expected to loosen its hold, because it sets out to get its profit from the very same special privilege that it defends. As this journal has given offense to all participators in the clean-up of this special privilege, we must of course take our punishment, and probably we ought to be grateful that our contemporary entrusts the wielding of the rod to a somewhat bumptious youth, who seems to be hoping to make his way in California by impeaching our best popular institutions and by trying to dictate policies and methods for efforts undertaken by our best people and to which efforts he contributes nothing but language and effrontery. Some windmill maker lost a good efficiency gauge when he took to agricultural writing."

The above unsolicited, yet nevertheless highly appreciated, editorial from the pen of the editor in chief of our esteemed indignant contemporary would ordinarily be passed without comment, but it seems we would indeed be lacking in journalistic courtesy did we fail to acknowledge the rather unusual honor accorded this member of our staff.

In order to give such distinction it must have been necessary to lay aside for the time being such weighty matters in hand as the selection of the next governor of California, the solution of the economic ills of the world and a comment of the untoward climatic conditions of week before last as compared to a similar period in 1875.

Furthermore we desire to acknowledge our appreciation of approval vouchsafed this journal for "having intrusted the wielding of the rod to a somewhat bumptious youth." We at all times strive to please and the fact that our bumptious youth, in wielding the rod, managed to raise a sizeable welt, and at the same time meet with the approval of the-veteran-editor-by-the-Bay, is we take it, further evidence of good judgment on our part.

We do deplore the fact that our habitually indignant contemporary had to brush off the old and tattered "special privilege" cry to find a starting point for his gentlemanly remarks. It's the first time in years we have seen this "old stuff" used and we are sorry indeed that it was felt necessary to drag out this trick of the old fashioned muckraker.

We rather imagine that our friends would make greater headway with this cry of special privilege and claim of journalistic sanctification if the breeders of this state did not recall that but a few years ago that same paper set out on a campaign to expose the sins of the organized milk producers of this state. The editorial flip-flop they negotiated at that time still stands as a record piece of journalistic acrobatics.

DAIRY PRODUCTS SHOW

There are more than a million head of dairy cows in the Pacific Slope States, and the value of the manufactured products is in excess of 150 million dollars annually. California alone produces over 70 million pounds of butter per year, and consumes about 15 million gallons of ice cream annually. Moreover, an infant dairy industry is developing in the Hawaiian Islands, in Mexico, and on the West Coast of South America.

It is hard to visualize all this, and impossible to do so unless a general annual gathering can be had here on the Pacific Coast. The Pacific Slope Dairy Products Show that will be given in Stockton, December 5 to 11, is the first effort to bring together the organizations that have held their conventions separately and to assemble a comprehensive exhibit of dairy products manufactured in the states west of the Rocky Mountains. Those who will participate are: Manufacturing organizations, milk distributors, exhibitors of dairy products machinery, equipment and supplies; University of California, state department of agriculture, United States department of agriculture, California dairy council. There will be scoring contests in butter, cheese, ice cream, and market milk and cream. Medals and ribbons and many handsome cups and cash prizes will be awarded. The show will be held in the State Armory.

WOOL GROWERS MEET

The fourteenth annual meeting of the California Woolgrowers Association will be held at Fresno this year, Monday and Tuesday, November 28 and 29. The meeting will be called to order at 1:30 p. m., Monday, and will be held in the council chamber of the city hall.

Frank J. Hagenbarth, president of the National Woolgrowers Association, will be present at the meeting. Hagenbarth has been leading the fight before Congress on tariff matters, and will have first hand information along these lines. President F. A. Ellenwood was one of the committee who appeared before the ways and means committee of the house last winter before the passage of the emergency tariff bill, and will tell of his trip.

On the program will also be representatives from the State and United States departments of agriculture, including the forest service.

Bull Calves by the World's Champion

We have a number of splendid bull calves sired by Tritomia Pietertje Ormsby, grand champion of the National Dairy Show, for sale. They are all backed up by high production records and all are good individuals.
Every animal tuberculin tested and guaranteed a breeder.
Let's keep them in California.
Terms to responsible parties.

Livestock News Notes

Manager Lovell of the Blackhawk Ranch, Diablo, reports the sale of the two year old Shire stallion, Blackhawk King, to a Japanese buyer. Blackhawk King was sired by Dovecote King and is out of the show mare, Quanea Diamond. He won his class at the recent San Francisco Show.

Dr. E. J. Weldon, veteran Holstein breeder of Sacramento, has sold his entire herd, consisting of around 30 head, to the Hayes Stock Farm, Sacramento.

The highest priced Holstein bull in the last Chester County, Pennsylvania, sale was a son of Sir Aaggie Mead De Kol, the bull that A. W. Morris & Sons Corporation sold to a New York firm for $12,000.

Kolrain Finderne Bess, a Holstein cow owned by the Dutchland Farms of Massachusetts, has just completed a record of 1281 pounds of butter from 32,563 pounds of milk. The milk yield represents the highest year's production to be registered by any cow east of the Rocky Mountains.

Following the Elberg Shorthorn sale, E. H. Thomas of Klamath Falls, Ore., visited Caledonia Farms, West Sacramento, and selected two females. He purchased the roan ten year old Grenadine in calf to Pine Grove King and a heifer by the same sire and in calf to Gainford Matchless.

One of the largest sales of grade dairy cattle recorded in recent weeks was made last week when J. R. Bush of Merced purchased the entire herd of grade Holsteins owned by the Whitaker Dairy, located between Davis and Dixon. The sale included nearly 150 head and the price paid was above $150 each.

President C. N. Hawkins of the California National Livestock Show reports that the recent show at San Francisco was successful beyond the most optimistic hopes of the directors. A final checking of accounts is under way and it is believed that the actual deficit will be only $7000 or $8000, a large percentage of which can be charged up to future shows. San Francisco business interests are coming forward with offers of aid for next year's show and it is certain that a greater show than ever will be provided for 1922.

Professor Gordon H. True of the college of agriculture, University of California, has left for Chicago to attend the International Livestock Exposition where the university will have extensive exhibits in the various fat classes.

A. E. Lawson, western representative of the American Shorthorn Breeders' Association, with headquarters in Spokane, is arranging to spend the first three months of 1922 working with California breeders.

John A. Bunting, Hereford breeder of Mission San Jose, writes that he is now getting the first calves by his young herd sire, The Peer, and that the first baker's dozen are as attractive and uniform in excellence as he could hope. Several of these calves have already been started on their show career and will make their debut at the 1922 shows.

Another California breeder who will attend the great Chicago show will be C. N. Hawkins of the Pacheco Cattle Co., Hollister. Mr. Hawkins will take advantage of the opportunity to boost for next year's show at San Francisco and has hopes of inducing a number of the leading Eastern herds to come out this way.

The California Holstein Breeders' Association is beginning to clear the decks for the 1922 Guaranty sale, the Holstein classic of the West. Secretary Hughes has announced that the forthcoming sale will be up to the high standard of former years and that it is probable that the sale will be held at Los Angeles in place of Sacramento. It is also probable that only cows and bred heifers will be offered.

HEREFORD BREEDERS TO MEET NEEDS OF RANGEMEN

The remarkable expansion of breeding herds of registered Herefords in the west within the past few years is now bearing fruit in the form of annual crops of bulls in increasing numbers, a fact that is of distinct interest and advantage to the many range cattle owners who have been compelled to go east of the Rockies for their Hereford bulls in the past.

While the number of Hereford bulls raised annually in our western herds will not begin to fill the demand for years to come, yet progress is being made, and members of the Pacific Coast Hereford Cattle Breeders Association, of which J. I. Cazier, Wells, Nev., is president, and J. A. Bunting, Mission San Jose, is secretary, feel that the time has come when some of their public sales should be arranged with the convenience and needs of range cattle owners in mind. To that end it has been decided that the next sale under auspices of the association will include sixty or more registered Hereford bulls selected for fitness for range service, and that a considerable number of them will be offered in lots to suit the carlot buyer, a sale practice which is entirely new in California. Entries are already assured from some of the foremost Hereford herds in Oregon, Nevada, and California. The sale will be held at University Farm, Davis, during the annual Stockmen's Week, the last week in February, and will be under management of California Breeders Sales and Pedigree Co., Sacramento, who will begin preliminary arrangements for the sale about the first of December. The sales company will extend its usual credit on the basis of one-half cash, balance in six months, another feature that has proven attractive in sales during the past season.

FARM NAME AS TRADE-MARK

Many farmers throughout the country are finding it to their advantage commercially to give their farms attractive names that can be used in connection with marketing their products. Provided the quality of the product is kept up, a reputation is quickly established for the farm and the commodity that makes the name of real worth in dollars and cents when it comes in competition on the market with other products The name becomes in time a real asset to the owner and has a money value much like the good will in other kinds of business.

In England many farms have borne distinctive names for years, which have become famous in connection with various products. This has been especially true in the case of certain breeders of cattle. The name of the farm passes current among cattle breeders as a sort of guarantee that animals from that farm are all that is claimed for them. The practice is coming into vogue in this country and with it a desire to be protected against others adopting the same name and thereby benefiting by the reputation already established for it.

The United States government through its patent office, which interprets the trade-mark and label copyright laws, is prepared to give this protection within certain limits. Some of the states have laws authorizing the registration of farm names with the state authorities and no one else in that state is allowed to use the name. This is merely for use within that particular state. The United States patent office, however, is prepared to register farm names as trade-marks if they meet specified requirements. This will protect the owner against their use by others anywhere in the United States. There are certain requirements, however, that must be met as in the case of other sorts of names used as trade-marks under the federal trade-mark law. The farm name, for one thing, must be used by the farmer as a trade-mark on his products that he ships to points outside his own state; in other words, a commodity that moves in interstate commerce. It must be printed, stamped, or otherwise attached to each parcel. The federal law makes no provision for the registering of names used as trade-marks on commodities that are shipped only within the state.

Although it is thought advisable, it is not necessary that the name be arranged into any distinctive design. Under the trade-mark act of 1905 it was not possible to register a name that is merely geographical, or merely descriptive, or is merely a surname not displayed in some particular or distinctive manner. Such marks, however, can be registered under the act of 1920, if they have been in use by the applicant in interstate commerce for not less than one year. In this way Congress sought to give recognition to a common-law right in a name used as a trade-mark on the ground of its use.

Officials of the patent office point out that the names of varieties of seeds or plants can not be trade-marked. For instance, a seed grower may develop a variety of watermelon, which he chooses to call the "Excelsior," and to sell the seed as such. Even though the seed goes into interstate commerce its name can not be registered, and any buyer who reproduces that variety of seed can sell it under the same name. "Excelsior" is the name of the variety, it is pointed out, and no matter who produces it the seed is still of that kind and can be offered for sale as such by anyone producing it. This aiso applies to strains and breeds of livestock.

HUBAM CLOVER IN AFRICA

In a recent issue of the Farmers Weekly of Bloemfontein, South Africa, an account is given of the growth of Hubam clover from seed sent there from the Iowa experiment station:

"February 20, or 153 days after planting, the clover was seven feet high. It was harvested on March 15, the height by that time being seven feet six inches. The plant is an annual. The white flower is somewhat like that of the ordinary clover but elongated and spiral, being about one and a quarter inches long. The stems of the plant when full grown were very thick and during the summer a little of the plant offered to stock was not particularly appreciated.

"A trial was also made of planting some of the seed in the autumn, and so far the results are most satisfactory. The growth is not of course so rapid but cattle devour it greedily in the winter. There are also certain indications in the winter growth going to show that the plant may develop in certain directions even more favorably here than in the States. The experiments so far have been carried out on rich soil in the garden, and it is of course not to be expected that the growth would be so free or rapid in ordinary field culture.

It is too soon yet to say what the ultimate value of this crop will be in South Africa. It apparently stands at least moderate frosts well and points to being a most valuable fodder plant in the winter. The hay, in spite of the coarseness of the stems, will presumably also be of considerable value, but it is thought that its greatest potentiality is as a green manure for plowing in, in view of its heavy bulk and great rapidity of growth."

OUTGOING WEIGHT

"It has always been the aim of this department to recommend that the farmer in selling his commodities where they have been stored in warehouses always have them weighed when leaving the warehouse," says R. C. Melvin, chief, bureau weights and measures of the state department of agriculture. "Of course, I understand that they are weighed at the time of entrance and a warehouse receipt issued. It will be an additional cost to have a reweigh on what we term the outgoing weights, but in the long run I am satisfied the farmer will gain thereby.

"For illustration: Barley, wheat and oats increase a great deal in weight during the largest part of the year. The buyer nearly always purchases the warehouse receipt and pays on the original weight, thereby gaining a great deal on the producer. Rice concerns in purchasing a warehouse receipt always insist upon an outgoing weight at the time of delivery for the reason that rice loses in storage and they are sure there will be quite a shortage from the original receipt according to the weight at time of entry at the warehouse. So it is my opinion after a great deal of experience that what is good in one case in in another.

"Another commodity that I have in mind and which the farmer is sometimes careless in marketing is cream and milk. Owing to the close inspection by this department of creameries they generally have the actual tare weight indicated on the can. There are some containers, however, that have no indication, therefore, the small producer is not aware of the weight of the empty container and is unable to check the actual amount of cream or milk which he markets. In this case, I would suggest that the producer insist upon the tare weight of the container being intelligibly marked thereon so that he can check off."

The weather bureau in Arizona reports "Not many more days of frostless weather will be required to fully develop the top crop of cotton. Much of it has already come to maturity and if what the weather bureau calls radiation nights continue for a week longer a full crop is assured.

QUALITY
does count,

you can't deny it! You'll have to admit that an aeroplane motor gives any motor oil its hardest task and Puente Products are steadily taking a lead in this new industry.

Kern County Milk Scoring Contest

In the milk scoring contest held in Bakersfield on November 5, only those selling their own product were eligible to compete. Of the 43 dairymen competing 32 were selling their milk wholesale. No dairy milking less than three cows could compete. The largest dairy competing milked 125 cows, and this dairy scored 92.2 per cent. The smallest dairy had three cows and scored 93 per cent. The samples submitted were taken from the herd milk, not from selected animals. The contest was under the supervision of County Dairy Inspector G. P. Penfield.

The milk was scored by Dr. Hugh G. Asselstine of the state department of agriculture on the following points: Bacteria 35, sediment 15, butterfat 15, flavor 15, solids 15, acidity 5.

The prizes consisted of $50 offered by the chamber of commerce for the best scoring milk. Peacock & Goode offered $10 for the best score made by any of their patrons, and Underwood's Jersey Dairy gave $7.50 for the first and $5 for the second best score by their patrons.

The first prize was won by Mrs. J. Sullivan from a dairy of 24 cows with a score of 97 per cent. The Peacock & Goodes' prize went to William Destafini with a herd of 29 cows, scoring 94.2 per cent. The Underwood prizes were awarded to F. M. Snow, scoring 94.7 per cent from 14 cows, and Gafner & Holdner from a herd of 51 cows, scoring 94.5 per cent.

The contest developed the fact that the small herds scored no better than the larger ones. Of the 12 dairies scoring over 90 only three milked as few as six cows. The three highest scores came from dairies with 24, 27 and 39 cows, respectively. It also brought out the fact that the weakest point in the scoring was in the solids, not fat. Fourteen entries failed to score 12 points on this; 10 failed to score 12 on sediment; 11 did not score 12 in butterfat; 12 fell below 12 on flavor; 11 counted over 20,000 in bacteria and eight did not score 4 in acidity. A majority of those who scored low in solids also fell down in flavor.

Taking the contest on a whole it was a success and aroused a great deal of interest among a thousand people who attended the show, particularly among the dairymen. We hope to repeat this in the spring and a comparison of the results will be interesting.—G. R. Penfield, County Dairy Inspector.

Earl Graham Wins Cultivator Prize for October in State Dairy Cow Competition

Five grade cows owned by Earl Graham of Compton, had the highest average production of butter fat of similar groups in herds entered in the state dairy cow competition during the month of October, viz.: 57.73 pounds, and the California Cultivator prize for that month was accordingly awarded to him. The production of the individual grades for the month was.

	Age, Years	Days in Milk	Milk Lbs.	Butter Pct.	Fat Lbs.
Niger, gr. H.	Mature	154	1392	5.0	69.60
Hauser, gr. H.	Mature	161	1345	4.4	59.18
Pinkie, gr. Sh.	4	183	1398	4.1	57.32
Pansy, gr. H.	4	163	1116	4.8	53.57
Valentine, gr. H.	Mature	181	1020	4.8	48.96
Average		168	1254	4.60	57.73

This is the fourth time that this prize has been awarded to Mr. Graham, as he also won it last October, December and February, each time for the production of five different grades in his herd. It will be seen that the production of the prize winning grades for October ranged from 69.60 to 48.96 pounds butter fat, the average production of milk being 1254 pounds, with an average fat content of 4.60 per cent (average distance from calving at beginning of month, 168 days.)

These cows stood first among similar groups of five grades in 15 dairy herds in different parts of the state that competed for the Cultivator prize the past month. The average production of butter fat for five of the groups came above 50 pounds fat during the month, viz., E. Graham, Compton, 57.73 pounds; P. Iverson, Grizzly Bluff, 54.58 pounds; W. D. Early, Grizzly Bluff, 53.05 pounds; J. A. Genzoli, Loleta, 50.55 pounds, and M. Pontoni, Arcata, 50.41 pounds.

Prior to the month of October this prize was won six times in succession by Humboldt County dairymen and for six months prior to that by Los Angeles County dairymen. The neck-to-neck race between the two counties gives the honors for the time being to the latter county, for the very creditable production of nearly two pounds butter a day per head for the month, for grades that had been milking five or six monhs at the beginning of the month.

Preparing Pork Products on the Farm

Every farmer can well produce the pork and pork products which are consumed on his farm, for selling hogs and buying pork involves profits, but not to the farmer engaged in the practice. This point is brought out in Farmers' Bulletin 1186, published by the United States department of agriculture, which tells how hogs should be killed and describes different methods of curing and canning pork on the farm. Highly nutritious and palatable pork products for home use are easily made. Pork can be cured and canned in a number of ways, and the variety of products affords a supplement to the daily meals.

A hog of medium condition, gaining rapidly in weight, yields the best quality of meat. A reasonable amount of fat gives juiciness and flavor to the meat, but large amounts of fat are objectionable. Smooth, even, and deeply fleshed hogs yield nicely marbled meats. The meat of old hogs will be improved if they are properly fattened before slaughter, but young hogs from 8 to 12 months old are best for furnishing the home meat supply.

The bulletin emphasizes especially the importance of selecting only healthy hogs for slaughter and of thoroughly cooking all pork products used for food.

Hogs intended for slaughter should not be kept on full feed up to the time of killing. It is better to hold them entirely without feed for 18 to 24 hours prior to that time, but they should have all the fresh drinking water they want. It is essential to have the proper equipment for rapid and skillful work at killing time. Such equipment includes a straight sticking knife, a cutting knife, a 14 inch steel to keep the knives sharp, a hog hook for holding the animals, a bell shaped stick scraper, a gambrel for holding the hog to facilitate cleaning and cutting the meat, and a meat saw. If the hog is not too large a barrel is a convenient receptacle for scalding.

Complete directions for killing and cleaning a hog, properly cutting the portions of meat, rendering lard, making sausage, smoking cured meat, and home canning of pork and pork products are described in the bulletin, copies of which can be obtained free on application to Department of Agriculture, Washington, D. C.

VALUE OF MILKING MACHINE

The mechanical milker is a valuable addition to the dairyman's equipment, says C. C. White in Farm and Ranch. After becoming familiar with the machine a man can operate three units, thus milking from 30 to 35 cows per hour. The elimination of labor troubles is the greatest feature of the milking machine. The farmer who keeps a number of high grade cows is anxious to avoid labor troubles and to insure the production of clean, high grade milk on an economical basis. Farmers who keep only eight or ten cows find the milking machine profitable. Farmers who find it necessary to hire a man to attend to the milk-

ing should investigate the possibilities of the machine milker. One person can handle a two, three, or four unit outfit successfully. There is no danger that a good milking machine properly handled will lessen the flow of milk.

NECESSITY OF MEAT INSPECTION

From time immemorial a form of meat inspection has been practiced by certain classes of people. They recognized even in that period that there existed in animals at times diseases which were transmissible to the human family. With their meager knowledge of scientific principles and a lack of facilities for determining the factors causing disease, they depended largely upon observation and from results thus obtained they drew their conclusions. In this way they discovered that those who did not eat the flesh of certain species of animals were not subject to diseases frequently found in other people who did.

In the Mosaic laws pertaining to the subject we find that certain people followed a religious teaching which forbids its adherents to eat flesh of some species of animals and requires a limited inspection of other species, the flesh of which was to be used as food.

Since the field of bacteriology has been explored to some extent the public mind has been awakened to the danger which threatens health through the eating of diseased or contaminated meat or its products. While other foods are now regarded under certain conditions capable of transmitting to humans certain dangerous diseases, some of us have not yet fully realized that no other article of food demands more attention by the consumer than meat.

For this reason it becomes necessary to devise means for protecting the health of the people by establishing a system of meat inspection under the supervision of persons qualified to recognize abnormal or insanitary conditions of meat and prevent its being disposed of as human food. Systematic meat inspection does not only comprise inspection of meats but inspection of livestock before slaughter as well as the condition of their carcasses. Of equal importance is the maintenance of sanitary conditions of slaughtering establishments to prevent contamination of the flesh of healthy animals.—G. W. R.

GOMBAULT'S
CAUSTIC BALSAM
The Perfect Liniment
For External Use on
The Human Body

It is astonishing how quickly Caustic Balsam relieves Stiffness and Lameness, Rheumatism, Neuralgia, Strains, Sprains, Lumbago, Backache, Sore Throat, Chest Cold, Stiff Joints, etc.

Serious results through Blood Poisoning are liable from scratches, cuts or wounds from rusty nails or other metal. This great remedy applied at once will prove a preventive, is a perfect antiseptic, soothes while it heals. *What it has done for others it will do for you.*

Swine Mineral Mixture

By John M. Evvard, Iowa Experiment Station

Three practical swine mineral mixture formulas are:

Simple Mineral Mixture—Equal parts by weight of air slaked lime and salt, or of wood ashes and salt. This mixture furnishes the main essential elements principally lacking in our corn and small grains.

A Simple, but More Complete Mineral Mixture—Equal parts by weight of air slaked lime, salt and bone meal (or spent bone black). This mixture differs from the simplest one in that bone is added, this addition insuring an abundance of bone making materials.

A Fairly Complete Mineral Mixture—Salt, common, flake form, 30 pounds; spent bone black, or bone meal, finely ground, or bone flour, 25 pounds; commercial kainit, or potassium chloride, or wood ashes, 12 pounds; sulphur, flowers of, 10 pounds; air slaked lime, or limestone, finely ground, 10 pounds; Glauber's salts or sodium sulphate, 5.7 pounds; Epsom salts or magnesium sulphate, 5 pounds; copperas, or iron sulphate, 2 pounds; potassium iodide, 0.3 pound; total, 100 pounds. This mixture carries most of the essential elements in practical and well known forms. It is compounded so as to be acceptable to those who wish to have included such popular, time-honored and tried substances as sulphur, Glauber's salts, copperas and others that are widely used in general swine feeding practice.

These mineral mixtures may be self fed, free choice style, or combined with the feeds. About a pound per month per hog has been the suggested allowance when hand fed.

There are no patents or copyrights on any of these formulas. There are no secrets in their compounding inasmuch as they are simple mixtures of simple, commonly known and widely used substances. They are not perfect, but represent an effort to supply a pressing need. Later, these formulas will be modified, when we have more experimental work to justify changes. "Mineral mixture" experiments are now in progress.

Before suggesting the three tentative formulas given above, one preliminary test involving some seven months was conducted with gilts. The test covered the breeding season and pregnancy period of the gilts, and also a two months suckling period on the gilts and their litters. Four groups of ten gilts each were fed. The basal ration allowed all lots was shelled corn and tankage. The sows were in dry lot up to about a week to ten days after farrowing, when they and their litters were transferred to bluegrass pastures.

Group I received no minerals. Group II received the "Simple mineral mixture," self-fed. Group III received the "Simple but more complete mineral mixture," self-fed. Group IV received the "Fairly complete mineral mixture," self-fed.

In this preliminary investigation the results showed up favorably for mineral feeding; in general, the groups receiving minerals made a somewhat better showing than the "No mineral" check group. In many particulars Group IV, receiving the "Fairly complete mixture," made the best showing.

However, further investigations, now in progress, are apparently showing up more favorably for the simple mixtures and less favorably for the complete than did the preliminary test. In the "Mineral mixture" comparisons run to date, the basal ration has been corn and tankage, a very good combination of feeds, a combination generally considered as not needing to be supplemented with a mineral mixture. It appears, however, that even so good a ration as corn and tankage may be made somewhat efficient through proper mineral additions. Ordinary rations poor in mineral should show a greater benefit from mineral feeding.

While we have secured in our various tests a good many favorable results through the feeding of such common mineral substances as lime, salt, bone meal and other similarly classed materials, and while our preliminary results with "mineral mixtures" for swine have shown up so far in favor of mineral feeding, yet we cannot as yet say definitely just what kind of general mineral mixture is best.

Our preliminary results on the feeding of the mineral mixtures, formulas for which are given, must not be considered as final or conclusive, but only as suggestive at the present time. Reports of investigations now in progress will be made public in the near future.

The main deduction to be drawn from our "mineral" experiments to date is that proper "mineral feeding" has, when considered on the whole, been of some advantage under the conditions of our tests.

Concerning the use made of the above prescribed formulas, as given out in December, 1920, it is in order to state that a good many farmers are buying the specified individual ingredients and mixing them to their satisfaction. Many county agents have made these mixtures in rather large quantities and distributed them to their swine growers. Druggists in some localities have filled these formulas for their patrons.

COW TESTING PROVES THEM OUT

The Southern Los Angeles County Cow Testing Association recently organized makes report for October with a showing of 150 cows averaging better than 1½ pounds butterfat per day. Chas. Harrington has the high test cow of the association. This cow produced 96.5 pounds fat. Earl Graham's cow, with a production of 94.7 pounds fat, takes second place. On the other hand, Earl Graham's pure bred bunch of 12 cows tops the list with 55.5 pounds average while his grades make an average of 53.3 pounds. Supervisor of Tests L. J. Birge furnishes us with table showing averages from the higher producing dairies of the association as follows:

	No. Cows	Butterfat %	Butterfat Lbs.
Earl Graham, Compton	43	4.08	53.3
Earl Graham (pure breds)	12	3.6	55.5
C. V. Harris, Compton (grades)	36	3.69	47.0
W. Zylstra, Belleflower (grades)	21	4.0	43.1
Tim Murphy (grades)	13	4.1	43.1
Peter Wilber (grades)	35	4.03	42.9
D. H. Dillion (grades)	22	4.1	41.9
Agee Bros. (pure breds)	13	3.5	40.6
J. Tilford (grades)	41	4.29	40.0
Chas. Harrington (grades)	21	4.18	39.9
S. W. Bockema (grades)	16	4.42	39.2
J. H. Leahy, Belleflower (grades)	26	5.04	39.2
Fred De Vries (grades)	41	4.3	38.2
Geo. Webb, Compton (grades)	54	3.99	37.5
J. W. Gains, Clearwater (grades) (Jerseys)	16	5.0	37.5
Geo. Hight (grades)	31	3.97	37.1
R. M. Howie (grades)	19	4.39	36.0
Palmer (grades)	11	3.9	32.3
M. A. McClain, Long Beach (grades)	104	3.98	29.7
Paul Taylor (grades)	9	3.98	31.7

POISONOUS MILKWEED

Stock poisoning by weeds on the western ranges is often so insidious that it is difficult to trace the cause of the trouble to its correct source. This is true of the various milkweeds, some of which have poisonous properties, while other suspected varieties have been found to be non-poisonous. The Mexican whorled milkweed is believed to have caused much of the sheep trouble attributed to some other varieties. This plant ranges from Mexico northward through California, western Nevada and southern Washington to eastern Idaho. It is also known as the narrow leaf milkweed. Feeding tests indicate that the poisonous qualities are most pronounced in the leaves. Only sheep were used in the feeding experiments, but other investigators assert from experience that cattle also are subject to poison.

Poultry accounting schools were held at Petaluma, November 10 and Santa Rosa, November 11, under auspices of the Poultry Producers of Central California and the agricultural extension service.

DOUBLES THE VALUE OF HIS COWS
Uses Kow-Kare with Grain Feed with Wonderful Results

This Yankee dairyman knows the value of increasing the milk yield through perfect cow-health. R. D. Johnson of Groton, Conn. writes:

"Have used your Kow-Kare for the past two years, and have never fed cows any grain without giving one tablespoonful of Kow-Kare. I have positively doubled the worth of cows. I bought a cow a year ago for $75 and she was giving fourteen quarts per day, and she has just freshened again three weeks ago, and I am getting twenty-four quarts per day, and Kow-Kare made this cow. Have four others that I bought that were giving from fourteen to sixteen quarts and now I am getting twenty-two quarts per day from them."

Kow-Kare is a valuable winter aid in the cow barn because it keeps the assimilation and digestion in healthiest condition when the feed must be mostly concentrates and roughage. Winter housing and feeding reduce the vitality and activity of the milk making organs. Kow-Kare restores and keeps digestive and genital functions healthy. Barrenness, Abortion, Scouring, Bunches, Milk Fever, and Loss of Appetite are banished by using Kow-Kare as directed.

The milk yield tells the story of the healthy herd—and poor milkers mean a loss. Let Kow-Kare help you to a bigger dairy profit. General stores, feed dealers and druggists sell it at the new reduced prices—65c and $1.25

MEASURING AND MARKETING TIMBER

The department of agriculture at Washington has for mailing Farmers' Bulletin 1210, "Measuring and Marketing Farm Timber." It applies primarily to Eastern woodlot sections, but California is increasing its production of cordwood and even of finish lumber, that is, we mean now production on the small farms rather than in the great commercial timber sections. For such as are interested this bulletin of 60 pages will have a fund of valuable information.

The seven counties organized in the North Bay Counties Association have formally adopted constitution and by-laws. The objects of the association are to engage in civic, promotion and development work in Del Monte, Humboldt, Mendocino, Lake, Napa, Sonoma and Marin Counties.

Legal Queries

Louis B. Stanton, attorney, 343 Wilcox Building, Los Angeles, will answer legal queries in this department.
Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 317 Central Ave., Los Angeles.

Trees on Line

My neighbor has walnut trees growing very close to the line, which draw water from my property. Can I pick up the walnuts that drop on my line? Can I shake the limbs off and let them fall on my land? Can my neighbor shake the branches overhanging my line and descend and pick up the walnuts falling on my land without my consent? Can I cut or saw the limbs off that are over my line?—Subscriber, Fullerton.

It has been held by the highest court of this state that overhanging branches, in so far as they are on or over the land of a party, belong to that person, he cut cut them off or trim them at his pleasure; that in fact such branches growing over a party's land are his property, which he may claim as against the owner of the tree. This being the case, you have the undoubted right to shake the limbs overhanging your line, pick up the walnuts thereon, or cut off those limbs, and convert them into stove wood. Your neighbor, who owns the trunk of the tree, has no right to pick these nuts, cut the limbs, and certainly has no right to descend upon your land and pick up the nuts falling thereon or in anywise interfere with any exercise of any property right in these nuts or branches. It may be stated that the courts in other states have come to different conclusions as to these matters and it is possible that the court in this state might under the peculiar circumstances of the decision referred to make a different finding. This answer is given on the law as it now seems to stand.

Liability of Stockholder

To what extent can a party be held responsible for liabilities of a stock company as a stockholder?—Subscriber, Tulare.

Each stockholder of a corporation is individually and personally liable for such proportion of all its debts and liabilities contracted or incurred during the time he is a stockholder as the amount of stock or shares owned by him bears to the whole of the subscribed capital stock or shares of the corporation.

Liability for Horse

I hired out as a farm hand and agreed to bring my two horses with me, for which I agreed to make no additional charge. My employer's horse kicked one of my horses, causing a severe wound, which the veterinarian says will never heal and it will be necessary to kill the horse. Have I any claim against the employer for the value of the horse?—Subscriber, Orland.

In such a case, it would be necessary either to show that the animal which did the injury was vicious and accustomed to do such kicking and that the owner knew of such propensity or that the injury was attributable to some neglect upon the part of the owner. Even if the animal is merely of a mischievous disposition, of which the owner is well aware, it would probably render him liable, where he failed to inform you of such propensity.

Right of Survivorship

A deed has been made to myself and wife. Can a clause providing for the right of survivorship be now inserted in the deed or would a new deed be necessary?—Subscriber, Loomis.

The insertion of any such clause in the deed would constitute a material change and might invalidate the transaction. In order to constitute a joint tenancy, it would be necessary to deed this property back and have a new deed made providing therefor.

* * *

When a joint deed is made without reference to the right of the survivor, can either owner without the consent of the other in any way convey his title or interest to a third party? Is the property not vested in both with the right of survivorship whether mentioned in the deed?—Subscriber, Delmar.

The necessity for the words "right of survivorship" has been much questioned. As a matter of safety, it is always best to have the words inserted. Either party in a joint deed can, of course, convey his interest in the property to a third party, but such third party takes in the property only the interest which his grantor would have; that is to say, an interest in the property during the life of his grantor. Upon the death of such grantor, the whole property would pass to the survivor as joint tenant and the transferee would be divested of his interest. It is probable that in such an instance if homestead was filed on the property, it would preclude any such transfer.

Homestead

Property is held by husband and wife as joint owners with right of survivorship. Does the declaration of homestead add anything to this form of tenancy and is the declaration attached hereto valid?—Subscriber, Delmar.

The filing of the declaration of homestead probably does not make any material difference, in the particular instance stated, other than to protect the interest in the property against the claims of any creditors up to the value of $5000. The form of declaration accompanying the question was incorrect in that it did not state the value of the property.

Loan to Ex-Service Men

Is the loan to ex-service men now available? If so, can it be had to start business of any kind, such as a garage, pool hall, or other line? Where is it necessary to apply for the loan? Can the money be used for business elsewhere other than in California?—Subscriber, Inyo.

The purpose of the present act is well defined in a section thereof, which states that the object of this act is to furnish to veterans the opportunity to purchase farms, homes, and homesites, and the administration of the provisions of the act is vested in the Veterans' Welfare Board. The activities of this board are limited purely to real property. It has offices at different points throughout the state, but a letter addressed to Sacramento will undoubtedly be forwarded to the proper office.

* * *

Where can I apply for loans to ex-service men? When will they be available?—Subscriber, French Camp.

A letter addressed to the Veterans' Welfare Board, Sacramento, California, will, no doubt, bring the required information.

Responsibility for Son's Act

While I was away from home, my 15 year old son without instructions from me, felled a tree and broke two wires. Can the power company collect from me for interrupted service and repair labor?—Subscriber, Anaheim.

A father is not responsible for the wrongs done by the son, unless through some means it can be shown that the son was acting as the agent of the father or in some way that he ratified the act of the son. Therefore, it would appear that under the facts stated, you could not be held responsible for the damage caused.

DEVELOPMENT OF TUBERS IN THE POTATO

How do potatoes grow?
Why do some vines produce many tubers and others only a few?
Do big seed pieces produce better potatoes than small pieces?
When does the tuber begin to form?
When does moisture have the most effect on the production of potatoes?
What is the relation of soil to potato production?

These are a few among many questions which have been asked about the growth and yield of one of America's largest and most distinctive crops, and which former observers have been able to answer only incompletely. Experts in the bureau of plant industry have conducted a series of experiments in potato growth, the results of which are published in Department Bulletin 958, "Development of Tubers in the Potato," which has just been issued. The information contained is of interest not only to the plant physiologist but also to the practical grower, as a knowledge of the relation of the setting and subsequent development of tubers of the potato may to a certain extent be put to practical use.

Tuber formation begins in general at about the end of the period of flower bud development, although this is not in all cases an exact criterion. Experiments showed that the number, as well as the size, of potatoes in a hill increased for several weeks after the first potatoes were large enough to dig. A small increase in the weight of tubers was found to occur even after the vines had been killed by frost. The maximum rate of growth of the tubers was found to occur about the last of August or first of September, approximately 80 days after planting.

An interesting development of the experiments was that the number and weight of tubers per hill were found to be influenced by the size and kind of seed. Whole potatoes used as seed yielded heavier than half potatoes, and these more than quarters, and the larger the seed piece the greater the yield per hill. A whole potato used as seed yielded more than half or quarter potato of equal weight.

The experiments showed that apparently light soils are better for potatoes than heavy soils. The lowest production of tubers, with respect to both number and weight per hill, was on the heaviest soil; the highest numbers and yields were produced on the lightest soil. The department experts deem it possible that these results might be modified somewhat under different climatic conditions.

Two year tests with irrigation indicate that the early application of water before tuber formation had started resulted in an increase in the number of tubers as well as in the weight per hill. Late irrigation actually increased the weight but made little difference in the number of tubers per hill. The irrigation experiments were not carried to a final conclusion but indicate that each application of water at almost any period in the growth of the plant, provided excessive quantities are not used, may be expected to produce an increase in the weight of the crop, but that little or no increase in the number of tubers is likely to result from irrigation after tuber formation is well started.

The bulletin contains an interesting description of the tuber bearing parts of potatoes and their method of growth. It may be obtained free on request to Division of Publications, U. S. Department of Agriculture, Washington, D. C.

Plans are being perfected at the headquarters of the California Tuberculosis Association for the Annual Christmas Seal Sale. Since California had its first organized sale in 1914 when a million seals were sold the sale has rapidly increased until last year 20,000,000 were sold.

The Brooklyn packing plant of the California Prune & Apricot Growers is to be doubled in capacity and size. Water shipments of bag prunes are received at this plant for packing and processing preparatory to Eastern and European distribution.

Canned goods can now be sent from Pacific coast ports to England for 90 cents per hundred.

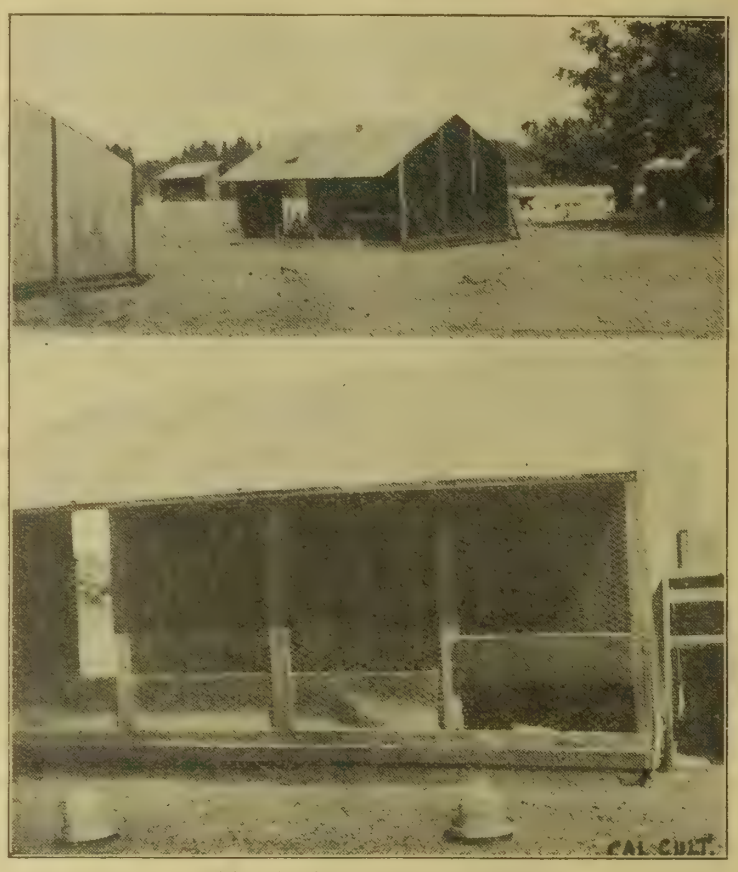
A Cheap Poultry House

By Jean A. Koethen

POULTRYMEN who wish to cut down the cost of housing their flocks will be interested in these two pictures taken on the ranch of R. J. Major at San Gabriel. Figure 1 shows the type of colony house Mr. Major has adopted and the arrangement of the houses on his five-acre ranch.



Either Laying House or Brooder

Fig. 1. Colony laying house on Major Ranch, San Gabriel. This house accommodates 75 cens and cost $15.
Fig. 2. The same house arranged for brooding accommodates 250 to 300 chicks. The chicks have all the sunshine there is and a stove for night and dark days.

These houses are light structures of 1 by 3, covered with tar paper. Each house is 12 feet long by 8 feet wide, 6 feet high in the center and 4 feet high at the sides, and holds about 75 White Leghorn hens. The south side of the house is open, and the roof on that side is extended to give protection from sun and rain. A door at the end admits the caretaker and provides additional ventilation in hot weather.

These houses were covered in the beginning with second grade paper, and most of them have been in use three years without requiring any considerable repairs. As their original cost was only $15 apiece, Mr. Major is well satisfied with the experiment.

The five acre ranch is divided into yards 156 by 156, with six houses and 450 hens to each yard. As the houses are in rows the number of steps which must be taken in feeding and cleaning is reduced to the minimum, and the entire flock of 2,000 hens is cared for in about two hours a day.

Double Purpose Housu

But this type of colony house is particularly well adapted for brooding, and Figure 2 shows one arranged for this purpose. Pipes are run from the brooder stove at the right end through the house just under the droppings board, and the chicks are brooded on straw under the pipes. The one fault of this arrangement is that the chicks are too much inclined to pile up at one end, but this could probably be prevented by the use of a felt or flannel hover. Six of the houses, all in one yard, are fitted with stoves and used for brooding. When the chicks outgrow them they are spread out among more houses.

A good many poultrymen are adopting this system of colony houses because of the cheapness and are finding that their hens are just as healthy and lay just as many eggs as when housed in the more expensive long laying houses.

Poultry Queries

Conducted by Jean A. Koethen

Hens Do Not Lay

My Black Minorca and R. I. Red hens look healthy, have plenty of greens, sour milk, three kinds of grain and a good house and large yard, but have not laid for four months. What is the matter?—Subscriber, Laton.

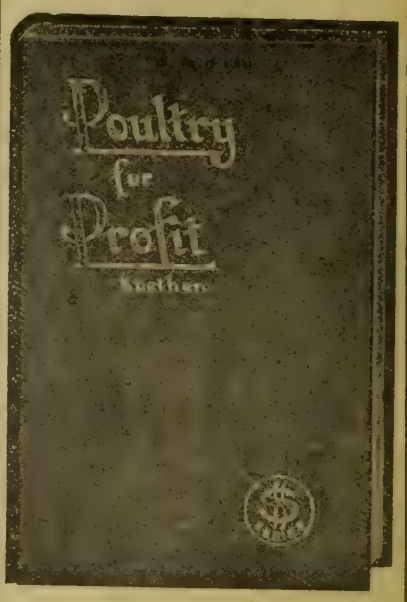
You do not say how old your hens are nor whether or not they are through the molt. Maybe they are too old to lay in the fall, and it is very probable that the R. I. Reds are too fat. If you are giving three kinds of hard grain and no mash the chances are they are all too fat to lay well. Hard grain alone puts fat on most hens. If you will keep a good commercial mash before them and cut down the scratch feed to a quart a day for 20 hens, making the scratch at least half wheat, I think you will soon see a difference. You do not say what grains you are using. If milo is used to the exclusion of other grains or is more than half the grain ration, that alone would explain the lack of eggs. Most poultrymen find they cannot use much milo in hot weather.

White Minorcas

Will you kindly inform me if White Minorcas lay white eggs and if the flesh is dark looking like that of the Black Minorca, also what heavy hens in California lay a white egg. We are eastern people just settled here and everything is strange to us.—Subscriber, Corning.

All Minorcas, Black and White, lay large white eggs. Those who keep Minorcas think very highly of them as both egg and meat producers, but they have not the place as market birds that R. I. Reds, Wyandottes and Plymouth Rocks have. If you are

Poultry Can Be Made Profitable



Making use of information gathered from experienced poultry writers who have been guided by their practical experiences will always result in profit from poultry.

Los Angeles, Cal.

taking up commercial egg farming you are practically obliged to keep White Leghorns. No other breed can compete with them for this purpose and no other is kept on the big egg farms. If you are general farmers and want a flock of hens for you own use with a few eggs and fryers to market when prices are high you will make no mistake in choosing R. I. Reds. They are by far the most popular fowl in this state, next to White Leghorns, have been bred for egg production till many are heavy producers, and hens and fryers bring the highest market price.

Mating Turkeys

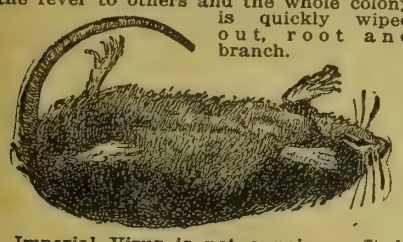
Will ten gobblers running with 100 hens without separation into pens fight to such an extent as to cause infertility?—Subscriber, Turlock.

Experienced turkey breeders say they will and prefer to keep their breeders in separate pens, ten hens and one tom in each pen. One man finds this plan successful: He keeps his hundred hens in one large yard and his ten toms in another, and allows two toms to run with the hens each day, changing every day, and maintaining a regular succession.

Easy to Kill Rats and Mice

Amazing Discovery Wipes Out Every One—Not a Poison

This remarkable discovery is Imperial Virus. It is a fluid, true Virus, in sealed bottles—thus insuring full strength and potency until used. It affects only Rodents, such as Rats, Mice, Gophers, etc. Spread upon bread, meat, or grain, this bait is greedily eaten and the Virus is extremely fatal. It sets up a burning fever and the pests die outside, hunting air and water. They also communicate the fever to others and the whole colony is quickly wiped out, root and branch.



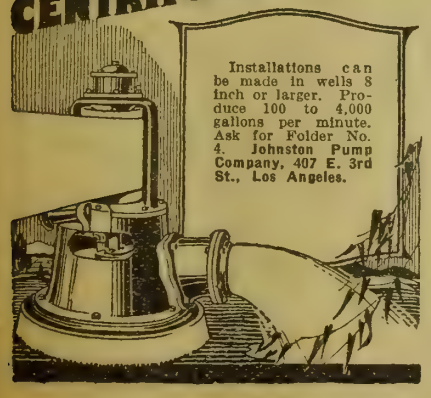
Imperial Virus is not a poison. It is entirely harmless to humans, poultry, stock, pets, etc., and is therefore, the only safe method by which houses, farms, factories, warehouses, stores, etc., can be rid of these pests.

GET YOURS FREE

To quickly get wide distribution, the manufacturers of this amazing Virus are making a Special Offer of two big, full sized (double strength) $1.00 bottles for the price of one. Use one and sell the other to a neighbor, thus getting yours free. Special inducements for full or spare time effort if you wish to act as representative. As this offer may not appear again, you should write at once.

Send $1.00 today, (bill, money order, check, etc.) and you will receive the two $1.00 bottles, post paid. If more convenient, send no money; just your name and address to the Imperial Laboratories, Room 602, 2110 Grand Ave., Kansas City, Mo. You can pay the postman $1.00 and a few cents postage when the two bottles arrive. Imperial Virus is backed by an Iron-clad guarantee to do the work to your entire satisfaction, or your $1.00 will be refunded any time after 30 days without question or quibble.

JOHNSTON TURBINE CENTRIFUGAL PUMPS



Installations can be made in wells 8 inch or larger. Produce 100 to 4,000 gallons per minute. Ask for Folder No. 4. Johnston Pump Company, 407 E. 3rd St., Los Angeles.

The Encanto subscriber who asked how many hens should be mated to one tom will please note that ten hens are generally allowed. I know of no breeder who gives his toms more than ten, and some prefer eight or nine.

Roupy Pullets

About three weeks ago I purchased a dozen Leghorn pullets four months old and seemingly in perfect condition. Now roup has broken out among them. I have saturated their heads two or three times daily with a permanganate of potash solution, greased them well with carbolated vaseline and given them sulphur in the mash in the ratio of 1 to 20 but they do not respond. They are in the same yard with my old hens which are as vigorous and healthy as ever. Do you think I should separate them, or are the old hens strong enough to throw off the infection if it should attack them?—Subscriber, Madera.

I think your pullets are suffering from the change from their former quarters to their present environment. Even though your houses were cleaner and more comfortable than the one they came from there might be something in the change that would give them a cold. For instance, if they have been crowded in a small coop where they were very warm at night and you put them in a large house where there was a good deal of air space, the change from more to less heat and from less to more ventilation might at this season cause roup. A change from a higher to a lower elevation or from a protected place to one where they were exposed to a strong wind might produce the same result. If this hypothesis is correct your main effort must be to make them as comfortable as possible. Put them in the warmest, sunniest yard you have. If they are not protected from wind during the day give them some protection. See that their house is as warm as is consistent with good ventilation. Feed plenty of green and a substantial ration with a good proportion of corn in it. For treatment, try this spray which is recommended by Dr. Sanborn: Extract of witch hazel, 4 tablespoons; liquid carbolic acid, 3 drops; water, 2 tablespoons. Spray mouth and nostrils twice a day, squeezing the bulb five times for each nostril and twice for the mouth. Greasing the head will do more harm than good because it makes the bird chill more easily, and sulphur is a remedy for chicken-pox, not for roup. The old hens are not likely to take the disease from the pullets, but the pullets will do better by themselves.

Rheumatic Turkeys

My young turkeys four and six months old are troubled with knots and swellings at the knee joints and walk as if their knees were out of joint. The birds eat well and fly up to roost, but their knees and feet seem to grow worse.—Subscriber, Madera.

Turkeys that run on damp grass or ground or are exposed to chilly winds sometimes contract rheumatism, as these birds evidently have done. Removal of the cause is the best cure. Keep them in the driest, sunniest place available and paint the swollen joints two or three times a week with tincture of iodine.

May Be Ticks

I have just bought a ranch, poultry and all, and would like to know how to rid hens and house of a bug that looks like a grain of sand when it is young and like a bedbug when it is grown. When small they seem to stick tight or bury themselves in the skin, and they work on the hens at night. The hens are pale and do not lay.—Subscriber, Fresno.

I am afraid these bugs are ticks, which look like bedbugs, are, in fact, the bedbug of the poultry house, and sometimes attach themselves to the body of the bird. Their home is in the cracks, under roosts, etc., in the house, and you will have to work hard to clean them out. After cleaning out all droppings thoroughly, sweeping down dust and cobwebs, and hosing thoroughly, paint every bit of wood, inside and out, with a strong solution of crude carbolic acid, 1 part carbolic to 4 of kerosene, or even stronger. Do this not once but three or four times in succession, several days apart. Clean out all nest litter and paint inside of nests, and if the floor is dirt, clean out several inches and bring in clean sand. You may be able to get rid of the ticks on the hens by greasing well with lard or with lard and sulphur mixed into a paste. If you do not, try touching each one with a swab dipped in undiluted lysol. This is very poisonous if taken internally and must be handled with care.

POULTRY SHOW AT SANTA ANA

Poultry fanciers of Orange County are announcing Southern California Poultry Show at Santa Ana, December 13-17.

Activities of poultry producers during the last few years have been along the line of cooperative marketing associations and giving greatest attention to the commercial side of poultry. However, it goes without saying that there will always be lovers of the pure bred and fancy or ornamental breeds.

BROODINESS CAN BE BRED OUT

At the Massachusetts experiment station, where a detailed experimental study of broodiness has been made, it was ascertained that previous to the practice of selection the average hen in the flock was broody 3.88 times a year. After painstaking selection was practiced for five years, this tendency to broodiness was reduced so that the average egg producer in the flock developed broodiness only 0.36 times a year. A study of the correlations between broodiness and egg production shows that pullets that are very broody tend to lay relatively few eggs between their broody periods.

THE HEN HAS IT ON MA

The coal-oil light's a burning bright;
(It will, sometimes, when it feels right);
Pa sets there reading, slick as sin,
The latest poultry bulletin;
Then, half to Ma, and half to me,
Pa ups and speaks: "I see," says he,
"As how correct illumination
Will make hens lay like all Creation;
I've thought it out; the help's all hired;
I guess I'll have the henhouse wired."
Ma stops and peers and sews away,
Does Ma, and then I hear her say:
"I wisht I was a blamed old hen;
Maybe they'd wire the homestead, then!"
—Cuyahoga Co. (Ohio) Farm Bureau News.

SUGAR BEET PRODUCTION

The sugar beet industry of the United States produced more than 1,000,000 tons of sugar, and the 106 factories, 97 of which were in operation in 15 states, paid American farmers more than $99,000,000 for their beets in 1920.

In a comprehensive new bulletin, No. 995, "The Sugar Beet Industry in the United States," the United States department of agriculture says that almost any fertile soil capable of producing good yields of other crops will, if properly handled, produce good sugar beets. This statement, however, is restricted by considerations of climate, moisture, and topography as related to the question of producing enough beets of the requisite sugar content within reasonable hauling distance to maintain a sugar beet factory.

The bulletin reviews the history of the sugar beet industry from the first mill, built in 1870 at Alvarado; analyzes soil, climatic and topographic requirements, and deals at length with the necessary equipment, best methods of planting and cultivation, the important relation of the sugar beet to the livestock industry, the management of parallel and rotating crops, the labor problem, insect and disease enemies of sugar beets, and the business of selling beets to the sugar manufacturers. "The successful production of sugar beets on any farm depends to a great extent upon the temperament of the farmer and upon his attitude toward the production of this crop," says the bulletin, adding that the man who handles cows, especially dairy cows, is more inclined to take up the growing of such an intensive crop as sugar beets and is more apt to succeed in this line than the grain or forage crop man.

A list of more than 50 department publications on different phases of the beet sugar industry is included in the bulletin, which may be had free upon application to the Department of Agriculture, Washington, D. C.

Byron Jackson Service

WHEN you buy a Byron Jackson deepwell turbine your purchase includes Byron Jackson service.

A service built on an engineering foundation that goes back to the very beginnings of irrigation in the west.

Starting in the factory-testing department, this service accompanies the pump through the installation and down through the years of operation by means of a state-wide system of service cars.

Your water development problem is assured prompt and expert attention in our engineering department

prevent loss of power

Because: they press so snugly and firmly against the cylinder walls at *all* points that gas cannot waste past them. All of the fuel is compressed into power. And they do this satisfactorily through thousands of miles of service because they are cast *individually* from a special gray iron that retains its elasticity and tension under the stress and strain of the hardest usage. They prevent carbon accumulation too, and thus remove another cause of power loss.

Lettuce: Demand moderate, market firm. Mostly leafy stock. Locals: Field crates, best, 75@1.00; few, 1.25; poorer, 50@60.
Parsnips: Lug, 70@85.
Peas: Market steady. Lb., fancy, 10@12; poorer, 8@9.
Peppers: Locals: Bells, green, per lug, 90@1.00; chilis, 45@50; pimientos, 75@90 lug.
Rhubarb: Lug, 75@90.
Squash and Pumpkins: Market steady, movement good. Hubbard, banana, pumpkins, 1@1½ lb.
Tomatoes: Market firm on good stock. Locals: No. 1, per lug, mostly 1.25@1.35; poorer, 75@1.00.

FRESH FRUITS

Apples: Demand and movement slow, market steady. Locals: Windfalls, 1½@2; Romes and Winesaps, 4@5 lb; few best Delicious and Jonathans, Yucaipa section, 5@7 lb. Watsonville: Fancy 4 tier Bellefleurs, 1.50@1.60; poorer, 1.25@1.40; 4½ tier, 1.15@1.25; B grade, 4 tier, 1.25@1.35; C grade, 1.15@1.25. Washingtons: Jonathans, extra fancy, large, 3.00@3.25; medium, 2.75@3.00; fancy medium, 2.65@2.85; small, 2.50. Oregons: Spitzenburgs, extra fancy, medium size, 2.75@3.00; fancy, medium, 2.65@2.85. Winter bananas, extra fancy medium and large sizes, 2.75@3.25.
Avocados: 3.00@6.00 doz.; lb., 25@40.
Cranberries: Market steady. Massachusetts: Late Howes, 24.00@25.00 per barrel; ½ barrels various varieties, 10.00@10.50. Northwestern, 1/3 barrel, 7.00@7.50.
Grapes: Demand moderate, market firm. Per lb.: Malagas, 7½@9; Red Emperors, 7@8; Cornichons, 6½@7½.
Melons: Casabas, 1@2 lb.
Olives: Ripe, lb., 4@6.
Pears: Demand moderate, market firm. Bartletts, mostly 5½@8.
Persimmons: Lb., best, 10@15; others, 7@8.
Pomegranates: Lb., 5@9.

CITRUS FRUITS

Grapefruit: Market firm. Northern, per packed box, 3.50@4.00. Arizonas, 5.00@5.50; few, 5.75.
Lemons: Demand slow, market steady. Locals: Special pack, mostly 4.00; market pack, 2.50@3.00; loose boxes, 1.50@2.00; lugs, 75@1.25.
Oranges: Demand good, market weaker. Navels, special brands, 5.50@6.25; loose boxes, 3.00. Valencias, special brands, mostly 5.50@6.25; market pack, 4.00@5.00, according to size and quality; culls, field boxes, 2.25@2.50.

HONEY

Demand has been better and movement heavier during last two weeks. Market firm, better feeling. Stocks continue to decrease. The heaviest movement is on light amber alfalfa; supplies of other grades, especially white stock, limited. Due to late rains, colonies in Southern California have more brood than usual at this date, and as a result winter stores are being consumed too rapidly. Carloads f. o. b. usual terms at loading points: White orange, no sales reported, supplies nearly exhausted; white sage, mostly 11½; light amber sage, 8½; light amber alfalfa, 6½@7, mostly 6½. Considerable California honey being sold by producers in small lots at prices averaging 3@7 per lb. higher than carload prices. Hawaiian carloads, f. o. b. San Francisco: White, 6½; light amber, 5; honeydew, 4. Beeswax: Quiet. Too few sales to establish market.

Grain Exch. price bid Nov. 21:
Barley: 100 ton lots, Dec. del., 1.32.

HAY

Alfalfa Growers of California report:
Market strong in all parts of the state. There is a very good general demand in central as well as local markets which promptly absorbs receipts at full prices, even though these arrivals are pretty heavy, as was the case last week in Los Angeles. Consumption of baled alfalfa always shows an increase at this time of the year, but this year the increase seems to be more marked than usual. One of the causes is undoubtedly the fact that smaller stocks than usual are being carried by dealers and users; in addition to this, there seems to be an increase in the consumption of milk and cream in the centers of population all over the state; part of this is undoubtedly the result of the vigorous growth in population of the large and also many of the smaller cities, and in addition to this there also seems to be a permanent per capita increase in the consumption of milk, cream, etc. Another outstanding feature is low stocks in the hands of growers in most of the important producing and shipping districts, which at the same time have a considerable local market. In several of these districts growers now receive same prices on ranch which their hay would bring at present in the central markets; that is, up to $6 per ton above central markets. These districts may have to ship in some toward the end of the present crop year.
The alfalfa situation in Nevada, which during the summer looked hopeless for the growers there, and which for some time caused California growers to fear complete demoralization of our markets, has been improving steadily since about two months ago when the growers commenced to organize, and it is now in pretty good shape. Owing to lack of rain home consumption has increased considerably; this, combined with a much improved shipping demand, stiffened prices considerably, and they are now pretty well in line with those of California. The lack of rainfall is commencing to also make itself felt in many parts of California.
There were 1,450 tons of grain and alfalfa hay received on the Los Angeles tracks the week ending November 19, with a carryover of 550 tons.
Prevailing prices last week, delivered in the vicinity of Los Angeles:

No. 1 Dairy Alfalfa	22.00
Standard Alfalfa	17.00

Quotations by Nichols-Loomis Company. Following are prices to growers f. o. b. Los Angeles in carload lots; handling and commission must be added to obtain retail prices on new hay:

Tame Oats	20.00@26.00

Blackeyes	4.90

NUTS

California Almond Growers Exchange's prices:

Languedoc	14½
Hard Shell	11

Manchurian walnuts, 17.
Chinese peanuts, fy., 9½.

HAY AND FEED

A. W. Scott Co. says:
Arrivals past week 1,033 tons as compared with 760 tons of the previous week. Demand has also been strong and market closes more active than for some time, with values strongly maintained and with an upward tendency. The continued dry weather and the recent light frosts have increased the present feeding demand for dairy and stock purposes, and the general movement of hay, both out of San Francisco and through the interior, is in greater volume and in much stronger demand. Indications are that demand will continue and prices rule stronger than previous levels. Alfalfa is in fair demand, but with receipts somewhat heavier than the consumption. Heavy arrivals are coming in from Nevada every day and being absorbed both by local demand and for shipping purposes. As practically all the California stocks are in warehouses and not being offered, the foreign hay has moved without difficulty. Change in the weather conditions, however, may start these local stocks almost any time, and the liability of such heavy offerings holds down dealers' ideas as to present price and may cause a depression in the future market. Millfeeds continue slow and dull, with no activity in any particular line and movement light.
We quote today wholesale prices in carload lots as appear from dealers' transfers upon the markets in San Francisco (for prices to consumers, charges of switching, cartage, commission and handling expenses must be added, according to conditions).

Wheat hay No. 1	17.00@19.00
Wheat hay, fair grade	14.00@17.00

ARIZONA GROWERS INTERESTED IN GRAPES

By Fred K. Howard

The meeting of grape growers and prospective growers of the Salt River Valley of Arizona under the auspices of the county agricultual agent at Phoenix, November 16 and 17, brought out many interesting questions regarding the feasibility of growing table and raisin grapes in the Salt River Valley. The meeting took the form of an institute with speakers from the state agricultural college and from the California Associated Raisin Company. The final day's meeting was held at the state experiment station farm near Mesa. Those interested in grape growing in Arizona are very anxious to start their industry on a sound basis and are making every effort to get the best sort of information regarding the proper varieties for their climate and will probably confine the planting to the districts where soil and water conditions give the best promise of quality and quantity production. These matters were emphasized by almost all of the speakers and particularly by the local leaders in the industry.

The state experiment station has been experimenting with early ripening varieties for the past three years, and interest seems to be centering on the planting of Thompson Seedless and Malagas, with some inclination toward Cornichon and Persian 23. The growers feel that with their early season they can successfully compete in the fresh grape market with any of the California districts.

Every effort is being made by the office of the state entomologist to keep Arizona free from the two most dangerous grape insect pests, phylloxera and the grape mealybug. With the present inspection system and the cooperation of farseeing growers they hope to save the industry the enormous expense of controlling these pests. The success of the institute is largely due to the efforts of County Agricultural Agent Heard who plans to make these meetings regular annual affairs in the future.

A state motor vehicle police to patrol the highway is seriously needed, says the highway commission, as well as magistrates who will enforce the law.

RHODES GRASS IN ARIZONA

MUCH valuable information as to Rhodes grass is gathered in a circular of the agricultural experiment station of the University of Arizona, issued in May, 1921. The circular is written by S. P. Clark, assistant agronomist, and deals, of course, particularly with Arizona conditions:

Rhodes grass is a perennial plant having narrow leaves and slender, erect stems. It also produces many prostrate stems which send roots into the soil at every node or joint, thus establishing new plants. These prostrate stems will often grow to be four, six, or even eight feet in length, growing in all directions from the parent plant. Frequently, although poor germination is secured when the seed is planted, these runners will form new plants and thicken up the stand. After the plants are once established no further attention is required as they make a heavy sod and prevent weeds securing a foothold.

Rhodes grass stands drouth fairly well but is unable to survive severe cold. A temperature below 15 degrees Fahrenheit is usually fatal to it.

Soil

It thrives best on a deep, rich loam and does not make a satisfactory growth on dry, sandy soils. Its most promising field of usefulness in this state is on alkaline soils as it will grow and thrive on soils containing very large amounts of alkali. Many of these areas, by the use of Rhodes grass, may be turned into profitable pasture and hay fields. On the university farm near Tucson this grass is making a fine healthy growth where black alkali is so strong that all other crops save Australian saltbush have failed to grow.

Planting

Before planting the ground should be well filled with water, then given thorough preparation. It should be plowed deep, disked and harrowed until a fine, uniform seed bed is secured. The ground should be well graded and leveled so as to eliminate all pockets or depressions where the water will accumulate and high spots that will fail to receive water when the land is irrigated. A fine seed bed is essential and there should be sufficient soil moisture to cause the seed to germinate quickly and to maintain the young plants until they are thoroughly established. The best time to seed is early spring, that is, from the last of March to the first of May, or as soon as danger of severe frost is past. Fall planting may succeed, but there is danger of the young plants winter-killing. The seed is very light, and broadcasting by hand is the usual method of seeding. This should be done on a still day in order to secure an even distribution. It is good policy to sow half the seed one way, then cross seed. This will minimize the chances of having large unplanted spaces.

After the seed is sown it needs but a light covering; a light harrowing or going over with a light plank drag will be sufficient. On light or sandy soils it is a good policy to roll the soil after planting in order to give the seed close contact with the soil particles and help maintain the surface moisture. If there is danger of the surface soil becoming dry before the plants are sufficiently established to withstand flood irrigation the field should be corrugated. This may be done in the following manner:

Make a frame ten feet long and four feet wide. On the under surface nail 2 by 4s, 18 inches or two feet apart. Bevel them to the front end the same as a sled runner. This tool dragged across the field will form shallow furrows down which water may be run. The water will seep through and moisten all the surface. A simpler method is to fasten 2 by 4s, as just described, on the under side of a harrow instead of a frame.

Yields

The returns per acre vary greatly with the type of soil. The richer the soil the greater the returns. Three to six tons per acre is an average yield, but under very favorable conditions it may amount to seven or eight tons per acre. The crop should be harvested as soon as the seed begins to ripen. The hay, being fine stemmed and very leafy, cures easily. It should not be allowed to remain in the field longer than is necessary since the sun will bleach it badly, making inferior hay. The field should be irrigated immediately after each cutting in order to stimulate new growth.

Feed Value

Rhodes grass hay is relished by all classes of livestock and maintains their growth and supplies energy better than most grasses. Although Rhodes grass makes excellent hay its chief value is as a pasture crop. It forms a heavy sod and stands trampling well. The number of stock that it will maintain will vary according to the type of soil and the season. The field may be pastured the year through, but this practice is not recommended. The plants should be given an opportunity to renew their strength by being cropped for hay occasionally.

After a field has been in Rhodes grass for a few days, and perhaps become sod bound, it can be renovated by thorough disking and irrigating. Rhodes grass is very easy to eradicate.

CROP REPORT FOR ARIZONA

That Arizona is closing the crop season with excellent yields of corn, potatoes and grain sorghums, is shown by the crop report just issued by the U. S. bureau of markets and crop estimates in cooperation with the University of Arizona extension service. Conditions have been exceptionally favorable for the harvesting of cotton, the absence of rain and frost permitting the maturing of late bolls. Range grass has cured in excellent condition, which insures an abundance of feed on the desert ranges.

While a large proportion of the Arizona corn crop is not harvested for grain, the equivalent grain yield on the acreage harvested this season is estimated at about 928,000 bushels.

The potato crop is the best for several years, being estimated at 575,000 bushels. The grain sorghum crop matured in excellent condition. The total grain crop is estimated at 1,485,000 bushels compared with 728,000 bushels in 1920.

WEATHER REPORT

6% loans to farmers!

Loans made by this bank may be paid off any time after five years—and the borrower may enjoy the unusual privilege of taking 33 years to repay his loan in installments.
The loans are made under supervision of the Farm Loan Board—a bureau of the United States Treasury.

IMPORTANT FEATURES

1. No unreasonable limitations or special conditions as to how money borrowed shall be used.
2. The mortgage never becomes due. You pay no renewal expenses.
3. Payments may be extended over a period of 33 years.
5. The borrower pays no commission. We loan *direct* to farmers. Loan made up to 50% of appraised value of the land, and 20% of the insurable improvements.
6. Positively no red tape of any kind.
7. The best and broadest type of service ever extended to farmers.

"Only 500 a minute—

and here's what it means to you. 500 revolutions a minute is the speed of the engine that runs the Home Light Plant—a ***low speed.*** It saves wear on moving parts and that's why it costs you practically nothing to maintain. It ***simplifies*** the engine and that's what makes it easy for you to keep your plant going. The dynamo is belted because it should run ***faster*** than the engine.

And that isn't all. There's an extra power pulley on the engine that also runs at ***low speed***—just right for driving your pump, separator, washer or any similar machine, either direct or through a line shaft. And while you're running these machines, your battery is being charged.

It's the famous "Z" engine that drives this plant—mounted right on the same base as the dynamo. This makes a compact unit. The ***condensing radiator*** gives all the advantages of water-cooling—does the trick without tanks, piping or pumps.

To start the plant simply push a button—you don't have to crank it. And it's just as easy to stop it.

All in all, you certainly must admit that this Home Light Plant is just made for ***you***—simple, few parts, easy to run. And you can buy it at a new low price—complete and ready to give you an abundance of light and power. "

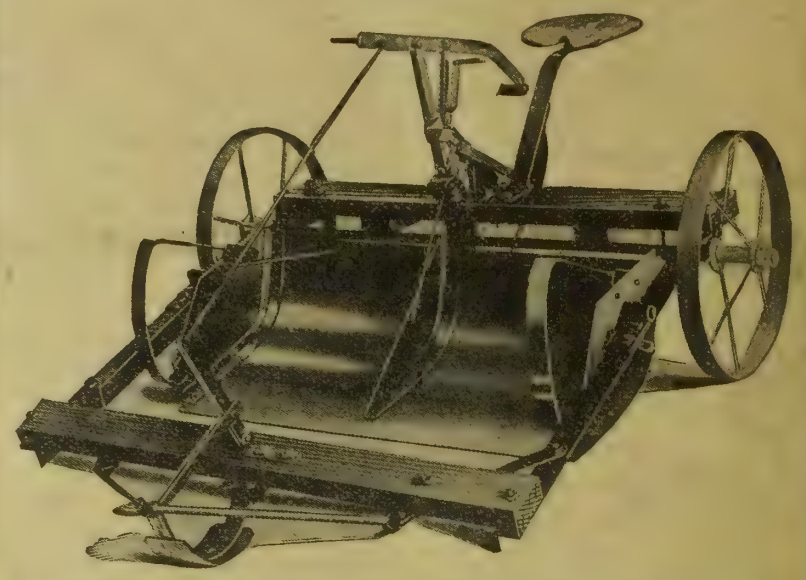
The Miskin Scraper

Is the Best Scraper on Earth

And We Can Prove It

Write for Circulars



The above is a cut of the Famous Miskin Scraper, which in operation, easy draft, greater capacity, and better work has many advantages over the common Fresno and wheel scrapers now on the market and is guaranteed to take twice the dirt per trip with the same horsepower.

Made in 2-horse, 3-horse and 4-horse sizes. Can be operated by small tractors from the tractor seat by the tractor driver.

Send for descriptive circulars, with lowered prices, or ask your dealer to send for one on approval. We pay the freight.

Poultrymen Prosper Through Cooperation

NO STATE in the Union can show such increase in the poultry industry as California. We are producing today practically 100 per cent more of poultry and eggs than we were a decade ago. Almost 80 per cent of our farms report poultry; there are thousands of town lot producers, and, far more important to the welfare of the state, thousands whose entire business is production of poultry and eggs. According to the census there are in California a total of all poultry of 10,811,183. This is against 6,000,000 shown by the 1910 census.

Why? One word answers—COOPERATION.

In no state in the Union have poultrymen cooperated as in California. The cooperation has succeeded not in boosting prices to the consumer, but in distribution and in storage which have enabled poultry people to meet the needs of all markets.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

If among the more than 40,000 Cultivator's weekly circulation any fail to find any article they desire to purchase advertised in the Cultivator's columns, a special request is extended you to let your wants be known to the California Cultivator and we will place you in touch with proper parties.

EDITORIALETTES

The importance of the poultry industry justifies the Cultivator in giving the space accorded it this week. Mrs. Koethen takes a look over the last year's accomplishment and the coming years' promise. Her answers to poultry questions are becoming one of the most popular features of the poultry department. Some of the most valuable suggestions for egg producers are given in quotations from a circular issued by the Poultry Producers of Southern California on page 591. It is an appeal from the people who are most deeply concerned with the marketing of the product of California's poultry ranches. Their entire time is given to the study of the markets, and they have seen where losses have come to them and to their members because of carelessness of the producer. Standardization of fruits, standardization of dairy and poultry products have come because standardization pays, and equally a sure loss is visited upon shipments of eggs which come from the ranches of people who permit dirties or stale eggs to be a part of their delivery of so called extra eggs. It does not pay to advance freight charges on shipments of eggs to points 3000 miles away unless there is absolute certainty as to their quality.

CONSERVE POWER

The League of the Southwest is an open forum. When it convenes at Riverside next Thursday morning there will be present representatives from a half dozen states, many irrigation districts, private and public, municipalities and power companies and interests almost without number. Millions are at stake, and while the league will afford opportunity for discussion of the questions, there can be no definite action other than that secured through the passing of resolutions, but the action there taken or, rather, the resolutions there passed, may have wide influence. Let us hope that the voice of the people will be loud and emphatic.

GROWERS SHIP OWNERS

Under ordinary conditions or, rather, conditions which are entirely fair to producers, we believe in the producer remaining a producer; marketing forces doing the marketing; transportation companies handling the transporting; retailers supplying us with pins and needles—in fact every fellow perfecting himself in his own job and sticking to it.

Bear in mind "under conditions which are entirely fair."

Marketing forces were not fair and it became necessary to enter the marketing field. For nearly a third of a century we have increased in marketing efficiency until we are hoping the producing industry may yet become profitable. England has succeeded with cooperative stores. They may yet come to this country, but as yet they have not been generally successful. A few purchasing agencies have, however.

Now comes transportation—water transportation.

The Fruit Growers Exchange committee consisting of C. S. Whitcomb, A. E. Bennett and R. H. Wilkinson has investigated all angles of water transportation. Now comes the announcement:

"Formation of a $2,000,000 steamship company to operate six refrigerator ships between Los Angeles and Atlantic ports has been almost completed by the water transportation committee of the California Fruit Growers' Exchange. Final arrangements which will lead to operation of the ships within a couple of months are expected to be completed within the next two weeks."

The $2,000,000 pledged will be used for the erection of the precooling plant and dockage facilities at Los Angeles Harbor, trucking equipment, chartering of the six ships from the government, and the securing of adequate docking and storage facilities in Boston, Philadelphia and New York.

In speaking of it Mr. Whitcomb said:

"Our plan provides that the Producers' Steamship Company shall render exactly the same service to shippers that the railways now furnish. The steamship company will send its trucks to take and receipt for the fruit at the door of the packing house, transport it to San Pedro, place it in a precooling plant at the dock and hold it in cool storage aboard ship until unloaded at the eastern market.

"The precooling plant at San Pedro will have a capacity for about 200 cars, and every modern mechanical device for handling the fruit rapidly from dock to ship will be installed."

CALIFORNIA'S WINNING AT INTERNATIONAL

Wire from Prof. Gordon H. True at the Chicago International shows great honors won by California livestock:

"Have won as follows: Heifer (Lula Mayflower, cross-bred heifer) first in class, champion grade, champion yearling, and grand champion of the show. California Standard (Aberdeen-Angus steer) first in class, champion Angus, and reserve champion calf. California Bystander (Aberdeen-Angus steer) first in class. Won first on grade herd. California Perfect Lad (cross-bred Hereford-Angus steer) took second on Hereford specials. Cross-bred wether first, champion, and reserve champion of the show. Southdowns second, third and fifth, first on pen of Southdown. Hampshires first, second and fifth, and first on pen of Hampshires. Grade yearlings third, first on pen of grade yearlings. Rambouillets third and fifth, second on pen of Rambouillets. Shropshires second, and fourth on pen of Shropshires. Hogs Hampshire second, Berkshire fifth."

PEAR INDUSTRY CONVENTION

Pear growers and those interested in pear growing and the pear industry generally held an enthusiastic convention at Berkeley. We have promise of transcripts of some of the talks which are of greatest interest to pear producers, and we hope to make liberal quotations from these later. Regarding some features of the convention President Swett writes:

"Five sessions, averaging attendance of 150 to 200 at each session, showed a real interest; 197 at the banquet featuring pears showed folks weren't afraid of the results. We even had a pear cocktail. Jaffa said it contained 113 calories guaranteed 'kickless.' Reimer's talk was a classic, embodying such careful and masterly research by a man devoted to his subject. We are under great obligations to Mr. Whitcomb for coming away up here; it was good of him.

"Everybody says this pear meeting was a remarkable success. It was different because:

"First, through the Pear Growers, I asked if they wanted a meeting; if so to sign a coupon requesting the committee as their servants to get up a party for them. On the coupon they stated what they wanted discussed, and we followed the growers' requests.

"It was a group all interested in the same kind of a dollar.

"It was an industry—not a growers' convention—canners, dryers, railroad men and horticultural experts were there.

"We tied it up to the University food products laboratories where Cruess is doing such fundamental and wonderful work; and to the students' fruit show. We tried to avoid any topics they could be informed on through the ordinary university or farm advisor channels.

"We plan next year to give one day to the pear industry, one day to the peach and one day to the prune and apricot."

POULTRY COOPERATION

During the last 12 months California has shipped 1000 carloads of eggs to the city of New York. We do not know the exact percentage, but not far from 90 per cent of these eggs were shipped by cooperative organizations. The entire consideration of these cooperators was not simply to dispose of those carloads at longest price but to stabilize a market which was beginning to weaken. Their efforts proved successful and did, as hoped, first secure a market for the eggs sent to the greatest egg consuming center in the world; second, and better, they took from California markets eggs which would have entirely demoralized those markets. But even extensive shipments to far away markets cannot be used exclusively for they will not absorb all that we have to offer; cooperation also aids in upholding the markets by throwing other thousands of carloads into storage.

To the cooperative associations in California—there are only a few—the success of the industry has been due. Former methods of poultry and egg marketing would prove inadequate to meet present day production.

While New York is the largest egg market in the world, as noted, it is not able to handle all of California's surplus, and a representative of one of the state associations is just back from England with suggestions for transporting by way of the Panama canal and marketing in London and other large English centers other hundreds, and possibly thousands, of California produced eggs.

One side of poultry cooperation which is being used to advance the cause is the social. The Poultry Producers of Southern California have been utilizing this force with especial effectiveness during the last few weeks. In this work they have been joined by Market Director Maddox and Deputy Britt of the southern office. Amongst other activities there were banquets at Riverside, Escondido, and Los Angeles. Addresses were made by the market directors, Messrs. Davison, Schofield, Stanley, Brooks and others. There will be a change in the Los Angeles office on January 1. L. E. Brooks, secretary for several years, is retiring and F. R. Williams taking his place.

California Cultivator

Vol. LVII, No. 23 | Los Angeles, December 3, 1921 | One Dollar Yearly

A Poultry Census of the United States

The bureau of the census does not count town lot poultry in its report of the enumeration taken January 1, 1920. It touches only on "poultry on farms in the United States." We are not certain whether California poultrymen, who are specialists, usually buying all their feeds and giving their entire time to the poultry industry, are included in the "farms" of the United States. If not, then California has made a wonderful showing of growth in the poultry industry. Its increase is practically 100 per cent since the census of 1910. We can find no other state in the Union which shows such an increase though we do find some states which show a decrease.

The department of commerce through the bureau of the census announces the following figures from the 1920 census of agriculture for the United States, with comparative figures for 1910:

Poultry on Farms in the United States: 1920 and 1910

	NUMBER		VALUE	
	1920 (Jan. 1)	1910 (Apr. 15)	1920 (Jan. 1)	1910 (Apr. 15)
*All poultry	372,825,264	295,880,190	$373,394,057	$154,663,220
Chickens	359,537,127	280,340,959	349,508,867	140,193,129
Turkeys	3,627,028	3,688,708	12,904,989	6,605,818
Ducks	2,817,624	2,906,525	3,373,966	1,567,164
Geese	2,939,203	4,431,980	5,428,806	3,194,507
Guinea fowls	2,410,421	1,765,031	1,582,313	613,282
Pigeons	1,493,630	2,730,994	537,576	762,374
Ostriches	231	5,361	57,540	1,696,140

*The figures for 1910 include peafowls, pheasants, etc.

The total number of all kinds of poultry on farms on January 1, 1920, amounted to 372,825,264, including 359,537,127 chickens and 13,288,137 other fowls. The total number of fowls on farms on April 15, 1910, was 295,880,190, including 280,340,959 chickens and 15,539,231 other fowls.

Taken at their face value these figures would indicate a marked increase in the number of chickens on farms. As a matter of fact, however, the earlier enumeration of the 1920 census is largely responsible for the greater number of chickens reported. Chick-

(Continued on Page 595.)

Poultry in California---Yesterday and Tomorrow

By Jean A. Koethen

THE poultry industry;—how many of us whose life in the Golden State extends back over 25 years or more can remember when there was no such thing? We kept chickens—that is, some of did—because we had always kept them. We liked to have them running around the place eating up odds and ends of garbage. We liked hunting for nests in strawstacks and mangers. We did not greatly mind if they ranged on our neighbors. Chickens was chickens, that's all. We bought or sold our eggs at two dozen for a quarter in the spring and perhaps 35 cents a dozen in the fall. As recently as 1900 the average citizen had never heard the word "chicken ranch."

There were chicken ranches in California, however, before 1900. In Harrison Weir's Poultry Book, published in 1904, he says: "In the vicinity of Petaluma there is a whole community that makes the production of eggs its only work. It is estimated that about 100,000 hens are kept in the immediate vicinity of Petaluma, and the net profit from these is from $1 to as high as $2.50 each in a year. This town is the most distinctively poultry town in America and its trade is constantly increasing. Here it is that we see to what an extent the trade in eggs may be developed by carefully educating the people to an appreciation of its possibilities."

Two years before Mr. Weir's book was published I. K. Felch, known the country over as the father of poultry culture in the United States, had written in his "Poultry Culture," which seems to have been the first poultry book of any reputation published in the country: "We are not alone in our belief in the magnitude of our faith in the future of this immense interest or industry," and urged that "it is the duty of all men who have the development of this country at heart to encourage the greatest possible production of every commodity that we can produce with profit, and among other industries the poultry and egg business must not be neglected. The farmers must be made to understand that thoroughbred fowls are as much superior to barnyard fowl as the Herefords, Jerseys and Anguses are to the common cattle that roam over our prairies; and when they understand this they will improve their fowls."

It is not easy to fix the date of the awakening of California outside of Petaluma and Sonoma County to the possibilities of the poultry industry. Undoubtedly there was a great awakening between 1900 and 1910. In "California Poultry Culture," published in 1906, Mrs. O. P. Burbridge, editor of the Pacific Fancier, called California the "Poultryman's Paradise," and stated that "California sends over $5,000,000 yearly to the Middle West and Eastern states for market poultry, to say nothing of what is sent the owners of fine breeding plants in the east and Europe," that the demand is increasing all the time, and that the ranches devoted to market poultry and eggs obtain a better average price in California than in any other state in the Union."

The census of 1900 reported 3,047,200 chickens, including guineas, in California and the value of all the poultry in the state as $1,877,489. The census of 1910 reported 5,665,964 chickens, presumably not including guineas, a gain of 85 per cent. Mr. Davison and Mr. Brooks of the Poultry Producers of Southern California estimate the egg production for the state in 1920 at 120,000,000 dozen, selling at an average price of 50 cents.

Poultry Associations

It is impossible to secure exact date as to the organization of poultry associations which began to spring up all over California about 1910. That at Arlington, which was one of the earliest, was organized in 1911. Before that date J. M. Davison, president of the Poultry Producers of Southern California, who was one of the leaders in organizing the Arlington association, says the poultrymen in that district could be counted on the fingers of one hand. This year that association marketed 60,000 dozen eggs with a total valuation of $270,000, and its history is duplicated in a hundred thriving communities all over the state.

With the example of the fruit growers of the state before them poultrymen soon saw that local associations demanded a closer bond of union in a general association, and the Poultry Producers of Southern California was organized in 1916 with headquarters in Los Angeles. Organization of the Poultry Producers of Central California had preceded that in the south. Its headquarters are at San Francisco, and it is still the largest association in the state.

How Many Chickens

The total number of chickens in California is hard to estimate. L. A. Brooks, secretary of the Poultry Producers of Southern California, estimated last May that there were 2,000,000 chickens in Southern California, 8,000,,000 in Central California, 2,000,000 in other districts, making a total of 12,000,000 for the whole state, and his figures are probably more nearly correct than those of the census of 1920 which reports 10,426,648 chickens in the state but does not include backyard flocks and possibly not even commercial flocks, though this does not seem likely. The work 'chickens" which is used in the census report no doubt includes roosters and young stock as well as hens, and as the census is taken in early summer young stock would be in larger proportion than in the fall. It is estimated that there are at least 4,000,000 hens in commercial flocks and probably 2,000,000 more in backyard and farm flocks.

The Backyard Flock

It is a pity the government felt it could not afford to take a census of backyard flocks, for in no branch of the industry has there been a more steady increase. Twenty-five years ago chickens were practically unknown in a city or suburban backyard. Farmers had them, of course, but how could one keep chickens in the city? It was not till Mr. Philo and other enthusiasts demonstrated the possibilities of keeping chickens in small yards or even without any yards at all that the great American public woke up to its opportunity. Now the backyard flock is the rule among middle class householders. Half a dozen hens can be kept in a few square feet of space and will almost keep the family on eggs made from kitchen waste. Many a backlotter has a nice little business in fancy eggs and stock, and any description of the many styles of backlot coops and houses would fill a book. The little family hen has come into her own.

Our Output Today

Some idea of the tremendous growth of commercial poultry keeping may be gained from the report of the Poultry Producers of Southern California for 1920. In the 12 months ending December 31, 4,103,444 dozen eggs were marketed for 710 members at a total valuation of $2,096,450 and 75,000 broilers handled. The membership of the association represents 500,000 hens.

Egg shipments east reached this year a peak never before attained, the central association sending 920 cars to New York and the southern association 120 cars, a total of over 1000 carloads of eggs.

This year the southern association expects to report 5,000,000 dozen eggs handled, for there is easily an increase of 25 per cent since last January, and the central association will probably handle four times as many, making in round numbers 25,000,000 eggs produced by the two associations.

What of Tomorrow

The gain in poultry in California from 1900 to 1910 was 85 per cent; the gain from 1910 to 1920 was 84 per cent, apparently a slight loss but really a remarkable gain when we consider the handicaps under which the industry labored during the war. With those handicaps removed, marketing facilities immensely improved by organization and the opening up of new markets in the east and Europe; with our climate and the fine spirit of leading poultrymen who give their time and effort unstintedly to the improvement of methods, California, now already a leader in the poultry industry, must climb to preeminence. We have climbed steadily, hand over hand sometimes, undaunted by obstacles, undeterred by more than one bad year, visioning as did I. K. Felch the future of this immense industry. If the census report of 1930 does not show a gain of 100 per cent it will be a surprise to all who have followed the remarkable development of poultry work in this great state.

Agricultural News Notes of the Pacific Coast

Northern California

Carload shipment of celery has started from the Antioch section.

The new charter proposal for Alameda County was turned down by the voters.

Cotati, Sonoma County, has established a center of the county farm bureau.

The farmers' public market at San Francsico is handling turkeys on ten per cent commission.

The Northern California Orange and Olive Show was held at Oroville during Thanksgiving week.

Effort to form "Petaluma County" by division of Sonoma has been discouraged by decision of supreme court.

Cinnabar, Sonoma County, has a "meat ring" which purchases whole beeves and distributes meat to members.

Sutter County celebrated on November 30 the completion of the first unit of the Ukiah-Tahoe state highway out of Yuba City.

The chamber of commerce and the farm bureau are cooperating in efforts to secure a fruit and vegetable canning plant for Colusa.

Effort is being made by orchardists to induce the California Prune & Apricot Growers Association to locate a packing plant at Colusa.

The forestry department of the state university will establish station at Santa Cruz in order to make study of second growth redwood.

The San Joaquin County Almond Growers' Association has a membership of 633. It will ship 20 carloads of nuts from the Lodi warehouse.

The new California Canning Peach Growers' Association has been holding very successful meetings in Placer County. A large membership has been enrolled.

Of the 432 hens entering the Sonoma egg laying contest on November 1, 1920, 125 finished the year with records of 200 or more eggs; 18 laid between 250 and 280.

Farm Adviser Harrison of Yuba County, acting with State Market Director Maddox, is listing names of turkey raisers, with number of birds available for holiday market, in effort to get better prices.

State Market Commissioner Maddox is advising turkey raisers that they should receive from 32 to 45 cents at least from their birds and suggesting that they hold back shipments until buyers offer better prices.

In a stockmen's meeting held recently at McArthur, Shasta County, it was suggested that stockmen would approve a shorter deer hunting season for Tehama and Shasta Counties. The 50 stockmen present unanimously agreed.

A survey of reservoir sites on the upper reaches of the Sacramento river, beginning at Red Bluff and extending north, is being made in pursuance of a measure passed by the last legislature in connection with the "Marshall plan."

The Rice Growers' Association of California announces that commencing December 1 the loans made to its members from the funds advanced by the War Finance Corporation on warehouse receipts will be at the rate of six per cent, based upon 90 day notes.

Central California

Citrus fair at Visalia, December 10-17.

Tulare County expects a 20 per cent larger crop of oranges than last year.

Santa Cruz County now has a home demonstration agent in Miss Anne McCormick.

The Livingston plant of the Sun-Maid Growers this year received 600 tons of raisins.

The American Fruitgrowers is planning to build a packing house at Tipton, Tulare County.

The California Wool Growers' Association held its 14th annual convention at Fresno, November 28-29.

Forty counties in California have farm bureau organizations. There are over 600 community centers.

The Milk Producers Association is holding "Realization Meetings" to make known that it is now a paying concern.

Fruitgrowers of Sanger, Fresno County, celebrated with a banquet the close of a satisfactory harvest and shipping season.

Carload shipments of apples from Watsonville are slowing down. To date they are some 400 carloads ahead of last year at the same time.

Topaz Lake in Mono County is now the first storage unit of the Walker River irrigation district, which comprises 150,000 acres of tillable land in that county.

Raisin growers of the San Joaquin Valley will receive, with the final payments now being made by the association, a total for the 1920 crop of over $37,000,000.

California Sun-Maid Growers has made the final pyament for the 1920 crop of Muscats, Thompsons and Sultanas. Malagas and black grapes are yet to be settled for.

Officers of the San Joaquin County farm bureau are: President, S. A. Shearer, Bethany; vice-president, L. K. Marshall, Lodi; secretary-treasurer, Gilbert D. Keitle, Stockton.

The supreme court has affirmed the decision of the superior court on the legality of the organization of the Madera irrigation district, which was attacked by the Miller and Lux interests.

Home department meetings of the San Joaquin County farm bureau will be held at Farmington, December 6; Manteca, 7; Lathrop, 8; Escalon, 9; French Camp, 13; Douglass, 14; Summer Home, 16.

Report of the San Joaquin County Cow Testing Association for October shows highest individual test made by Empress Bergsma DeKol, 91.6 pounds fat. This cow is owned by Chase Bros. of Escalon.

Formal notice has been received from the state water commission of the reopening of the adjudication of the water rights of the Stanislaus river, indicating that the entire question of water rights is to again come up for decision.

Local meetings of the San Joaquin County farm bureau will be held at Douglass, December 6; Lockeford, 12; Ripon, 13; Linden, 14; Summer Home, 15; Escalon, 19; Live Oak (grape pruning demonstration), 20; Bruella, 21; Calla, 23; Lathrop, 27.

Southern California

Southern California Poultry Show at Santa Ana, December 13-17.

Yucaipa Valley in San Bernardino County has hopes of securing a railroad line.

The third annual Orange County citrus institute will be held at Santa Ana, December 8 and 9.

The Carpinteria house of the Santa Barbara Walnut Association has closed the packing season.

A combined poultry and grapefruit show is to be held at Brawley, Imperial Valley, about December 20.

Imperial Valley farm center meetings: Sunset, November 22; Alamo, 24; Central, 24; Acacia, 25.

The Grapefruit Growers' Association of Imperial Valley has organized with J. W. Reed as president.

Ventura County has by far the largest acreage in lima beans of any county in California, over 60,000.

The fire warden of Los Angeles County made 15 arrests this season for responsibility in starting forest fires.

The Victoria Avenue Citrus Association of Riverside last year received 251 carloads of oranges, lemons and grapefruit.

The Farmers' Club of Mound, Ventura County, held its first meeting after the summer vacation, on November 15.

Members of the Ventura Association of the Lima Bean Growers have received second payment of 2 cents on October deliveries.

One of the tractor schools conducted by the state university will be held in Los Angeles County, January 16-21, location to be announced.

The San Dimas Orange Growers Association held its 22nd annual meeting November 12. Shipments the past season amounted to 784 carloads.

Farm bureau members in Imperial Valley made arrangements to ship their turkeys to Los Angeles to be handled on ten per cent basis.

The Imperial Valley fair district has been formally organized with M. V. Oakley, president; G. F. Sale of Imperial, secretary, and V. V. Scott, treasurer.

At the annual meeting of the San Bernardino County Fruit Exchange J. T. Milliken of Highgrove was elected president, John I. Cumming, Rialto, secretary-manager.

Horticultural Commissioner Coy of San Bernardino County is reminding citrus growers and shippers that standardization regulations in regard to maturity before picking will be rigidly enforced.

The Chamber of Commerce of Northern San Diego County held its autumn outdoor picnic at Live Oak Park, Fallbrook, November 12. This was a road meeting to consider means of securing paving of the inland highway by way of Escondido.

The California Walnut Growers Association last week shipped 1,000,000 pounds of nuts by two steamships from Los Angeles Harbor. The railroads have now dropped freight rates on walnuts from $2.33 to $1.75 per hundred to points north and west of the Ohio river.

The Coast and General

The alfalfa weevil has destroyed much bee pasture in Idaho.

Yakima, Washington, will hold its corn and potato show December 10.

Southern Arizona and Northern Mexico have had killing frosts in all low lands.

The western mountain states are shipping out honey rapidly; little is left in beekeepers' hands.

The annual meeting of the Washington State Horticultural Association will be held at Spokane December 12-15.

Yakima County, Washington, will ship out over a million pounds of honey. Beekeepers report heavy losses from poison sprays.

British Columbia and Washington are planning to cooperate in protecting forests for two miles on either side of the international boundary.

Secretary Villareal of Agriculture and Development of Mexico recently placed the cornerstone of the agricultural school building at Leon, Guanajuato.

Approximately 250,000 boxes of Hood River apples will move direct to England this season by boats from Portland. Already some 75,000 boxes have been shipped.

The agency of the department of agriculture and development at Guadalajara is to be stocked with 18 carloads of plows, sowers, cultivators, mowing machines.

There was a large showing of Angora and milk goats at the Pacific International at Portland. The Oregon Mohair Association offered $1000 in four champion prizes.

Clackamas County, Oregon, has seven herds of federal accredited Jerseys, six of Guernseys, one Holstein and one Shorthorn, the largest number of any county in the state.

Florida estimates a 25 per cent reduction in her tangerine crop from last year's yield, and growers are holding back their holiday fruit expecting to get around $4 per field box on the tree.

A two days' grape institute was held at Phoenix and the Mesa experiment station, November 16 and 17. Arizona growers are much interested in planting Thompson Seedless and Malagas for early shipment.

The annual convention of the Farmers' Union of Washington and Northern Idaho will be held at Spokane December 13. President Barrett of the National Farmers' Union will be one of the speakers.

The Whatcom County branch of the Washington State Cooperative Egg and Poultry Association is reported as exporting to Vancouver, B. C., 50 to 75 cases of eggs per day. Stations for the association are maintained at Lynden and Bellingham. A car of standards is reported as being shipped to New York each week.

As a result of the trouble this season in getting experienced packing house help, apple growers and packers of eastern Washington expect to bring up at the next grade and pack conference the matter of having grading taught in the public schools. The Y. M. C. A. has, in past years, conducted such a school to help the Wenatchee, Spokane and Yakima shippers, but this has not met the demand.

The California Livestock Auction Plan and Others

By R. P. Royce

AS A GENERAL proposition the disposal of registered livestock is regarded as the most difficult feature of the industry, and since time immemorial the efforts of men engaged in breeding livestock have been directed toward a satisfactory solution of the problem. As a result two plans of selling have come into general practice, namely, disposition at private treaty and at public auction. The fundamental difference between the two methods is that under private treaty the seller sets the price, which may or may not be accepted by the buyer, while at public auction the advantage is with the buyer.

In a way, California has been fortunate in the fact that as a state we have been a bit backward in the purebred livestock industry. If we must acknowledge that we have comparatively small numbers of registered livestock we can at the same time count ourselves fortunate in being able to profit by the mistakes of our sister states in the conduct of our livestock affairs. It is not intended to draw a blanket indictment against all other states or aganist the purebred industry as a whole. Be it said to the eternal credit of the industry at large, and the personnel of the men engaged, that no other industry—and certainly none in which the element of personal integrity is fundamental—has been maintained and developed to a high place, with so few cases of business defection. Of necessity the industry is such that most of the transactions are consummated in an intimately open manner and under the searching and pitiless spotlight of publicity. Notwithstanding those facts, it is common knowledge that in the older sections of this country many practices have developed and been fastened on the industry that, to say the least, are subject to more or less criticism.

Without going into too minute details, the more flagrant practices may be enumerated as follows:

1. "Wash sales," i. e., selling animals at fictitious prices.

2. Extensive use of personal notes in settlement for purchases.

3. Domination of breeders by a certain class of auctioneers, newspaper fieldmen and publishers of farm and livestock papers.

4. The lack of a uniform plan of selling as regards the various guarantees.

5. The lack of satisfactory machinery for the adjustment of disputes, especially in safeguarding the beginner.

The first mentoned abuse probably has been the source of more criticism from the public than all others. That it has been worked many times is admitted. The common modus operandi of a wash sale is about as follows: The owner of an animal may enter into an agreement to sell said animal for a certain amount, provided the purchaser will agree to report the price at a much higher figure. Or, again, a seller about to hold a public sale will catalog a certain animal and may sell the animal before the sale at private treaty for a comparatively low price with the understanding that the animal will be sent through the ring and bid up to a high figure. In other cases the man holding a sale may make arrangements with some friend to attend the auction for the sole purpose of bidding up to a certain point on different cataloged lots in the hope that in the process some "sucker" will snatch the bait and pay more than the animal would normally sell for under legitimate ringside competition. Another form of wash sales consists of an arrangement between seller and buyer wherein the latter pays a modest sum in cash and gives his personal note for the balance with the understanding that the seller will reciprocate to the extent of the alleged purchase when the second man holds a sale. The notes then balance.

The idea back of such transaction is usually that sensational prices make "good" advertising for both buyer and seller. Were it not for the fact that such deals tend to establish fictitious values in the minds of the uninitiated, the assininity of the business would be laughable, for obviously no one is hurt and few are fooled. Nine times out of ten such deals cannot be kept secret from the rank and file of honest breeders and in the end react only on the participants.

The practical operation of evil number two is obvious solely as a business proposition. Men offered extensive personal credit are very apt to overbuy and when the practice is general and "pay day" come around it places the business on a very flimsy basis. In this respect the registered livestock business is not different from many other lines of business. Indeed, our whole economic trouble of the present is due primarliy to an overexpansion of credit.

Evil number three is a real evil and has been responsible for many of the failures of breeders. Deplorable as it is, it is nevertheless a fact that in the older sections there has developed a clique of auctioneers and fieldmen, who, aided and abetted by certain papers, have fastened themselves upon the purebred livestock business to such an extent that beside them the old time gangs of highbinders were highly desirable citizens. For the most part the three work together on the highly erroneous assumption that they are vital factors in the business of producing and selling livestock. They foist themselves on the new man anxious to get ahead and declare that they can put him across provided he will follow their directions. These "directions" usually consist of establishing the idea that the livestock business is a highly complicated affair, especially the selling end—and that it is given to but few to understand and master the devious ways leading to success. They rightly argue that publicity is essential, but they are not content with a reasonable advertising appropriation based on what one's business can profitably stand. On the contrary, they attempt, and in all too many cases exact all that the traffic will bear and invariably insist that such publicity be handled by these alleged "expert" fieldmen, many whose stock in trade is nothing more than a monumental amount of nerve and the morals of a second story worker. These men often bleed the breeder to the point of whiteness—even going so far as to threaten the success of a seller by exerting their influence to keep the public away from his sale or farm. The situation in the Middle West reached the point where a man about to hold a sale was pounced upon by fieldmen of a half dozen or more papers and literally sandbagged into spending vastly more for publicity than his offering justified.

Working in close harmony with some of these fieldmen are certain auctioneers who pose as authorities on one or more breeds of livestock and who set up the claim of possessing marked sales ability and are therefore in a position to render most valuable service—for a price, of course, said price varying with the times. Half these "birds"—and birds they are, vultures, in fact—are ignorant to the point of astonishment, and had a kindly Providence not endowed them with a bull-like bellow and a set of leather lungs, they would have difficulty making a living digging ditches.

Naturally a breeder selling under such conditions piles up a selling cost that is entirely excessive and which in the end often is the underlying cause of many a man's failure in the business.

The reader is not to understand that all fieldmen and all auctoneers are of that caliber. Throughout the country are many men—fieldmen and auctioneers—who represent extremely high types of men, who have real ability and because of their sincere purpose and honesty hold the respect of all. Such men have been and are vital cogs in the livestock business.

Number four is rather more an unfortunate situation than a real evil. Under existing selling methods in general vogue each man makes his own selling plans and writes his own warranties. Common practice has largely been responsible for the development of a general plan, but there has never been a widespread or concerted effort to establish a uniform plan. The general scheme of selling as it is commonly operated, except in certain association sales, has not been such that any machinery, aside from the courts, has been provided to adjust claims and disputes between buyer and seller. Another common evil in the purebred livestock business has been the difficulty buyers often experienced in getting transfers and pedigrees promptly from the seller. Such details are nearly always forthcoming in time, but the delay causes much annoyance. Still another feature of Eastern sales that little reason exists for is the tendency to stage the event along lines of a three ring circus, with the auctioneer in the role of ringmaster and the various ring assistants doing the clown work all to the tune of a lot of noise and hullabaloo. Surely there is no real reason for such methods when an auction sale is or should be nothing more than a common business transaction.

With full knowledge of the above features of the auction business, a number of California breeders, about the time the public sale developed in this state, gave serious thought to the problem of selling and set about to see if such practices could not be headed off in California—or at least minimized. Finally a plan was worked out and put in operation in the fall of 1916. That plan, its operation and the results to date will be described in the next issue.

SELLING OF PURE BRED LIVESTOCK

The year just drawing to a close has been one of the most trying periods recorded in American agriculture. With few exceptions the products of the ranch and farm have been forced to low price levels. The livestock industry has faced depression along with other agricultural commodities, but it can be definitely stated that this industry has been able to weather the storm in an easier fashion than allied lines. That very fact is further proof that livestock is the safety valve of agriculture. In good years livestock usually furnishes a profit in keeping with conditions, and in the lean years crops can invariably be marketed through livestock to the best advantage. In normal times good livestock of any sort, when handled without attempts at speculation, furnishes a satisfactory and stable outlet for crops of all kinds. In short, year in and year out there is no safer, more profitable business in agriculture than the production of well bred livestock. Because the California Cultivator is more convinced than ever that livestock farming must, and eventually will, occupy a larger place in the operating plans of California ranchers, the opportunity is taken to again reassert our faith in this fundamental industry and to offer assurance of our readiness at all times to aid in whatever way we can.

The California Cultivator has taken high pleasure in the friendly and substantial support accorded it by the livestock fraternity. This support has made it possible for this paper to occupy the leading place among western papers, a fact that, we take it, is evidence of appreciation of the policy of this journal. We do not assert for the moment that we take undue credit to ourselves for the splendid development the industry has undergone the last few years. We have simply aided as we could the individual and cooperative efforts of the breeders of California. We have at all times proceeded on the theory that California breeders, as a whole, are entirely capable of directing their own affairs, and we have been especially pleased to know that the business is on a decidedly better basis in this state than elsewhere. True, pure bred values have receded somewhat from the peak point of two years ago, but the bottom has in no instance dropped out, as has been true in the older sections, and at the present time it can be truthfully said, and easily demonstrated, that California breeders are in an uncommonly fortunate circumstances as compared to the breeders in other sections.

That such a condition exists is due, we believe, to the advanced methods of selling adopted by California breeders. Profiting by the mistakes of older sections and following in principle the general trail of cooperative enterprise blazed by California fruit growers, a system of selling livestock has been devised, unlike that followed in any other state. That the plan has proven successful is indicated by the general adoption of the method; the range of values registered and the approval vouchsafed the plan by eastern men who have taken pains to inquire into the operation.

Generally speaking, the plan has been indorsed by practically every agency within the state. But for several years there has been a constant effort made by a San Francisco agricultural journal to undermine and destroy the plan. Success has in no case attended these malicious efforts at destruction, but we believe the time has arrvied to inform the livestock public of California as to the more intimate operations of the California plan and the reasons for the constant effort being made to destroy it. This we hope to be able to do in this and subsequent issues.

This Month in the Vegetable Garden

Southern California

By D. F. Reichard

FROM the farmer's standpoint we would say it looks as though we might have a dry winter, but the winter is young and it is possible that before this month is over we may be wishing for sunshine. The vegetable grower ordinarily does not have to wait for rain because he is so situated that he can have all the water he wants when he needs it. Should it not rain during December it would be a wise plan to arrange to give the garden a thorough soaking before the first of the year.

The thing to attend to the first of this month is to get everything cleaned up if not already done. Get any crops that are matured under shelter for future use. We refer to squash, pumpkins, dry beans, corn, peppers, sweet potatoes and the like.

When the ground is cleaned up and the refuse either burned or put on the compost pile, it is a fine plan to scatter over the plot several inches of stable or dairy manure to be worked into the soil either by leaching or by turning it under to decay and incorporate itself with the soil. If your land is heavy use coarse manures and apply gypsum at the rate of 100 pounds to 1000 square feet on lighter soils, unless they are inclined to be sour, then use lesser quantities of gypsum and manures of more concentrated form.

The gardens where hardy winter vegetables are growing, even though cultivation has been faithfully kept up, will need irrigation to keep the young stuff in good growth. The cool weather retards plant growth materially so it is necessary to encourage them as much as possible with fertilizers and water.

Plant any of the hardier vegetables the latter part of this month for successive crops, such as beets, carrots, radish, turnip, spinach, onions, peas, lettuce and sets of cabbage, cauliflower and kale. In protected locations early potatoes may be put in. Start seeds of early tomatoes, peppers and egg plant in hot beds for plants to be set out during February and March.

Prune all trees and shrubbery, thin out and prune back all bush berries and thoroughly spray for control of fungous disease with lime-sulphur solution or Bordeaux mixture.

Look out for gophers and squirrels. Trap them if possible; if not get after them with poison or gas—get rid of them. Now is the time to do it, before the new crop comes on.

Northern California

By A. R. Gould

RECENT rains have been very helpful to our garden operations and will make the work of preparation easier. Right now is the time to get every plot in good order for the next season's planting. Refuse should have been cleared from the plots and they should be trenched deeply and manured. Sour soils should be limed. Seeds may be ordered this month, and when sowing adopt the rotational system, but to do this you should know what the plots were used for last season. The wise gardener has this valuable knowledge in his notebook, also yields, etc. Use plenty of manure on poor soils; it pays every time. Where farmyard manure is unobtainable use bone meal or dried blood. Keep the cultivator or hoe busy through the lines of crops sown recently.

Beets

Varieties sown last month should be carefully thinned to six or eight inches apart. If you failed to sow last month as advised, sow Early Egyptian and Detroit Dark Red.

Lettuce

Thin out to six inches apart Los Angeles and Paris Cos sown last month.

Radish

These delight in a rich soil, and winter varieties such as Rose Winter, Black Spanish and White Winter may be sown in rows 18 inches apart. Sow the seed thinly.

Onions

This is a very important crop and requires a rich soil and careful cultivation during the growing season. Early varieties may still be sown, such as Early Pearl, Red Bermuda and White Bermuda. Towards the end of the month the main crop varieties may also be sown. Standard varieties are Ailsa Craig, Australian Brown and Prizetaker. Southport Red Globe is also of mild flavor and a good keeper. This plot should be well prepared and the surface well pulverized before sowing. These should be sown in rows two feet apart to allow for cultivating with the wheel cultivator. Onion sets or miniature onions may still be planted for early crop.

Turnips and Kohlrabi

Both seasonable crops and may be sown in rows about 18 inches apart in fairly rich soil. They require plenty of moisture and this will make them sweet and tender. Early Snowball and White Flat Dutch are the best turnips, while Early White kohlrabi is excellent. The tops may also be used as a vegetable.

Spinach

An excellent spring crop. Seeds of Bloomsdale Savoy and New Zealand varieties will furnish a supply for some time, as it may be cut constantly. Sow in rows 18 to 20 inches apart.

Peas

By sowing at intervals of a few weeks a succession may be secured. The soil must not be too heavy and should be fairly rich. There are a number of varieties, tall and dwarf, and the last named are most generally grown as they need little support, and when grown as a commercial proposition this is quite an item. However, for the home garden a few of the tall growing types may be grown, such as Telephone, having pods of large size, and Thos. Laxton. They should be sown in rows at least three feet apart, and wire or bamboo stakes may be used for support. The dwarf varieties to sow now are Little Marvel, Premium Gem and American Wonder. Carter's Daisy is one of the newer varieties and bears large, handsome pods. Improved Stratagem is another dwarf variety of merit. Dwarf types may be sown in rows two and a half feet apart. Birds are usually very fond of the young shoots as they show through the ground, but dusting

RUNNING WATER

Makes Country Life Attractive

All that many country homes need to be complete is running water.

One of the greatest drudgeries of country life is the carrying of water

With a Dayton electric driven water system you can have running water in your bathroom, laundry, kitchen, dairy, barns—or anywhere you want it.

Do away with the drudgery of carrying water. Have a modern, up-to-date home that you will enjoy living in.

Ask your dealer about the Dayton. If he doesn't handle the Dayton, write us for complete Literuature.

with arsenate of lead will act as a preventive.

Asparagus and Rhubarb

The ground should be dug and liberally manured before planting both these crops, as they are very gross feeders, and are really profitable to grow. Plant strong crowns in trenches at least six inches below the level of the bed and the trenches should be three feet apart. Best varieties of asparagus are Palmetto and Conover's Colossal. Varieties of rhubarb are Myatt's Victoria and Crimson Winter. Beds of these established last year should be top-dressed with good farmyard manure, the surface being well dug.

Parsnips

Thin out those sown last month as soon as the seedlings are an inch high, leaving the plants six inches apart.

Berries

Strawberries, raspberries, blackberries and loganberries may all be planted except in the extreme north where the ground will be too cold. The plots must be well trenched with manure and well prepared. Strawberries should be planted on ridges two feet apart. The best varieties are Improved Everbearing, Marshall, Gold Dollar and Banner. Good varieties of raspberries are Cuthbert, St. Regis and La France; of blackberries, Mammoth and Himalaya Giant. Blackberries and loganberries may be planted along the fence or boundary line.

Southern Arizona

By M. E. Bemis

BEETS, carrots, lettuce, parsley, parsnips, peas, radishes, spinach and turnips may be planted in December. The following plants may be put out: cauliflower, cabbage, strawberries. Germination of seeds may be more satisfactory than in the early plantings. During the early fall months such seeds as beets and lettuce are sometimes irregular in germination. Later plantings usually show a very much larger percentage of plants. Radishes, turnips, mustard and sometimes beets are easier to make germinate than some other vegetables. Liberal use of seeds under irrigation conditions is advisable. Notwithstanding advantages of irrigated gardens, we have to admit that germination is one of the serious problems. In planting at this season of the year it is well to remember a little kale and Swiss chard for the chickens.

Some who have had considerable experience with the strawberry plants put out at this season of the year say they will do just as well or better than earlier or later plantings. The well known Arizona Everbearing has proved as desirable and probably has more friends than any other variety known here. A sandy, loamy soil, if well fertilized so that there is humus to lighten it produces well, and this type of soils is stronger in fertility than lighter soils. The strawberry bed should be ridged, and for horse cultivation the rows should be 30 to 36 inches apart and ridges six to eight inches high from the bottow of furrows, with plants 12 to 14 inches apart on the sides of the ridges. Only strong young plants should be used and these should be set a little deeper than they grew in the soil from which they were taken, although not deep enough to cover the crowns. The Blue Ribbon and Texas, also the Lady Thompson, do well.

In cool weather growth of plants is slow but by cultivation a moderate root growth is induced and earlier maturity hastened.

Garden vegetables as well as fruit have been high this past year, and the prospect now is that they will bring good prices the coming year. The farmer who has depended upon his general farm crops bringing enough to pay for an abundance of vegetables and fruit or, to put it another way, the farmer who has figured that he could not afford the time taken from his general farm work to care for a garden, has been out of luck. He has paid dearly for his economy of time—or done without the vegetables. December is none too early to make a resolution to do better this coming year.

A frost warning station will be established by the weather bureau at San Bernardino.

This Month in the Ornamental Garden

Northern California

By A. R. Gould

PLANS should now be laid for the season's work. Soil preparation is very important and manure should be applied to all poor soils. Much trouble in gardens is due to lack of fertilizer. Choice flowers grow on rich soil and often in abundance so that you will accomplish much by getting your garden into shape this month.

It is still bulb planting time. Hyacinths and Darwin tulips may be put in now and even daffodils, Emperor, King Alfred and Empress. Tulips are very effective grouped in solid colors among the shrubbery and should be planted 4 inches deep. Hyacinths may be massed in beds, and these last in flower a considerable time, flowering before the tulips.

Lawns should be given attention also this month and preparation should be made for putting in new lawns. The old turf should be well spaded under and manure applied which should be well decayed. Sheep or cow manure is excellent.

Annuals For Spring

Certain hardy annuals will provide early flowers if planted now. Snapdragons and nemophila may be sown where they are to flower, also phacelia and eschscholtzia, godetia, stock and clarkia in variety may be sown in the seed bed and transplanted.

Propagation

Cuttings of privet, euonymus, lonicera nitida and hydrangea may be inserted in sandy soil in a fairly warm border. Keep fairly moist.

Sweet Peas

The winter flowering types should be making strong growth, and aphis may be giving trouble, but these can be destroyed with "Black Leaf 40." Keep the rows well cultivated and towards the end of the month an application of liquid manure should be given. A further sowing may be made now for succession.

Dahlias

Tubers ere this should have been dug and stored. New varieties should be selected and an order placed for the best now. There is an endless number of varieties on the market.

Pansies and Violas

These are very popular flowers and should be planted out at once if an early spring display is desired.

The Perennial Border

This should be well cleaned and all dead stalks removed. Large clumps may be dug up and divided of all such as aster, iris, canna, chrysanthemum, geum, aquilegia, Oriental poppy, delphinium, helianthus and Sweet William.

Japanese Iris

These lovely iris delight in a damp situation and may be secured in a beautiful range of colors including double white, French gray, azure blue, deep purple, lilac and lavender. Plant near a pool.

The Madonna Lily

This beautiful lily flowers in late spring and is well worthy of a place in your garden. Planted near the stately delphiniums it will make a beautiful combination. It is fairly easy to grow and should be planted without delay. Place in groups of three or five bulbs at least six inches deep in fairly rich soil.

Roses

Roses may be pruned and cuttings inserted for propagation. All beds should be dug thoroughly and manured. Climbing roses will need tying in and all dead wood should be removed.

Planting Calendars for Arizona and Southern California next week.

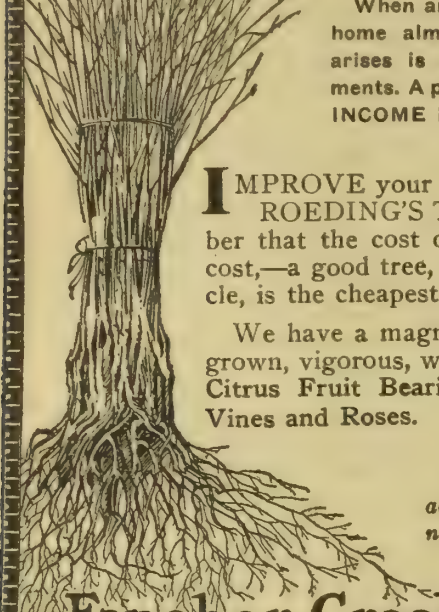
Roeding's True Trees



When anyone is looking for a ranch home almost the first question that arises is the nature of the improvements. A place with a good ORCHARD INCOME is certain to sell first.

IMPROVE your vacant land by planting ROEDING'S TRUE TREES. Remember that the cost of a tree is not the only cost,—a good tree, like any other good article, is the cheapest in the long run.

We have a magnificent stock of properly grown, vigorous, well rooted **Deciduous** and **Citrus Fruit Bearing Trees, Ornamentals,** Vines and Roses.

Let us have your name and address and we will mail you new price list when printed.

Citrus Fruit Shipments Increasing

E. E. Kaufman, agricultural statistician of the California cooperative crop reporting service has compiled a table which reveals some very striking things in the growth of the citrus industry. The season of 1916-17 produced the greatest crop of oranges the state has ever known unless it be 1921-22, which is not yet recorded. The prediction for this season is 22,000,000 boxes.

Standards for California Certified Seed Potatoes

IT IS understood that potatoes for seed certification should first conform to the general standards governing "U. S. No. 1 market stock." This is interpreted as being practically free from dirt or other foreign matter, frost injury, second growth, growth cracks, cuts, bruises, or other damages caused by diseases, insects or mechanical means, with no more than a three per cent variation by weight from any of the above details. It is also recommended that certified seed be marketed in new sacks or containers.

Size

The seed size standard shall be from two to twelve ounces for long varieties and two to ten ounces for round varieties, with a variation tolerance of five per cent by weight.

Varietal Purity

A rigid adherence to trueness to name is required. Since the practice of renaming old varieties or changing the names of named varieties through ignorance or with malicious intention to defraud is detrimental to the potato industry, a standard on nomenclature and the use of the "Group Classification and Varietal Description of Some American Potatoes," by Prof. William Stuart of the United States department of agriculture, is adopted.

Pests and Diseases

No potatoes shall be certified that show by inspection on vine or tuber the presence of the diseases known as black wart (Chrysophlyctis endobiotica Schilb.), powdery scab (Spongospora subterranea [Wallr.] Johns), and violet rhizoctonia (Rhizoctonia crocorum [Pers.] D. C.), and the pests, eelworm (Heterodera radicicola [Greef.] Mul.), and potato tuber moth (Phthorimoea operculella Zeller).

Other Infections

Scab. No potatoes shall be certified which show upon the tuber at final inspection more than five per cent scab (Actinomyces scabies Thax. [Güssow]), with no deep scab pustules permissible. Rhizoctonia (black scurf) (Corticium vagum solani Burt.). More than 12 per cent shall disqualify and no scurf spot larger than one-eighth inch in diameter shall be permitted.

Vascular Infection

Not to exceed five per cent of the tubers, as determined by transverse sections of stem end of tuber in the final tuber inspection shall be permitted. Vascular infection shall be interpreted as meaning wilt diseases as Fusarium oxysporum (Schlecht), Verticillium albo-atrum (Reinke and Berth). Bacillus phytophthorus (Appel et al.). Late blight (Phytophthora infestans [Mont.] de Bary.). Not to exceed two per cent of the tubers infected with late blight rot spots, and no spot to exceed one-half of an inch.

Vine Inspections

Inspection of potatoes is not only necessary after the crop is harvested, but also during the growing season to determine trueness to type and variety, and freedom from disease. This shall be accomplished by an inspection of the potato plants in the field at blooming time, and again just prior to maturity of the plant.

Bloom Time Inspection

Variety: More than five per cent varietal mixture at this inspection shall disqualify for certification. Furthermore, a variation in type of plants in excess of 10 per cent, indicating degenerate or inferior strains of a variety shall disqualify for certification.

Diseases: More than 10 per cent of the plants at this inspection affected by the following diseases, or more than five per cent affected by any one of the following groups of diseases shall disqualify the field for certification:

Well defined "curly dwarf," "leaf-roll," "mosaic," or other inherited weaknesses, combined.

"Wilt" diseases and "blackleg" combined.

Rhizoctonia (black scurf).

Immediately following the bloom time inspection all diseased or objectionable plants must be rogued under the supervision of the inspector.

Second Plant Inspection

At this inspection the tolerances governing certification shall be: Not to exceed five per cent of mosaic, curly drawf, leaf roll and other inherited weaknesses; not to exceed two per cent of diseased plants from any one of the following diseases: Wilt, blackleg and rhizoctonia, nor a total of four per cent of diseased plants from these three causes. Roguing of the field must again follow the second plant inspection. If 10 per cent or more of the vines show serious infection of late blight the field shall be disqualified for certification. The uniformity and quality of the product as seed shall be determined at the second inspection, at which time not to exceed five per cent of the hills shall each weigh less than 30 per cent of the average 100 consecutive hills.

Final Tuber Inspection

This inspection shall be after harvest and after final grading for the seed market and shall conform to the conditions as hereinbefore specified.

The Certification Tag

There shall be attached to each bag or container of certified seed a certification tag, stating thereon that the package contains certified seed potatoes, also giving name and address of the grower, the variety of the potatoes and the year grown.

THE LAND O' PICKLES

By Ernest Braunton

COMPTON, in Los Angeles County, is the headquarters for cucumber pickles in the south end of the state. There are located two pickle factories so that growers find a home market for their entire product. On the lower lands toward the coast too much alkali in the soil divides the cucumber lands from those given over to sugar beets, for cucumbers are not tolerant of much salt until after they are picked.

While earlier and later plantings are made for the general market, "cukes" for pickling are planted from May 1 to June 15. About 75 per cent of those grown are known as Chicago Pickling, a variety introduced by a large pickling concern. A few grow Nichols' Medium Green and other varieties. For the general vegetable market Klondike is the leading cucumber.

The seed is drilled in rows five feet apart. Some plant on ridges, some on the flat. The plants are first thinned to about a foot apart, to see how the crop grows. Later they are thinned to about three feet apart and allowed to mature. Instead of ridging growers who plant on the flat plow toward the row only so that finally vines are on broad ridges. They are so maintained, for cucumbers must be kept out of the irrigation furrows.

After planting in damp, smoothed soil the crop is irrigated at about one, two and three months, when the picking commences. After this the irrigations are frequent, some growers running the water three times a week until toward the end of the season. Such cultivation is practiced as this saturated condition of the soil will allow. Picking, in the fullness of the season, is done every other day if the crop is a good one. The harvest season runs about 60 days and normally the crop is from 7 to 10 tons an acre.

This year proved a very poor season, but the 1920 crop was a booster and some growers netted $400 an acre. The Compton acreage last year totaled about 200. The picklers prefer the cukes small, an inch to an inch and a half. Of course, the growers would like to have them larger, but the smaller size commands the highest price. The next size runs to three and a half inches, and the third, or largest, size to five inches. One grower stated he sold his crop in two sizes, one to three and a half inches, for which he received $54 a ton, and the remainder, from three and a half to five inches, for which he received $20 a ton.

Growers in the Van Nuys-Zelzah section of the San Fernando Valley are going to plant more extensively to pickling cucumbers this year, and a large pickle works has agreed to buy the entire crop at prices agreed upon previous to planting and to build a pickle factory if the growers will get signers to an agreement to plant a total of 100 or more acres. This agreement is now being circulated and those most active in the movement believe the necessary acreage will be secured.

COST OF GROWING BEETS

Ventura County farm bureau has a sugar beet committee and it has sent out questionnaire as to costs of growing. From the answers received the members report:

We, the undersigned committee, beet growers' department of the farm bureau, submit the following report:

Average cost of production tabulated from the returned questionnaire of 50 growers:

Work.	Per Acre.
Fall plowing	$ 4.86
Seed and preparing seed bed	8.96
Planting	.80
Rolling and cultivating	2.72
Thinning and hoeing	9.54
Plowing out	5.02
Topping	8.44
Hauling	6.77
Taxes	10.32
Total cost per acre	$57.53
Average tons per acre	9.02
Average per cent sugar	18.4
Total average receipts, acre	58.26
Net profit, per acre	$ .73
Gross factory receipts per acre, less amount paid rancher	$91.11

Signed by the committee: John R. Powers, Stanley R. Pidduck, Frank Eastwood, Walter Rowe, John F. Petit, Otis Snow, E. G. Laubacher, Earl Hart, Peter Hartveld, Albert Petit.

WINTER POTATOES

The late crop of potatoes in the San Gabriel-El Monte section of Los Angeles County will be lighter than usual and the potatoes smaller; still, a paying crop. Last year the first frost that injured the tops came on December 8; this year, November 19. By that much is the crop retarded in maturing. In both years some green leaves were left to function, and this foliage activity may be prolonged by favorable weather. The stalks are not injured and of course will send down much starch into the tubers unless soon frozen. Some potatoes in this district were planted a little late and the frost caught immature tops. In these fields the crop will be lighter and the potatoes smaller than the average for that section.

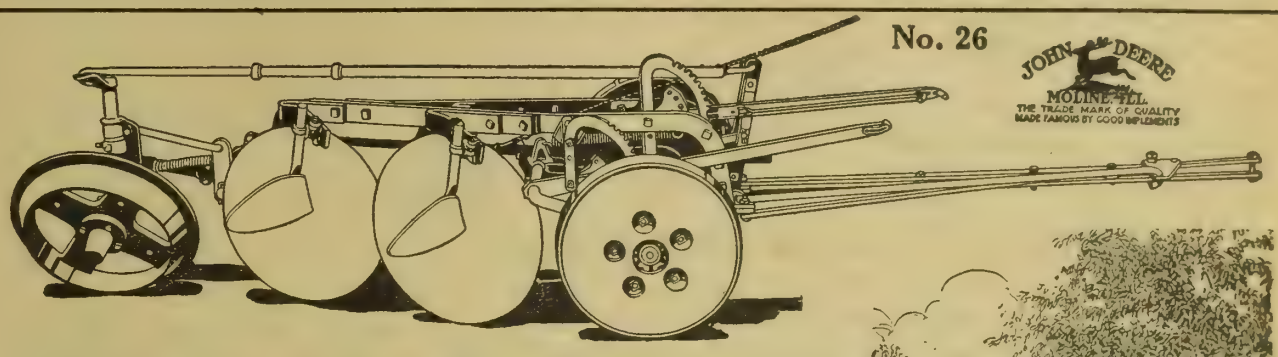
A visit to the Pasadena sewer farm lands uncovered the information that the McSweeny interests will "pull out" of that location and enlarge upon their acreage in the Temecula district of San Diego County. Hereafter they will confine their activities more closely to the production of certified seed potatoes in which it is conceded Temecula has no superior on the Coast. Except for trial plats the McSweeny plantings are all of Temecula seed. That grown there has produced the heaviest and best crops. The reslutant crop, grown on the Pasadena sewer farm lands, was the next year taken back to Temecula for trial, in part, and some replanted on the sewer farm. In neither location did the sewer farm seed measure in production up to the Temecula seed. After years of this experimental interchange, with similar results in the San Fernando Valley, Shafter and Weed Patch sections of Kern County, and elsewhere, E. D. McSweeny says: "It is Temecula for me." He thinks differences in climate the most important factors affecting seed potatoes.

Estimates of New Mexico corn crop this season total something over 7,000,000 bushels.

HE WILL NEXT TIME

"One of the most expensive mistakes I ever made was in trying to finish up the day's work with my tractor without getting a new supply of oil. I was nearly done with the day's work and had less than a round to finish. I didn't want to stop to get a new supply of oil and I just kept on driving. From that time on I had trouble with my tractor and it cost me over $100 to remedy the damage that I had caused by a few minutes' carelessness." It is even more necessary to have an extra quart of oil in the fuel box of your tractor than to have an extra gallon of gasoline in your motor car—one is dollars and cents—the other is inconvenience—Allis Chalmers Nose Bag.

The Oregon Cooperative Hay Growers' Association shipped 500 tons of alfalfa hay early in November to Atlantic ports via the Panama Canal. Growers netted $12 per ton f. o. b. Hermiston, which was higher than the local market at that time.



No. 26

JOHN DEERE MOLINE, ILL. THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

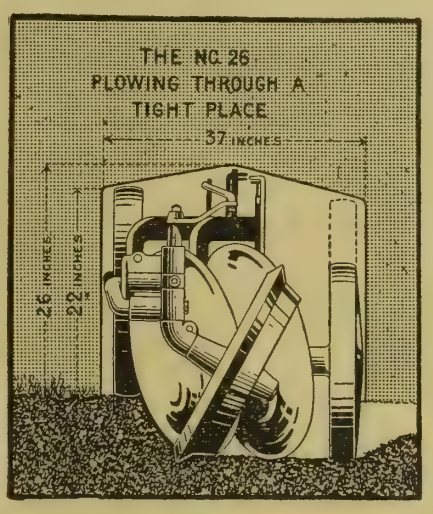
For Good Plowing, Irrigating or Subsoiling in Orchards

The John Deere No. 26 is a real three-in-one orchard plow. For plowing, it has important advantages possessed by no other make. By using the simple, inexpensive ridging attachment, you can check or ridge the soil for effective control of irrigation water.

Another simple attachment adapts this plow for subsoiling while plowing.

Gets under the low limbs, up close to the row. Only twenty-six inches high when plowing six inches deep. Only thirty-seven inches wide. No projections to interfere. Hitch permits wide offset of plow to right or left of tractor for work close to row.

Showing No. 26 with ridging attachment preparing soil for proper irrigation. Attachment costs very little and does away with necessity of buying extra implement for ridging.



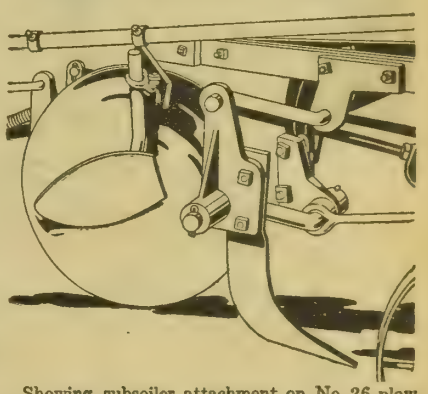
The No. 26 is unusually narrow and low—no interference with tree trunks or limbs.

Stiff Hitch—a great disc-plow improvement. Being stiff, it tends to hold the plow in the furrow when offset, and its control of the rear furrow wheel makes possible short turns and close work at ends of orchard.

Floating Rear End is another important feature. The set-screw collar on the rear axle may be left loose to permit rear end of plow to rise over a root without carrying weight of rear wheel—a great aid in preventing damage to large roots.

Compound power lift raises discs unusually high. Frame built over discs, providing unusual clearance. Discs and disc bearings same as on large John Deere disc plows

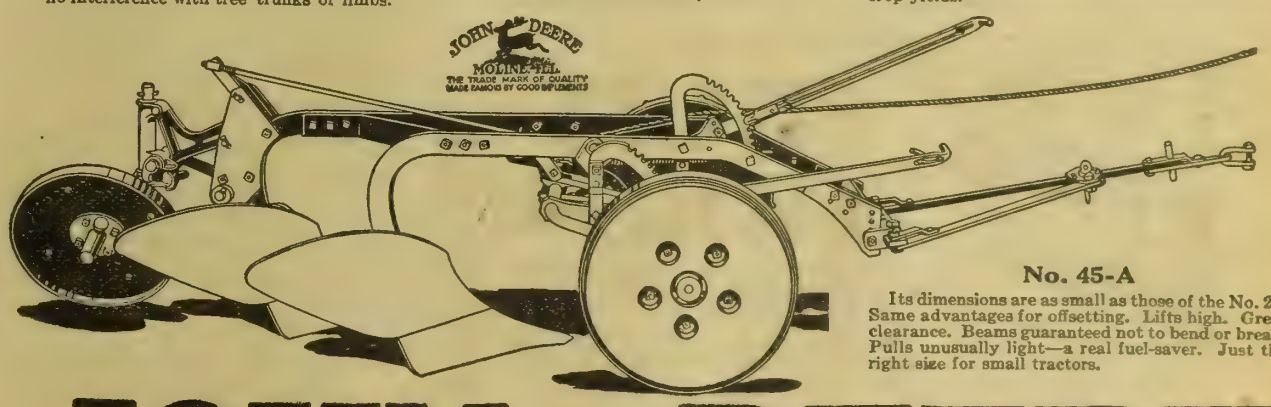
If you need an orchard disc plow for small tractor, get acquainted with the No. 26. If you need a moldboard plow, investigate the 45-A, shown below. Write to us today for a folder, describing the one in which you are interested.



Showing subsoiler attachment on No. 26 plow. Replaces one disc. Controlled by power lift. Permits plowing and subsoiling in one operation with small tractor. Subsoiler breaks up plow pan and forms deep bed of aerated mulch—a process that saves much irrigating water and greatly increases crop yields.

John Deere Plow Co.

San Francisco, Cal.



No. 45-A

Its dimensions are as small as those of the No. 26. Same advantages for offsetting. Lifts high. Great clearance. Beams guaranteed not to bend or break. Pulls unusually light—a real fuel-saver. Just the right size for small tractors.

Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Submergence of Centrifugal

Will variations of the depth of submergence of a centrifugal pump vary amount of water the pump will discharge, the pull on both motor and pump remaining the same? In other words, if the water level in well is lowered, will the amount of water delivered vary because of less submergence of the pump?—Subscriber, Alta Loma.

If the water level is constant, and the speed constant, there will be no difference in amount of discharge whether the pump is a reasonable distance above the water, that is, within good suction distance, or as many feet under water. In other words, if the water can have free access to the pump the relative position of the pump in the well or pond will not affect the flow from the discharge pipe. If the speed of the pump is proper for a particular water level and the water should go above that level there will be a diminution of discharge unless the speed of the pump is increased. It would be possible to have so much change in level of the water in a well that the pump would cease to discharge water even when the pump was running under water. This can happen only with centrifugal pumps. —J. B. N.

Bamboo Scale

Am sending giant bamboo stalk infested with scale which seemed to colonize at the leaf or tiny branch axils. The scale are sometimes nearly one-eighth inch in diameter, though rather elliptical in shape, very light buff or gray color.—Subscriber, Los Angeles.

This scale was submitted to Mr. Edouart of the Los Angeles County horticultural commission and he says it is Asterole caneum Bambusae and is not at all serious, in fact, its attachment to the bark of the bamboo is so slight that a stream of water under pressure is sufficient to knock it off. If one is not where pressure water is at hand they are easily removed with brush and strong soap suds.

Native Bay or Laurel

I inclose a twig cut from a small tree I found growing under an orange tree. It is strange to me, and as it looks well I wish to transplant it. Is it a desirable tree to grow or is it a shrub?—Subscriber, Covina.

Your plant is Umbellularia Californica, our native bay or laurel. It is a very nice, clean, slow growing tree of ultimate large size, a pleasing shade of green at all seasons, with an aroma pleasing to some but very pungent and penetrating if leaves are much bruised or macerated. It is of easy culture, grows slowly in very dry locations yet rapidly among willows in stream beds. It is not easy to transplant, so care should be observed in its removal.

Commercial Carnations

Would like to grow some standard cut flower for market. Soil light, sandy. Prefer a flower that is tough and not delicate to handle, a good keeper that will ship or travel well. Can I plant now and how should flowers be kept for packing or carrying to Los Angeles?—Subscriber, San Gabriel.

Of standard market flowers none are hardier or tougher or a better keeper than carnations. They are much less exacting in all ways except in irrigation than are roses; also they thrive best in light sandy soil. The young plants are best planted in early spring; nothing would be gained by planting now. Flower stems must be kept from young plants during summer, for "holiday" crop. Whites are most in demand, light pinks second. Well watered plants always have flowers in good condition for picking. Pick at night for next morning's shipment and keep in deep water over night, but heads not immersed; in a cool but not drafty place. Six hours is the least time stems should be in water.

Patchouli Perfume

In response to an article, "Patchouli Patches," in our issue of November 12, a chemical firm of New York City, with a branch factory in California, writes: "We are interested in patchouli and would like to cultivate here. Can you put us in touch with any one that has a patch of this herb? We would be glad to pay $100 a ton for the dried herb, baled like hay, and could use between five and ten carloads a year."

As stated in our former article, the patchouli plant, Pogostemon Heyneanus, is a mint growing about three feet high, native to India and Burma. It has no ornamental value, but about 20 to 30 years ago it was introduced and sparingly grown in California. It is one of the commonest perfumes in India, and years ago its presence was considered the sure test of a genuine Indian shawl. As a perfume it has largely passed from popular favor. It is cultivated as a commercial crop in Australia and other parts of the world. We would be pleased to learn of any plants growing in California.

Sebastopol California

a crop. This year I planted some of it in Henderson Bush beans, and they did well but were late in maturing. I have thought some of trying Red Kidneys. Would like to know how they are as to yield and method of planting. Are they subject to mildew? Is there a ready market for them? Part of this land I have pumpkins in. They have done very well but were late getting started on account of too much moisture. I don't think I handled the ground just right as I practiced flat cultivation. How would it do to ridge this soil early in the spring? — Subscriber, Arroyo Grande.

Nearby your section, at Carpinteria, commercial seed growers report the 1921 crops as exceptionally good on similar lowlands and poorer on higher ground, due, it is thought, to continued dry years or insufficient rainfall. Red Kidney beans will doubtless thrive well with you, the yield is good, and the same culture as for Henderson Bush would be sufficient. They are not much subject to mildew, and there is a ready market for them. We suggest that you practice planting on ridges as this method will give better drainage, also a higher soil temperature in early spring.

Dwarf Apple Trees

A subscriber at East San Diego writes: "In last Cultivator I note article on 'Deciduous Pruning Demonstrations' and wish to record my interest. However, I have experimented on a small scale with dwarf apple trees with no pruning. I curb or tie limb growths, and these shrubby trees receive great attention from visitors. Fruit or bloom is in evidence nearly every month of the year. The varieties are: Duchess, Winter Banana, Wealthy, etc. They begin to fruit in a few months to one or two years from graft or bud. The size and flavor are fine. One two year old bore four apples and first one cut showed neither seeds nor core, but apple was large, well formed, well colored and of medium flavor. Question: Why do they grow and ripen out of the catalagued season?"

Sow Bugs in Strawberries

Last summer slugs and sow bugs destroyed large quantities of our strawberries. We used bran poisoned with arsenate of lead with fair success, but it had to be renewed after every irrigation (overhead) and was slow and expensive. Would you please inform me what the large strawberry growers around San Francisco use to combat slugs, etc.?—Subscriber, Ukiah.

We will pass this question on to strawberry growers and suggest that meantime the arsenate be continued, for extremely small quantity is sufficient ordinarily to control the pest. We think instead of making it into a mash with bran better results will be had by mixing arsenate of lead with an equal amount of fine sugar. Other growers use slices of juicy potatoes on which is sprinkled Paris green, left under leaves of the plants or where they gather. Be sure to use only a very small quantity and repeat frequently, this whether irrigation interferes or not.

Curing Olives

I would like recipes for curing and canning ripe olives.—Subscriber, Turlock.

Answering a number of requests for information as to olive curing we refer the inquirers to recipes on page 558 of this week's Cultivator. There is one formula having to do simply with bulk olives as for home use and another method of treatment for canned olives which will keep with no danger of botulinus or other poisoning. However, so far as we are informed there has never been a case of poisoning from the ordinary cured bulk California ripe olive.

Selling Meat

What state and federal regulations does a producer have to meet in order to be able to kill, cure and smoke pork and sell as farm cured?—Subscriber, Downey.

This is a long question or at least requires an exceptionally long answer, for there are so many angles and so many laws that it is more or less complicated. First, we would refer our inquirer to the California Cultivator of March 19, 1921, Page 399, where Attorney Stanton goes at some length into answering this question But, in a word, we may answer from information secured through Attorney D. E. Leighton, connected with the animal industry division of the state department of agriculture. In the first place federal regulations need not be considered unless interstate shipments are to be made. Under the state law the farmer may slaughter and cure pork without license or hindrance. However, if one wishes to slaughter any bovine he may write to State Department of Agriculture, Sacramento, or to the branch in the Pacific Finance Building, Los Angeles, and ask for application blank. He will then be expected to pay one dollar fee (this we believe is to be raised to five dollars at the end of the year) and to put up a thousand dollar bond. Then he may sell. The law under which this becomes necessary was not enacted so much as a protection to the consumer as to check cattle rustling. When this fee is increased to five dollars and it is still necessary to secure the thousand dollar bond it is practically a prohibition of the small ranch selling meats. In addition to the federal and the state acts it must be borne in mind that many counties and a few of the cities have ordinances which require inspection. As to cities this is probably true of less than a dozen, all of the larger cities having their own meat inspection ordinances. Inquiry of county or city clerk is all that is necessary to determine this point.

Killing Stumps

I would like to know how I can kill out eucalyptus stumps without having to dig out.—Subscriber, Hemet.

The best way to dispose of a stump is to get it out entirely. This is possible by digging, use of dynamite or a stump puller. There are stump pullers in the market today which will lift even big eucalyptus stumps. The ground is then immediately available for growing crops and at California land values the cost of a good puller is soon made. However, if one has not the time he should rake off the sprouts as fast as they start and the stumps will soon die. We believe there is no cheaper nor more effective way. If one does not care about economical handling then various chemicals may be employed, but we know of no economical use of chemicals. A good man should go over a row of stumps a quarter of a mile long and with a mattock break off all the sprouts in a very few hours. This operation has to be repeated but few times during the season and the stump will soon give up its life and dry so as to make burning out easy.

SIMPLE METHOD OF SMOKING MEAT

By L. D. JOHNSON

In a few minutes anyone can smoke a season's supply of meat without bother or loss. The secret is in using Wright's Smoke, which may be applied quickly, easily and cheaply with brush or cloth. Wright's Smoke is made of smoke from selected hickory. It gives a delicious flavor and prevents all loss from shrinkage.

For sugar-curing meats you can do away with trouble and save time and money by simply mixing a bottle of Wright's Ham Pickle with 27 pounds of salt. This easily prepared mixture will cure a barrel of meat.

If you want delicious home cured meat get genuine, guaranteed Wright Pure Food Products from your dealer.

Simply send your name to E. H. Wright Co., 841-B Broadway, Kansas City, Mo., for valuable, illustrated book on expert methods of curing meat. Also learn how you can get complete, highest grade butchering set at lowest factory cost.

THE OLD GARDEN

I chanced upon the little bowered retreat
For the first time, and never shall forget
The spell of tangled mystery; the wet
Bejeweled leaves like fingers curled to meet
My childish hand; the unimagined sweet
of brier, heliotrope and mignonette,
The tang of box, and quainter flowers set
By mazy paths for Liliputian feet.

High walls of hollyhock and morning-glory
Concealed the ancient house with gables wide,
Shut out the world of swift and merry hours.
In the strange silence of a fairy story
My heart stood still. Then at a turn I spied
My mother, smiling at the other flowers!

—Abbie Farwell Brown, in Youth's Companion.

SAFETY FIRST

(Concluded.)

Billy Prescott was in love, desperately in love! He knew it was the real thing this time, because he had never before felt so timid about expressing himself. At least fifty times in the last two months he had nerved himself to declare his undying affection, but always, when he opened his mouth to speak, she would turn her melting brown eyes upon him—Betty was small and dark, like Bobbie—and the words would slip back down Billy's throat and land in his stomach with such a thump he could almost hear them splash. He was paralyzed with the fear that she might say no, and of course if she did that would put an end to his visits.

But that was all over now. As usual, Bobbie's tip had been worth its weight in gold. William Alexander felt as bold as the historic Lochinvar. Since Betty had said she wanted speed—well, he would give her speed! He would fairly lift her off her feet with the whirlwind of his affections let loose. He remembered now that Betty liked fast driving. Other girls would hold their breath and turn white or scream with terror when he drove at 60 miles an hour, but Betty—never! The faster he drove, the better she liked it. She seemed to have a natural racing spirit. Curious it hadn't occurred to him that since Betty liked that sort of thrill she probably liked other kinds as well.

With a warm and pleasant sense of anticipation Prescott switched off his light and left the room.

Having parked his machine half way down the block from the Clishold home, William Prescott slipped on his mask before advancing to the door, where he was somewhat surprised to find himself greeted by a ghostly, white sheeted figure instead of the customary Sallie. It seemed strange, too, not to see Bobbie anywhere in evidence, but he supposed that small boy had gone to bed earlier in the evening and was by now dreaming of "the witches that get you ef you don't watch out!"

The apparition at the door pointed toward the stairs. On the second floor another guided him into the men's dressing room, where he found numerous other masked men in various styles of garb, both gay and sober. When he left the dressing room he was directed toward a second flight of stairs that led to the ballroom on the third floor. Here he found the dance in full swing. His eyes searched eagerly for Betty. There were Indian squaws, Colonial dames, hoopskirts and hobbles, suffragettes and ballet dancers, court ladies and peasants galore, but look where he would, Prescott could find no trace of anything resembling a maid's black gown with white cap and apron. He felt vaguely disappointed. Of course, she was there, somewhere, and when they unmasked at midnight, he would find her, but it would take away half the romance and incidentally a good share of his nerve if he didn't get a chance to "speed" while the masks were on.

But William Alexander Prescott was too clever to let anyone suspect that a disappointed heart beat beneath his shiny blue satin. He danced and laughed and whispered pretty nothings in every small pink ear, and behind his mask no one could see that his grey eyes were searching, searching everywhere.

It was nearing midnight. Prescott had reached the stage where he felt that he must get away by himself and smoke a cigarette as a bracer. His courage was fast oozing away. He had anticipated so much! Between dances he slipped out unobserved, and went down the stairs to the second floor. He stepped out onto a balcony. It was dark and deserted. He could have his smoke and get back to the ballroom in time to unmask with the others. He struck a match. As it blazed he heard a rustling sound and saw a dark figure move quickly to one side. Billy stared. It was a woman, small and dark. He could see a splash of white on her head and a big splotch of it on her skirts. Betty, at last!

Billy's heart thumped and pounded against his ribs, his knees wobbled and his arms trembled. He felt a hot wave rising from his heels to his head. He had a strong inclination to run, but he remembered Bobbie's advice, so instantly he shifted to high! He tossed away his cigarette and with two strides he had reached the girl and flung his arms around her.

"Darling!" he cried, crushing her to him. "At last I have found you! Oh, you little bunch of sweetness, I'm going to eat you up!"

He kissed her passionately, on her neck, her arms, her hair. She struggled in his arms, but he held her firmly.

"Oh, don't you know, you sweet thing, that I love you? Don't you know that I have adored you all these months? I'm going to carry you off with me, my little queen!"

He fumbled in the dark until he found her chin, and in spite of protests, he raised her face to his and kissed her once, twice, three times on her full sweet lips.

"Ah!" he whispered, ecstatically.

"Billy—Prescott!"

William Alexander jumped as if he had been shot. Betty! And her voice came from the doorway!

Dazed, he turned his head to look over his shoulder. A vision of loveliness, in a French peasant's costume, met his astonished gaze. "Maid—of Orleans," his dazed mind repeated, slowly. He loosed his hold on the woman in his arms. A flushed face was turned toward the light, a pair of black eyes danced gleefully, and the "sweet lips" parted in a derisive grin.

"Good lord! Sam Carson!"

Chuckling with mirth, the man bolted past the vision in the doorway and disappeared.

"Billy," Betty began, then an irrepressible giggle escaped her and she turned her head away.

Prescott was speechless. His teeth chattered and he shivered. The next moment hot waves of mortification swept over him. What a fool she would think him now! What an uproarious shout would follow Carson's tale! How the story would spread over town, growing spicier with each repetition! Overwhelmed with disgust, and disappointment, he turned his back on Betty and hung his humiliated head in helpless silence. A long, painful moment and then there was a stir, a rustle of skirts and a soft hand was laid gently on Prescott's arm.

"Billy."

No answer. Prescott's teeth pressed tightly together and his hands clenched at his sides.

"Billy—dear."

Prescott's ears pricked up. "Billy—dear," after what had happened? Still he did not turn.

"Billy," her little fingers were pressing his arm and there was a little catch in her voice.

Surprised, yet suspicious that she was still laughing at him, he turned his head just far enough so that he could glance out of the corner of his eye.

"Billy," she whispered, half shyly, "you—you did mean—all that—for—me—didn't you?"

His heart gave a bound. He longed to whirl and seize her in his arms, but even as the impulse came to him his heart sank again and went dead. It looked hopeless—he must certainly be out of gas, but Betty made one final try.

"Billy—won't you—please—go on high again—I—I just love to speed!"

At that Billy's heart began to whir-rrr, his blood began to race madly

through his veins. He turned, looked down into her melting brown eyes, then suddenly he turned on the gas, shifted gears, and they were off—at 90 miles an hour and reckless of consequences!

HINTS FROM HOUSEKEEPERS

To Set Colors

For the lady who wanted to know how to set the color in brown overalls, I am sending the following, which I clipped from another paper:

"For setting colors in pink gingham, use a tablespoon of sugar of lead to each quart of tepid water. For greens, blues, mauves or purples, soak the materials in an alum solution, one ounce of powdered alum to each gallon of water. Brown, tan and buff shades hold their color best by using a cup of vinegar to a gallon of water, and for black, or black and white, use a strong salt solution. For any of the above colors, soak for several hours in the given solution, then rinse and dry and press. Sugar of lead is poisonous, so be careful if there are children about; it is not harmful after being used in the material, though, if the cloth is rinsed well."

I have not tried these, but they come from a reliable source, and hope they will help others.—Mrs. O. S. Allen, Ontario.

Quince Honey

I see by last week's Cultivator some one asks for quince honey recipe. The one I am sending can't be beat:

Make a syrup of 3 pounds granulated sugar and 1 pint water. Grate or put through food chopper 3 large quinces and stir them into the boiling syrup. Let boil 15 minutes. Pour into jelly glasses. This will make 7 glasses of delicious honey.—Mrs. Van Noate, Huntington Beach.

* * *

Having gained so much from your recipes, I will try to repay you to some extent by sending in a recipe which we like very much.

Boil 10 cups sugar and 3 cups water together. Pare 4 large quinces, and grate. Skim the syrup, add the quinces and boil 10 minutes. Bottle and seal. This is very good and is very much like real honey.—B. A. S., Ripon.

Chayotes

As I have never seen any recipes for cooking chayotes mentioned in your columns, I am venturing to suggest a few ways of preparing this most delicious vegetable. When young or half grown they may be cooked without peeling, but the older ones should be peeled.

Take 2 half grown chayotes, slice them thin, as they cook quicker, add 1 medium sized carrot cut in pieces about a half-inch thick and about a cup of green lima beans. Cover with hot water and boil for an hour, or until tender, drain off water, chop in small pieces with cooking spoon, and season with salt, pepper, a rounding tablespoon of butter and a half cup of thick sweet cream, or canned milk will do if not diluted.

For "apple" sauce, and you can hardly tell the difference, slice chayotes thin with a few slices of lemon, which supplies the necessary tartness, and boil in hot water until tender, drain off water, sweeten with sugar to taste and season as you would apple sauce.

If peeled and sliced raw, they make a very good substitute for cucumbers in a combination salad with mayonnaise.—Mrs. Miles Standish, Del Mar.

Salmon Croquettes—Salad Dressing

Salmon Croquettes: 1 can salmon, 3 eggs, 5 or 6 crackers rolled fine, salt and pepper to taste, ½ cup or more of milk sufficient to make batter that can be dropped from spoon. Fry in hot butter.

Uncooked Salad Dressing, made with cream: Rub yolks of 2 hard boiled eggs to smooth paste, add ½ cup thick sweet cream, 1 tablespoon sugar, salt, pepper, mustard and any other seasoning liked. Stir all together until smooth, then add enough vinegar to make it thicken and become smooth and creamy, about 1-3 cup.—Irene D. Payne, Bakersfield.

Soups

Garbanzos Soup: Soak 10 cents' worth of Garbanzos over night. In the morning put on with as much water as you want for soup and add 10 cents' worth salt pork. The last hour add 1 cup canned tomatoes, 2 potatoes cut in small dice, an onion, salt, a small chili pepper and clove of garlic if one likes garlic. This is a delicious soup much used in Porto Rico. Here let me add that garlic should be more generally used. In colds and coughs it is very beneficial and the Spanish people use it to ward off contagion.

Split Pea Soup: Soak 10 cents' worth yellow split peas over night. Boil until tender, add about 2 quarts boiling water, 3 potatoes cut in dice, an onion, 2 slices salt pork, salt and pepper. Season with butter. This is a very cheap and nutritious soup. Dried green peas can be used the same way.

Barley Soup: This is best made from mutton, but beef can be used. When the bones have boiled several hours skim well and add 4 potatoes cut in dice, 1 small onion, 1 cup pearl barley.

Vegetable Soups: Take a good beef soup bone, preferably one with quite a bit of meat on it. When green peas are in market, make with potatoes, 1 cup peas, 2 cups tomatoes. Always add onion and celery, and the last half hour one-fourth cup rice.

Asparagus and tomatoes are a delightful combination. Cauliflower and tomatoes are very appetizing. I save the green stems of cauliflower and cut into dice. Flavors the soup wonderfully. Tomatoes and spaghetti make a rich soup.

Dried lima beans soaked over night added to vegetable soup, cabbage, tomatoes, onions, potatoes, celery, are very good. Green corn cut from cob, with tomatoes and green peppers, is another fine combination.—Aida.

HOUSEHOLD QUERIES

Mustard Pickle

Could you please publish a mustard pickle recipe in your columns? The recipe I refer to calls for tumeric powder, string beans, onions, cucumbers and green tomatoes. I have lost my recipe and have forgotten the proportions, and wish very much to get it again.—Subscriber, Ripon.

Two excellent recipes for these pickles were given in the Cultivators of July 9 on page 37, July 23 on page 84. Copies are being mailed to the inquirer.

NEW PEACH RECIPE BOOKS

The new Blue Ribbon Peach Recipe Books are ready for distribution to housewives who will write to California Peach & Fig Growers, Holland Bldg., Fresno, and request a copy.

These new books show many tempting dishes in colors. The recipes were compiled by Marion Harris Neil and other culinary artists of prominence. Miss Mabel Caldwell, educational director of the California Peach and Fig Growers, edited the book and is responsible for some of the delicous fruit combinations featured.

Here are some of the good things to be made from Blue Ribbon peaches suggested to be included in Holiday menus, by Mabel A. Caldwell:

Peach Cream Pie

1½ cups Blue Ribbon peach pulp, 1 tablespoon cornstarch, 1 cup thin cream, 2 eggs, separated; ½ cup sugar, 1 teaspoon vanilla extract, 2 tablespoons lemon juice, pie crust.

In the upper pan of a double boiler mix cornstarch and cream, cook over hot water until thick. Mix yolks of eggs with sugar; add peach pulp, vanilla and lemon juice. Pour slowly into cream and cook five minutes. Line a pie plate with hot water pie crust,

Let your Kodak keep the Christmas Story

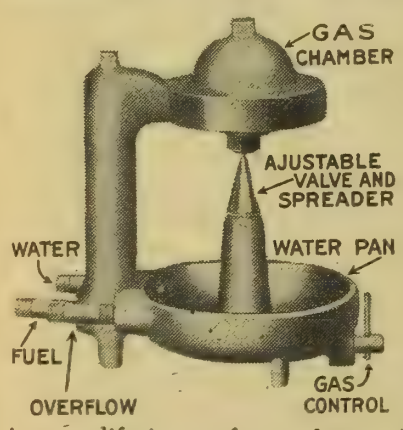
The Fire of the Future

Recent invention solves problem of high cost of heating: Working on entirely new principle. TESTER WATER GAS BURNER heats and cooks at minimum cost; uses kerosene and water for fuel; fits any stove or range. Inexpensive—economical—safe.



After successfully meeting every test required by heating experts The Tester Water Gas Burner is now for the first time, offered to the public as a practical and economical method of heating and cooking. Burning coal oil gas and water, The TESTER BURNER instantly generates any degree of heat required, is smokeless, noiseless, simple to operate, generates its own gas, is ready at the touch of a match, can be fitted to any stove or range, cannot carbonize or clog up, and will give a lifetime of comfort. The TESTER WATER GAS BURNER is DIFFERENT from any other heating device and is fully protected by patents and patents pending.

Demonstration of this wonder device daily at 1081 Mission Street, San Francisco. Agents and representatives wanted in every locality in United States and Canada. Satisfy yourself by ordering one for your range or stove, under absolute written guarantee of Company of money back unless pleased. Then become agent for your neighborhood. Price of outfit complete, $35.00 delivered anywhere in California.

Apply to Manufacturers

THE TESTER OIL AND BURNER COMPANY

1081 Mission Street, San Francisco, Calif.

fill with mixture and bake. Cover with a meringue made of whites of eggs and 2 tablespoons of sugar. Brown lightly and serve. Simply delicious.

Peach Conserve

2 pounds Blue Ribbon peaches, 1 pound seeded raisins, 2½ cups light corn syrup, ½ teaspoon salt, ½ pound blanched almonds. Grind or chop Blue Ribbon peaches and soak until softened in just enough water to cover. Add raisins, syrup and salt and cook until mixture thickens. Add nuts, boil for five minutes, pour into sterilized glasses and seal. Good for luncheons.

Steamed Peach Pudding

2 cups Blue Ribbon peaches (soaked in water a short time), 1 cup raisins, 2 cups flour, 1 cup milk, ½ teaspoon nutmeg, 1 cup chopped figs, 2 eggs, ½ teaspoon salt, 4 level teaspoons baking powder, 2 tablespoons melted shortening, ½ cup sugar (brown, if preferred), 1 teaspoon cinnamon.

Sift dry ingredients, add milk and egg and spices, then add uncooked peaches and melted shortening. Steam for two hours. This is a good, substantial dessert.

Spiced Peaches

7 pounds Blue Ribbon peaches, softened; 1 stick cinnamon, 1 tablespoon whole cloves, 3½ pounds sugar, 2 cups vinegar.

Cut softened peaches in slices and put them into a preserving kettle with sugar and vinegar. Add spices tied in a cheesecloth bag. Cook to a thick marmalade and seal in small sterilized jars. The spice bag should be removed.

TO CUT DOWN A BEAVER HAT

Do not use scissors or knife. Remove bobbin and thread from sewing machine and make smallest possible stitch. Mark size desired on brim of hat with tailor's chalk, or if edge is to be same all around place gauge on the machine. Place hat between foot and feeder and run as if making seam. Sew twice in the same place and break hat apart at the place where it's been stitched. Needle cuts through heavy part of brim but does not break hair and edge comes out as soft and fuzzy as when hat origially came from the factory. The part of the brim which is removed may be utilized as trimming by cutting into different shapes, using the same method as was used for the hat.

PROTECT LEATHER FURNITURE COVERINGS

Leather furniture coverings last longer and look better if occasionally rubbed with castor oil or some commercial furniture polish which will restore the oil which gradually dries out. The liquid should be rubbed in well and the excess taken off with a soft cloth. Otherwise the film of oil will collect dirt, darken the leather and soil whatever touches it.

GREEN TOMATO MINCEMEAT

8 quarts green tomatoes, 2½ pounds brown sugar, 2 pounds raisins, 1 pound beef suet, ½ cup vinegar, 2 tablespoons salt, 2 tablespoons ground cinnamon, 1 teaspoon ground cloves, 2 teaspoons nutmeg, 2 cups chopped apples if desired. Slice tomatoes thinly or put through food chopper. Allow to drain, cover with cold water, place over fire and boil 5 minutes. Drain well, add suet, vinegar, fruit and seasoning. Return to fire and allow to simmer from 30 to 45 minutes. Pack hot.

SAY, "HELLO!"

Stop a minute and say "Hello"
As down Life's Road you go;
For a kindly word and a cheery smile
Will shorten the way by many a mile.
For some poor fellow who's moving slow.
Stop a minute and say "Hello."
—Michigan Tradesman.

A BAD SPELL

Mother—Well, dear, did you win the spelling match?

Elsie—No, mamma, I put too many z's in scissors."—Boston Transcript.

Think individually and act collectively and you won't have to worry about how to be of some use in the world.

New Lamp Burns 94% Air

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, W. V. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

Livestock News Notes

The Shasta Stock Farm of Pasadena writes that it has secured a two year old line bred Ormsby from the McCloud River Lumber Company herd. His sire is a son of Sir Pietertje Ormsby Mercedes from a 30 pound cow with a three year old record of 863 pounds for the year and a dam with 1009 pounds for the year. His own dam is sired by a brother of Pietertje Maid Ormsby who has only about 12 registered daughters. Of these nine have seven day records made at an average age of four and a half years, and all run from 20 to 31 pounds. She made 27.7 pounds in seven days and is now finishing a year record of 1000 pounds as a four year old. Her dam has four daughters by four different sires with records as follows: A nine year old made 25 pounds, a four year 28.3 pounds, a six year old 37 pounds in seven days, 845 pounds in 190 days and is still going strong, and the fourth one as given above. Shasta Stock Farm is owned by Messrs. Hukill, Cook and Nelson.

The public sales of registered Holsteins are apparently over in California for 1921, and breeders of black and whites have reason to feel satisfaction with the sound values maintained by the breed in this state during the past year. The books of California Breeders Sales and Pedigree Company show that the Holstein breeders of the state have sold a total of 1,511 head of registered Holsteins through their service since January 1, 1921, which includes every animal sold, for a total of $527,835, or an average of $349 per head. Their records also show that in spite of one or two bargain offerings that developed during the fall sales the better class of cattle maintained their values exceedingly well, and the sale season closed with a strong unfilled demand. The closing sales of the year were attended by some of the largest crowds of the season, composed almost entirely of new buyers who were apparently somewhat uncertain as to values and in a number of instances permitted cattle to get away from them at prices so moderate that they can scarcely expect to duplicate them when the 1922 sale season opens.

Ruby Queen Hengerveld, owned by Agee Bros., Rivera, recently added herself to California's list of 1,000 pound yearly record cows. Calving at the age of 9 years 7 months, she made 26.44 pounds butter from 567.1 pounds milk in 7 days. Continued on yearly work she recently finished a 365 day record of 1,057.15 pounds butter from 26,054.8 pounds milk. She was never under shelter during the year, ran with the dairy herd and was given the same amount of hay and grain as the rest of the cows, except that during the last four months of her test she was kept in a pen by herself.

More than 1,500 people attended the third annual Kings County Pork Day show and sale held at Hanford, November 17. Twelve carloads of fat hogs were exhibited, besides many smaller lots. The Corcoran center won the class for farm centers; Stratford was second, Grangeville third and Lemoore fourth. Corcoran center also won the class for a pen of five. Bassett Bros. showed the winning carload in the individual competition as well as the best pen of five. G. I. McCune won the class for single barrows. In the final awards Bassett Bros. had the champion carload; Corcoran center, the best pen, and G. I. McCune the best single barrow. J. I. Thompson of Davis made the awards. Following the judging the hogs were sold at auction, the top car bringing $10.20 per hundred.

J. E. Wherrell, Jersey breeder of Riverside, has purchased a number of heifers from the St. Cloud herd in Texas. Three of them have freshened with their second calves and all have made the Register of Merit.

Mrs. J. E. Knight of Willows has purchased from T. S. Cooper & Sons of Pennsylvania the year old Jersey bull, Eva's You'll Do of Lehigh, a son of the Cooper bull, You'll Do's Handsome Raleigh. Mrs. Knight has a small herd of about 20 head, but it is her intention to build it up to considerable proportions.

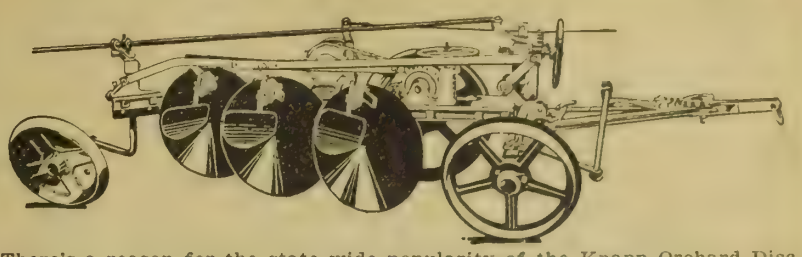
California's Oldest Orchard Disc Plow

The Knapp Power Lift Orchard and Field Tractor Disc Plow



There's a reason for the state-wide popularity of the Knapp Orchard Disc Plow. In the first place its manufacturers are pioneers in the Orchard Disc Plow business. It is a California product built expressly to meet California requirements—hundreds of Knapp Plows are in successful operation.
There are many special Knapp features of construction which with the 1921 improvements make it the unchallenged leader in Orchard and Vineyard as well as field work. It is built low, has narrow frame, light draught, and has no levers of any kind to injure low hanging branches of trees.
The Knapp frame permits plowing close to trees either to or away, and is adjustable to hard or soft soil. It is particularly adaptable for plowing under high cover crops.
The KNAPP HITCH, which enables the operator to plow to or from the trees by making but one adjustment, is a revelation in tractor hitch construction. The Hitch has an automatic wheel lock which permits backing the plow.
The KNAPP POWER LIFT is gearless and has less working parts than any other power lift made—only one part is in continuous motion and this part is dust proof.
KNAPP PLOWS come in two, three and four disc sizes. They are built of finest grade materials obtainable. Thus the purchaser of a KNAPP ORCHARD DISC PLOW is insured perfect plow satisfaction.

Even If You Could "Coast"
EVERYWHERE
In the Old "Bus"
It Would Cost You More
Than
Pacific Electric Fares

The Gas you burn is only a small item in your total cost of operation. Add to that the cost of oil, rubber, repairs and depreciation in the value of the machine, and see "where you are getting off."

The Government says it is costing you from 9c to 14c per mile.

You can ride the Pacific Electric way for 3c per mile for the occasional journey and for about 1½c per mile for the frequent (commutation) trips.

"CAN YOU BEAT IT?"
YOU CAN NOT!

Ask any Pacific Electric Agent for the Commutation Fare on tickets best adapted to your travel needs. He will show you the true way to travel economy, and you do not carry the accident risk.

Requesting your local merchant to stock articles advertised in the California Cultivator helps your town, the advertiser and the Cultivator.

between 70 and 80 lbs. butter fat during the month, and 17 between 60 and 70 lbs.

The prize offered by the California Cultivator for the highest average production by five grades for the month of October was won for the fourth time by Earl Graham of Compton. The average production of the five highest grades eligible to compete for this prize was 57.73 lbs. butter fat during the month (average milk 1254 lbs., test 4.60 per cent, average distance from freshening, 168 days). The production of the individual cows ranged from 49.0 to 69.6 lbs. butter fat. These cows stood first among similar groups of five grades in 16 dairy herds in different parts of the state that competed for the Cultivator prize the past month. The average production of butter fat for five of the groups came above 50 lbs. of fat durnig the month, viz., E. Graham, 57.73 lbs.; P. Iversen, 54.58 lbs.; W. D. Early, 53.05 lbs.; J. A. Genzoli, 50.55 lbs., and M. Pontoni, 50.41 lbs.

Table shows cows completing the record period in ten months (305 days) in the competition during the past month. They are given in the order of their owners, alphabetically arranged, except for the record cow for the month, which is placed first.

SOUTHERN CALIFORNIA JUDGING TEAM GOES TO INTERNATIONAL LIVESTOCK SHOW

A livestock judging team made up of Southern California high school boys who made the best scores in the livestock judging contest held at the Southern California fair at Riverside recently at which 167 entrants competed, left Monday, November 21, for Chicago, where they will compete with teams from many other states at the International Livestock Show, the real livestock classic of the country. These boys were Herman Darling of Los Angeles, Ralph Stokes of Long Beach and Wilder McCullough of Van Nuys, with Rupert Myers of Long Beach as alternate. H. A. Miller of the agricultural department of the Los Angeles Chamber of Commerce accompanied the boys.

The judging work taken up through these judging contests at both the San Fernando Valley Fair and the Southern California Fair at Riverside are the outgrowth of agriculture club work. Many agencies have been interested in this club work and have helped financially as well as giving their moral support to this movement in order that this team might be sent back and Southern California represented at this show.

SALVAGE THE TUBERCULOUS

In a recent issue of the Journal of the American Veterinary Medical Association a brief description is given of a plan conducted in Wisconsin in 1918-19 of salvaging condemned tuberculous cattle by segregation on a concentration farm. The physically fit cows were milked and the milk sold to manufacturers of condensed milk. The calves were sold for veal and the cattle sold from time to time. In the plan as suggested for a permanent state project the equipment should consist of a concentration farm to which all reactors would be sent, the valuable purebreds being conspicuously marked, a second farm to which valuable cows should be sent for breeding, and a third farm where the calves should be sent until tested and passed by two tuberculin tests.

CALIFORNIA HAS HEREFORD CATTLE

Census figures show that there are 5,238 registered Hereford cattle in California. There are 2,865 registered Hereford bulls in service on the farms and ranches of the state. There are 484 farms and ranches reporting that they are engaged in the production of purebred Hereford cattle.

For the entire United States the census shows: 14,931 farms engaged in the raising of purebred Herefords, 405,582 registered.

The League of the Southwest convenes in Riverside, December 8, 9 and 10. Representatives will be there from Canada and Mexico as well as the western states. Secretary Fall of the Interior is one of the speakers.

Sir Aaggie DeKol Mead

Bred in the richest Aaggie Acme-De Kol of Valley Mead cross, he should be one of the greatest young sires of the breed.

Five of his seven nearest dams average:

Butter	2 Years	2,040.97 Pounds
Milk	2 Years	41,547.20 Pounds
Butter	1 Year	1,130.66 Pounds
Milk	1 Year	23,096.60 Pounds

His seven nearest dams average:

Butter	7 Days	30.47 Pounds
Milk	7 Days	627.60 Pounds

His calves are just what we could expect from a long succession of great sires and dams, and in their present state of development fulfill every promise in the pedigree of their great sire.

Good business judgment will eventually prompt you to place at the head of your herd a bull of Aaggie Acme-De Kol of Valley Mead breeding.

Beautiful Chinese Ringnecked Pheasants $12 per pair. Pause Pheasantry, Fairoaks, California.

Care of Hatching Eggs

From Circular of Poultry Producers of Southern California.

AS THE writer looks back over the last 15 years it seems plain to him that the poultrymen who embarked in the business in Southern California have succeeded or failed in proportion to their ability to produce eggs which not only hatched well but also produced chicks strong enough in vitality to be raised successfully in a brooder. The underlying causes of failure have been various. In some cases the ration did not enable the hen to lay an egg which would produce a strong chick. Sometimes green feed was not fed in sufficient quantities. At other times unsanitary conditions on the premises placed too heavy a burden on the hen, and as a result the average egg production was too small, and in addition such eggs as were set failed to develop large hatches of satisfactory chicks.

Why

Nine times out of ten unless the incubator went seriously wrong at some definite time the cause for poor hatches falls into two classes: First, eggs of low vitality when they were laid, or second, eggs which lost their vitality owing to mistaken care.

When a hen has deposited a fertile egg in the nest it carries within its shell a full measure of possibilities. Nothing a poultryman can do will add any element of strength or increase the vitality of the possible chicks which he hopes to hatch. As soon as the egg is laid, being of such a perishable nature, the forces of deterioration begin to work, and in five or six days this becomes apparent in the slowly declining percentage of hatchability. One of the problems which confront the poultryman is to care for his hatching eggs so as to confine the deterioration to its lowest limits. The two chief factors which tend to destroy the quality of hatching eggs are: First, evaporation or loss of moisture, and second, too high or too low a temperature at which the eggs are kept before they are actually placed in the incubator.

Storage

An egg cabinet or other storage device for hatching eggs that has a draft of air coming through will be fatal to the living germs in most of the eggs. A fertile egg contains a group of living cells which in some measure can be chilled to death by low temperature the same as would happen after incubation had progressed for a time. Therefore, in weather that is frosty at night it will be well to keep the eggs where the temperature does not fall below 50 degrees. On the other hand, at a temperature of 85 degrees or more the germ cells begin developing; however, not in a natural way, and as a result the embryo dies soon after the egg is set. Thermometers should be placed in the egg case so that we can learn the actual temperature, because as a rule the poultryman does not realize how cold his eggs become in the winter. It is not necessary for an egg to freeze and crack the shell to destroy its hatchability. With an idea of moderating the temperature somewhat in warm weather the eggs can be aired at night and covered in the daytime, but in cold weather they should be aired in the middle of the day and blanketed at night. The writer has experimented both in the Sacramento Valley and in the San Fernando Valley in an effort to produce good hatching eggs during hot weather. He has found that even though the temperature reached 107 to 109 degrees in the middle of the day that it is possible to care for eggs so as to prevent injury.

A Cooler

Many poultrymen in Southern California have seen the so-called Chinese cooler, which is merely a frame having a metal cover and burlap walls.

A tiny stream of water is then allowed to trickle down the sides, keeping them moist. This crude device is used quite extensively in the hot interior valleys where it is not possible to secure a supply of ice. As a device for keeping hatching eggs in good condition the cooler should be large enough so that attendant may walk into it and move egg cases. Ordinarily 6 by 6 by 6 feet would afford ample room for holding hatching eggs. The cooler should be set in the shade, but where the air moves freely, and needs no other protection. Regulate the flow of water so that as nearly as possible the walls are kept damp with a minimum of overflow. Even for market eggs this device is used with great success where there are high summer temperatures. The reader will note that this Chinese cooler not only supplies moisture so that the eggs will not evaporate, but also tends to reduce the temperature under ordinary circumstances about 30 degrees. Frequently hatches in the fall and late spring have not been successful owing to injury to the hatching eggs from excessive dryness and high temperature, but the experience of several poultrymen leads us to believe that with the eggs placed in the Chinese cooler it is possible to make much better hatches of strong little chicks.

Selection and Care

A few suggestions as to the proper selection and care of eggs intended for hatching:

Gather the eggs twice a day. In the event that you have an abundance of eggs, select from those laid in the fore part of the day. The morning eggs are heavier and larger as a rule than the eggs laid between two and four o'clock.

Keep the nests clean so that the eggs will not be soiled. The presence of manure or yolk of egg on the shell will usually destroy hatchability. In wet weather eggs stained with mud are not injured for hatching unless the mud is badly mixed with organic matter.

Do not try to hatch an egg laid on the droppings board or out in the yard. Unless a hen habitually lays in such a place these eggs will not hatch.

Select eggs with smooth shell. Owing to excessive evaporation eggs with thin ends will not hatch well in an incubator. The condition of the shell also tends to indicate the vitality of the hen. It is difficult for a hen under heavy egg production to produce smooth shells, and weariness on her part is usually shown in shell defects. Bearing out this idea, thin shelled

POULTRYMAN'S CALENDAR—DECEMBER, FEEDING FOR EGGS

The poultryman's efforts this month, when eggs are bringing the top price, will necessarily center on getting as many eggs as possible. The pullets are well matured and most of the old hens through the molt. Now is the time for a full ration containing plenty of protein, an abundance of green feed and extras in the shape of sour milk, moist mash and green cut bone. If only the birds have all the greens they will consume it is hardly possible to overfeed them with protein feeds. There are many excellent prepared mashes on the markt. If the poultryman prefers to mix his own he may save some expense but he will probably have no better mash. A mash formula which is in use at several egg laying contests contains 240 pounds bran, 180 pounds ground oats, 180 pounds middlings, 80 pounds soy bean meal, 60 pounds beef scraps, 60 pounds fish meal, 30 pounds charcoal and 4 pounds salt. The scratch mixture used with this mash consists of equal parts wheat, cracked corn, milo and whole barley. Green feed is before the hens at all times as is the dry mash. At noon a small quantity of the mash is moistened with sour milk and fed in troughs. At 2 o'clock sprouted oats are given. An hour before dusk the hard grain is fed in deep litter, from 10 to 12 pounds being allowed 100 hens per day.

Cheap Feed and High Priced Eggs

—make the industrious laying hen Queen of the Barnyard these days.

Don't let your hens become fat and lazy. Don't let the egg organs lie dormant all winter long.

You can speed up egg production.

You can make your hens lay now by feeding

Dr. Hess Poultry PAN-A-CE-A

Universally Endorsed—Universally Used

—by the big ten-thousand-hen plants—by the average farmer with his 200 hens—by the back-yarder with his only a dozen hens to consume the table scraps. Pan-a-ce-a tones up the dormant egg organs, so that the proper amount of a hen's food goes to egg-making—and not all to fat, flesh and laziness when it's action and eggs you want.

A Pan-a-ce-a hen is always a hungry hen, an industrious hen—she gets off the roost winter mornings ready to scratch for her breakfast. You can depend upon it that the healthy, hungry, scratching, singing hen is the laying hen—the paying hen.

Always buy Pan-a-ce-a according to the size of your flock. Tell your dealer how many hens you have. He has a package to suit. Good results guaranteed.

30c, 60c and $1.25 packages. 25 lb. pail, $3.50; 100 lb. drum, $12.00. Except in Canada.

Dr. Hess Instant Louse Killer Kills Lice

Announcing a Change in Policy

In response to demands, numerous and insistent, we announce a radical change in policy.

After December 1st, 1921, we will sell hatching eggs direct to the poultryman. This is done more particularly as an appreciation on our part of the many kindly comments, verbal and written, by our friends and followers.

We shall inaugurate no extensive advertising campaigns. The eggs will be available if they are wanted.

Our birds will, as heretofore, be bred and mated primarily and solely for carrying on our own work. If you get an egg from us you have the assurance that one just like it has gone or will go to make up our own hatches. We never have and we never will do otherwise.

The only distinction we claim for our birds is the fact that they have netted us what seems like a tremendous lot of money. **IN THREE YEARS** during th high-price period, an **average of 4345 BIRDS GAVE US A NET CASH PROFIT OF $29,356.16.** It is the blood of these birds that will flow through the chicks we shall hatch in 1922 and which the purchaser of our hatching eggs will likewise have.

THE EGGS ARE OFFERED AT $10.00 PER 100, $100 PER 1000
SETTINGS OF 15 AT $2.50

Circular, with further information as to matings and flock-average records of pullets and yearlings, on request.

JOSEPH H. TUMBACH

R. R. No. 2, Box 403, Lincoln Ave. and Ventura St., Pasadena, California

Our methods in detail will be found in the cloth-bound volume entitled **"How I Made $10,000 in One Year With 4200 Hens,"** which may be read in almost any public library. Copy will be mailed on receipt of $2.50, which will be refunded on return of the volume in good condition within five days if you have not had your money's worth.

Your appreciation of the California Cultivator can be shown best by writing to and buying from Cultivator advertisers.

eggs usually have a thin and watery white.

The Age of Eggs

In practical incubation eggs hatch best when set from three to five days from the nest. Eight to ten days under ordinary circumstances is as long as eggs should be held. As an experiment it is possible to hatch a few chicks from eggs six weeks old. At one time there were a number of chickens in Los Angeles hatched out of imported Chinese eggs. Heavy laying has a tendency to lower the percentage of hatch owing to the fact that the living cells are somewhat underdeveloped. Therefore a hen laying every other day will produce a stronger hatching egg than a hen laying every day for a long period. For this reason a stimulation of breeding hens is almost as harmful as underfeeding.

Three things seem to be necessary in our intensive system: Feed plenty of green feed, wheat bran and raw bone.

Color of Eggs

California is attempting to establish a reputation for a high grade quality of snow white eggs. The Pacific Coast white egg has a good reputation in the eastern markets but buyers object strenuously to yellow or tinted shells. Because we are dependent on New York and other eastern markets to handle our surplus it is well for all commercial poultrymen to be careful in the selection of hatching eggs to the end that we reduce the tinted shells to the minimum number. It is probable that clam shell with a reddish tint influences in some measure the color of the egg shell. This of course may be remedied by feeding a shell material which is white. However, a portion more or less great of the tint in California white eggs is owing to heredity and would have been eliminated long ago if the poultrymen had been careful not to set from any eggs other than those chalk white.

PACIFIC COAST HOLDS RECORDS

Poultry culturists on the Pacific Coast are taking the lead in the production of high record White Leghorns. At the close of the first egg laying contest held in Western Washington our attention is called to several new records which we will no doubt find hard to equal: The remarkable flock average of 210½ eggs per bird for the entire 225 birds entered in the contest. The winning pen, owned by D. Tancred, Kent, Washington, which laid 1,306 eggs, an average of 261 1-5 eggs in 365 consecutive days. These five birds were the original ones entered, no mortality losses causing the use of any of the alternates. However, the record at Leavensworth, Kansas, for the season of 1918-1919, of 311 eggs by a pen of five White Leghorns appears to still be the real high water mark. The two high hens at the First Western Washington contest tied with 312, good shaped, standard sized eggs, thus breaking the American egg laying contest record of 311 eggs. It might be well to bring to the attention of those who believe it necessary for a good utility Leghorn to be possessed of a beefy comb, squirrel tail and coarse type in general, the fact that the winning pair at the Western contest, with records of 312 eggs were of Standard type, good head points, beautiful backs and with tails true to Standard. The winning pen of Leghorns would score 90 points or better without being put in show condition. —Cooperative Poultryman.

CALIFORNIA FARM BUREAU EGG LAYING CONTEST AT SANTA CRUZ

High pens for November 1 to November 10. Alex Stewart, Santa Cruz, 78 eggs; J. J. Shore, Santa Cruz, 72; D. B. Walls, Petaluma, 71; Hanson's Poultry Farm, Corvallis, Oregon, 68; Sunrise Poultry Farm, Santa Cruz, 67; C. H. Russell, Santa Cruz, 67; H. H. Corbett, Santa Cruz, 66; L. A. Thornewill, Santa Cruz, 66; C. P. Brooks, Santa Cruz, 63; Kinmont Poultry Farm, Seattle, Washington, 59; E. D. Crewdson, Santa Cruz, 57; Pacific Trapnest Station, Windsor, 56; Sea Breeze Poultry Farm, Capitola, 55; Piper's Poultry Place, Santa Cruz, 53; W. J. Neef, Santa Cruz, 53; L. A. Thornewill, Santa Cruz, 53; Warren Wood, Santa Cruz, 51; Boehm & Noel, Hayward, 50.

All above are White Leghorns. The total production in the flock is still on the downward grade due to continuation of neck molt. This seems more severe than in past two years, and it is the opinion of some of the local poultrymen that it may be due in part to the great fluctuations in weather temperatures which we have been having during the past six weeks.—Max Kortum, Manager.

FOWLS OF FINE FEATHERS

The ornamental breeds and varieties of chickens often have an unusual appeal. A breeder who may be first attracted to such fowls by their unusual plumage may develop a flock later which has decided utility value, an activity which thus responds to the desire for something exceptional and at the same time profitable. Farmers' Bulletin 1221, issued recently by the United States department of agriculture on standard varieties of chickens, is the fourth in a series from the bureau of animal industry.

The present bulletin treats of the principal reasons for keeping chickens and goes into particular detail regarding the fowls in these classes: Polish, Hamburg, Game; Oriental, in which are the Sumatra and the Malay; and two miscellaneous breeds, the Sultan and the Frizzles.

The poultry industry of the United States is concerned mainly with the production of food, but in addition to this there are fowls of much beauty of plumage or form kept merely for pleasure because of their rarity or unusual appearance. It is this latter interest which accounts for a large number of the breeds and varieties and for the variation in type, color, and color patterns. The bulletin may be had free upon application to Division of Publications, Washington, D. C.

Stop Hatching Weak Chicks

Chicks that hatch a few days mean with cheap incubators. Remember, it is not how many you hatch that counts but how many you raise. out weak and wobbly, and live but nothing to you but trouble and loss.

Queen Incubators

produce large hatches of strong, vigorous chicks that live and grow. The Queen is accurately regulated—taking care automatically without attention of a variation in temperature of 70 degrees without danger to the eggs. It is built of genuine Redwood—very scarce in these days of imitation. Redwood does not absorb the odor from hatching chicks. Cheaper woods and strawboard or composition lining in iron or tin machines, retain the odors, to weaken and kill the chicks of later hatches.

Queen Incubators and Brooders are sold by dealers everywhere. Send for Free Book. (42)

Our National Bird of Freedom

By Jean A. Koethen

THREE hundred years ago last December, when our Pilgrim forefathers landed on the stern and rockbound coast of Massachusetts, they found, among all the new and strange creatures that greeted their wondering eyes, one that must have seemed like an old friend. We may easily believe that on their first hunting expedition into the wilderness Governor Bradford and his friends sighted, roosting on the topmost branch of a wind-racked pine, his lordly head gleaming bright against the wintry sky, a bird that greeted them with a lusty "Gobble, gobble, gobble," and drew from their astonished lips expressions of recognition and gratification.

The turkey had been known in England a hundred years before 1620, and while it was found only on the tables of royalty and the very wealthy its reputation reached to the humblest cot, for no bird so fit for a great celebration, so large, so tender and juicy, or of so delicious a flavor had been seen there before. Its beauty, too, was amazing, far exceeding that of the conceited peafowl, and it bore itself with a regal air that hinted at lordly domination in those far western forests. No wonder Governor Bradford and his followers were delighted to find the choicest meat of the king's table theirs for the hunting.

The turkey the Pilgrims found on the New England coast was not the oscellated turkey which early Spanish explorers found in Mexico whence they immediately introduced it to the continent of Europe, but the common wild turkey of North America (Meleagris americana), which was found east of the Rocky Mountains from Canada to Florida. The Indians of Mexico had already domesticated the oscellated variety, the ancestor of our Mammoth Bronze. The North American wild turkey was more like the Narragansett in size and color, though in Kentucky and some other portions of the Middle West it showed a reddish coloring which marked it as progenitor of the Bourbon Red.

As the turkey had already become known in England as the bird for feast days, so it stepped naturally into the same position in the New World, and for 300 years it has been the standardized center of the Thanksgiving and Christmas dinner. No wonder the turkey industry is one of increasing magnitude and the problems of turkey culture are studied with interest by thousands of breeders and scientists.

Hard to Raise

If all the turkeys hatched every year lived to grace the Thanksgiving table we might be paying 15 cents a pound instead of 45. Almost every man and woman interested in poultry has tried at some time or other to raise turkeys. If the first venture was successful a second was tried, and only the utter failure which sooner or later tries the souls of all of us could quench their enthusiasm. The lack of vigor of very young turkeys is the more surprising and anomalous because adult turkeys are extremely vigorous. The turkey grower that can bring his turkeys up to three months of age is through with his troubles. Thereafter they roost on high fences or in trees, eat anything within reason, and are rarely troubled by lice or disease. The problem is to get them through those first three months.

Heat plays a large part in the life of baby turkeys. Many of those that die the first two weeks are undoubtedly victims of chill. Especially is this true of poults mothered by chicken hens. If the hen is carefully watched and kept in a small, warm coop where there is little chance to scratch or move about she may mother her charges properly. If she is allowed to uncover them in the chill of early morning their lease of life is short. Many turkey breeders prefer artificial brooding on this account. The poults can be kept warm when they need heat and are not dependent on the vagaries of a temperamental Biddy.

Another critical factor in raising poults is diet. There seems little doubt that the majority of those that survive the first two weeks are killed by overfeeding, but determination of the exact amount of food required is so delicate a matter that the most careful feeders rarely raise over 70 per cent of the poults they hatch, and 50 per cent would probably be nearer the average the country over, including farmers, backlotters and turkey specialists. "Keep them hungry" is the rule we all try to follow, but it is possible to keep them too hungry in infancy, and the word "hungry" is not easy of definition at the best so we muddle along, overfeeding when we think we are keeping the rule, and in the end our little turkeys pay the reckoning.

Absolute cleanliness is the third essential in raising poults. Coops must be moved frequently, brooders cleaned daily, louse powder used weekly, water always fresh and clean. This careful attention, with the frequent and watchful feeding of the first two months, and the time spent in grinding or chopping feed, makes the labor and expense of turkey raising greater than might be supposed at first sight, and expectation of a fair profit in the end is the only incentive that will keep turkey growers at their too often disappointing task.

Organization Necessary

Turkey growers of California have not as yet organized for the marketing of their product, except for a very few local associations, but the matter is under consideration by the state market commission, and many growers feel that there is as great need for such organization as for those of fruit, nut and egg producers. The hazards of turkey production are greater than those of egg production. Given fair stock and reasonable care the pullet crop is practically certain. With the best of stock and the most exacting care one is never certain of his turkey crop, and if at the end the bottom falls out of the market, where is he? The demand for turkeys at holiday time has increased with the increase of our population till it has caught the attention of Middle West farmers who can raise their turkeys on home grown corn and wheat with far less expense than is possible to the California turkey rancher. How much truth there was in the item published a few weeks ago in the daily papers to the effect that prices in markets this year are low because of cold storage turkeys on hand I cannot say. If this is true an organization which will stabilize the market and make it impossible for left-over turkeys from other states to deprive California ranchers of their just earnings is an imperative necessity. The state market commission has its eye on these conditions and is ready to cooperate with the growers whenever they are ready.

Out of 3,627,028 turkeys in the United States in 1920, 174,708, or about five per cent, were in California. This is not the proportion we ought to have, with our magnificent climate, and great, dry valleys where turkeys find their most happy environment. With suitable organization for marketing, as well as for cooperative attack on the difficult problems of turkey culture, we ought to raise ten per cent of the turkeys raised in the country, and we are safe in predicting that another census year will see just such a report. Her system of marketing fruit and eggs has brought this state into the

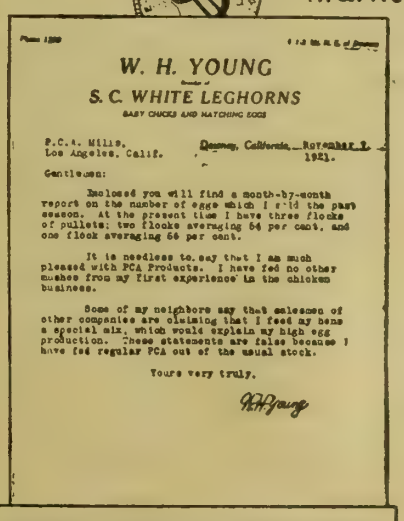
Market Value of Eggs Laid Month by Month



W. H. YOUNG
S. C. WHITE LEGHORNS
BABY CHICKS AND HATCHING EGGS

P.C.A. Mills, Los Angeles, Calif. Downey, California, November 1, 1921.

Gentlemen:

Enclosed you will find a month-by-month report on the number of eggs which I sold the past season. At the present time I have three flocks of pullets; two flocks averaging 54 per cent, and one flock averaging 56 per cent.

It is needless to say that I am much pleased with PCA Products. I have fed no other mashes from my first experience in the chicken business.

Some of my neighbors say that salesmen of other companies are claiming that I feed my hens a special mix, which would explain my high egg production. These statements are false because I have fed regular PCA out of the usual stock.

Yours very truly,
W. H. Young

Gentlemen:

During the past few months I have been much annoyed by other salesmen reporting that I am not feeding the regular standard PCA Dry Mash, but instead have a special mix made for my flock.

I know and you know that I have been buying straight PCA Mash through Blackie Bros.

Believe you will be pleased to know that some of my pullets are laying a pen average of approximately 70 per cent.

Yours truly,
Geo. England

OUR NATIONAL BIRD

(Continued from Page 593.)

limelight. California is quoted in the East as a model of protection to grower and justice to consumer. What the turkey producers demand, not singly, but unitedly, they will get. The caption in a recent issue of an Eastern agricultural publication, "United we stick; divided we are stuck," might well be taken as the slogan of California turkey producers.

Poultry Queries

Conducted by Jean A. Koethen

Cull the Broodies

I have what is considered a laying strain of White Leghorns and feed standard dry mash, scratch mixture, two-thirds wheat, one-third corn, sprouted oats daily; but April pullets are already ten per cent broody, although the flock from which they came had practically no sitters. Can you explain this and give remedy?—Subscriber, Napa.

When broodiness is greater among daughters than among their mothers the fault is evidently with their sires. Probably the breeder from whom you purchased your stock took no pains to make sure that his breeding males were sons of high producers. Many a flock has been spoiled by such carelessness. The ability to produce a large number of eggs without stopping to sit is a quality that is transmitted through the male line to a greater extent than through the female. If your breeding male is the son of a hen that went broody early and often, be sure his daughters will have the habit. Your only remedy is to cull out every hen that goes broody before next summer. Put these hens by themselves and try them out for a while before you send them to market. You may find some that go broody so rarely that they are worth keeping a while longer, but those that want to sit two or three times in a season are worthless on a commercial ranch.

MORE EGGS

One of the handiest things around the poultryman's house which we have seen is the P. C. A. calendar, the most striking feature of which is "More Eggs More Profit." It is issued by the Poultrymens Cooperative Milling Association. It not only has the usual sheet for each month but on the back are cash account and miscellaneous memorandum blanks. Instead of being perforated for tearing off, each monthly sheet is turned up under a cover and the new month appears with its possibilities for the complete poultry yard record. Thus all the sheets are retained until the end of the year, and at that time there will be the entire record of the poultry yard, including egg record for each day. This may be filed as an original entry journal and kept with other accounts of the ranch. Acting as a lock in the pocket which holds the months' records which have been completed, a pencil is inserted, thus always ready at hand for keeping the records.

POULTRY CENSUS

(Continued from Page 575.)

ens are marketed and slaughtered to a considerable extent throughout the year, and an enumeration in January of a given year would include a larger number of chickens than an enumeration made for April 15 of the same year. The production of eggs shows an increase of about five per cent, and it would seem reasonable to assume that the actual increase in the number of chickens on farms was approximately the same.

The chickens reported in 1920 were valued at $349,508,867, as compared with $140,193,129 in 1910.

The number of turkeys on farms in the United States on January 1, 1920, was 3,627,028, as compared with 3,688,708 on April 15, 1910; the number of ducks in 1920 was 2,817,624, as compared with 2,906,525 in 1910; and the number of geese in 1920 was 2,939,203, as compared with 4,431,980 in 1910. The figures for these fowls are probably less affected by the change in the census date than those for chickens.

In 1920 there were 2,410,421 guinea fowls on farms, as compared with 1,765,031 in 1910; and the number of pigeons reported in 1920 was 1,493,630, as compared with 2,730,994 in 1910. Only 231 ostriches were reported as on farms in the United States in 1920, as compared with 5,361 in 1910.

According to the table showing number of poultry in the various states, California had in 1920, 10,426,648 chickens as against 5,665,964 in 1910. Turkeys: 1920, 174,708; 1910, 116,602. Ducks: 1920, 64,762; 1910, 40,061. Geese: 1920, 14,914; 1910, 14,195. Guinea fowls: 1920, 8,987; 1910, 2,920. Pigeons: 1920, 120,986; 1910, 246,065.

Probably the two most surprising items in this report are the great, almost disastrous, decrease in number of ostriches, reducing from 5,361, which was the number in the United States in 1910, to 231, all there were left in 1920; and the other item has to do with the increase in guinea fowls from 2,000 to 8,000. The increase of nearly 100 per cent in chickens in this state is most gratifying.

Standard Asbestos Liquid Cement

Makes an old roof new. It is Acid, Alkali and Weather proof. Will not run, crack, peel or blister and can be used on any style of roofing. Manufactured in all standard colors. A postal card will bring an estimate and free literature without obligation on your part.

Our prices are the lowest and quality the highest.

Bean Simplicity
Outfit 604

A complete power sprayer as shown at the left. Bean quality thru and thru.

$300.00

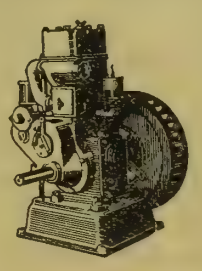
Bean Baby Simplicity
Outfit 602

A thoroly high-class little rig, complete and ready for work.

$220.00

For the Grower With a Small Acreage

These reliable little sprayers bring to the grower whose limited acreage warrants only a small investment in spraying equipment, the same sturdy dependable features found in the larger Bean outfits. They have complete Rotary Agitator, Built-in Pressure Regulator, One-piece Steel Platform, and other important advantages found in no other low-priced rigs. Outfit No. 604 has 100-gallon tank; No. 602 has 50-gallon barrel. Both have a capacity of 4¾ gallons a minute at 225 pounds pressure and do thoroughly effective work. When you're not spraying the rig can be used for white-washing and disinfecting pens, hutches, chicken houses, etc., and the 1½ H.P. engine is always ready for other jobs.



This is the new Bean 6 H. P. engine, which is used on our larger outfits. It can be furnished to replace the engine on your old sprayer if you want higher pressure and larger capacity. Write about it.

You Can Do a Lot of Good Work With One of These Little Outfits

It will keep your trees clean and thrifty, give you more and better fruit, and pay for itself over and over again. Sign and send the coupon for new Bean catalogue which describes the entire Bean line from these little rigs to the Bean Super-Giant, the largest and most powerful sprayer on the market.

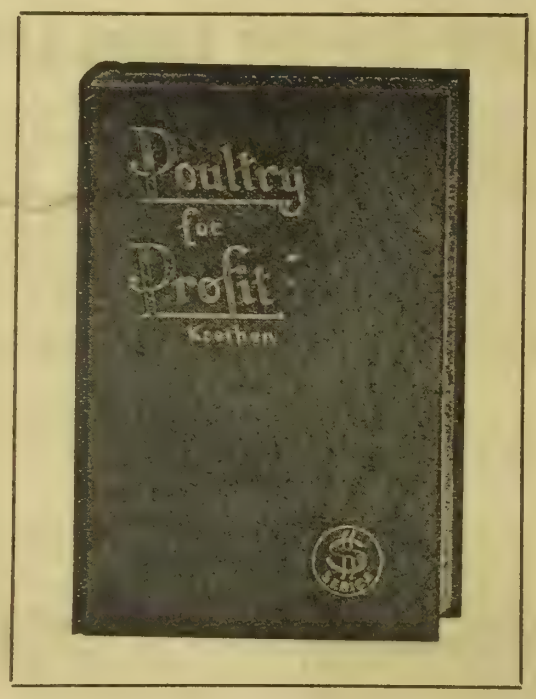
POULTRY Business can be made *Profitable*



Making use of information gathered from experienced poultry writers who have been guided by their practical experiences will always result in profit from poultry.

"Poultry for Profit"

By Jean A. Koethen

Gives more practical information on every branch of the Poultry Business and in a more concise and simple manner than any similar book published. With the knowledge gained by a study of this book, the necessity of practical experience is reduced to a minimum. By its guidance obstacles are overcome before it is too late.

Poultry for Profit is 5½x8 inches and contains 12 chapters, with over 225 pages of text and 18 pages of illustrations, printed on egg-shell book, binding full cloth vellum de luxe.

Some of the Valuable Information in this Complete Book

- Making a Beginning
- Marketing
- Housing and Yarding
- Sanitation and Hygiene
- Incubation
- Fixtures and Conveniences
- Brooding
- Diseases and Vices
- Feeding
- Ducks and Geese
- Breeding
- Turkeys

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

If among the more than 40,000 Cultivator's weekly circulation any fail to find any article they desire to purchase advertised in the Cultivator's columns, a special request is extended you to let your wants be known to the California Cultivator and we will place you in touch with proper parties.

EDITORIALETTES

One of our beautiful palms graces this week's cover. It may not add to our material wealth, but it is not alone material wealth which has made California great. Somewhere we have seen: "That which is purely practical, containing no element of idealism, may sustain existence and to that extent be valuable, but it does not civilize. I believe it is the idealism of pure knowledge, the idealism in applied knowledge, the idealism in industry and commerce, the idealism in literature and art, the idealism in personal religion, which leavens the life of the world and pushes forward the boundaries of civilization."

* * *

Speaking of the tariff, we may add that Cuban producers—with American importers—have been putting out some heavy editorial propaganda for free sugar. The propaganda has not come through the editorial rooms, however, but through "boiler-plate." Boiler-plate is ordinarily a harmless, innocuous lot of junk on the shelves of the workroom of the ordinary print shop. In case of shortage a few inches or a few feet of boiler-plate is sawed off and used in the columns of the paper, thus saving on the composition bill and often securing some very creditable material for the paper. Realizing the ease with which this matter gets entrance to the paper, the importers' propaganda secured entrance to the "boiler-plate" factories with special inducements to secure the delivery of the "copy" to sugar beet producing districts. Many a hurried country editor has passed it in and the beet producers have been educated by a low tariff propaganda. One of these pieces of copy was labeled: "Prepared by the National Geographical Society." Of course, the National Geographic never saw, nor in any way endorsed, the copy any more than did the other organizations which were used in effecting the disguise.

* * *

Limoneira Ranch has made a very tidy saving in fumigation expense. Formerly it cost some $76,000 annually to keep the scale pests reduced, but for a few years they have been trying the plan of "let the bug eat the bug," and this year's cost for fumigation for pest control is cut to $25,000.

* * *

Back in Kansas the other day they had a feast. The "covers" were $1.50. Something like 200 people gathered to partake of the feast. It consisted of napkins and toothpicks and the banqueters were told that the money which they had paid for their tickets was already spent for some 50 barrels of flour for starving Armenians. The banquet really ended as it had begun without any eats, but a jolly and even happy crowd went to their homes when it was ended.

* * *

If the builders are economical a real good battleship can be constructed for $38,500,000. That is, if the economy reaches to withholding the ammunition. But a battleship without ammunition is not especially effective so the call is made for $5,000,000 additional gold dollars to buy ammunition. This makes battleship building rather expensive. The only way of getting off cheaply in this armament affair is to build a submarine fleet. They only cost between $4,000,000 and $5,000,000, but a chaser to chase the other fellow's submarine costs around $6,000,000, and so on with millions and even billions and our taxes mount higher and higher.

* * *

Recently there was a great game of football between teams of two great institutions of the state. The crowd was so great that it was impossible for some who desired to attend. The enthusiasm was great, and in the main the inspiration to the two institutions and the spirit of friendly rivalry engendered was without question beneficial. But one feature can hardly receive fullest commendation though it seems to be endorsed very generally. This is indicated by the big type at head of first page spread in description of the game: "Before the game betting was three to one on (———) and two to one that the score would be better than 28 points in favor of (———)."

* * *

This state is spending more per capita on education than any other in the Union, and sometimes it almost appears that it is making gambling a part of the curriculum, and not kindergarten instruction by any means. Presumably the Teddy bear winnings made by the babies at the county and state fairs may be considered the first step. We have laws against it; why ignore them?

* * *

These long evenings afford opportunity for planning the coming season's orchard planting. He who would have his pick of the nurseries and secure selected trees to his liking is placing his order this month.

* * *

The state department of agriculture reports the beginnings of consolidation of two offices, which is now being effected in some of the counties. This is bringing together the offices of horticultural commissioner and sealer of weights and measures. The office of sealer of weights and measures, by the way, is responsible for a $500 fine on a Los Angeles County poultry buyer who manipulated his scales so as to defraud the raisers from whom he was buying. One of the worst short measure frauds we have heard of was in Kings County where nearly 15,000 quart milk bottles were found to be six ounces short.

* * *

As an example of American waste the U. S. geological survey mentions the fact that in the super-power zone, that is, the great industrial region between the cities of Washington and Boston, there is a waste of coal in the production of power by those industrial establishments, which amounted in 1919 to the equivalent of 13,500,000 tons. Steps are being taken to prevent some of this great waste. We Californians look with horror upon the spirit which has permitted this great loss—meantime our own hydro-electric is going to waste every year.

* * *

The great hog and corn belt is reporting more hog cholera than at any time since 1914. It has been so swift and deadly that many hog raisers think it some new and deadly disease, but specialists insist that it is the same old trouble and urge watchfulness and immediate reporting of any outbreak.

* * *

With tax paying, Christmas and federal income tax in the offing—and occasionally a pair of shoes to buy—there is some difficulty in getting a very exuberant kick out of the many appeals which are made at this time to help reduce the suffering in this and other lands, but there is so much honest to goodness need for bread, and a little milk to go with it, that all of us should increase our own happiness at this Christmas time by buying Christmas seals, aiding in Near East Relief, the Red Cross and even a thousand and one other causes—possibly a neighbor down the road would appreciate a side of bacon or pumpkin, or even a kind word.

CALIFORNIA WINS

Gordon True, Alex. McDonald and others of the state university who have bred, selected and fed the stock which made such great winnings at Chicago have cause to be proud of their work and of the conditions which made possible the great honors for this state at the Chicago International. This is not the first time, for four years ago we proved our abilities along this same line.

Besides our livestock, some of our boys of the agricultural high school clubs entered the judging contests, and the California team, while not winning all it could wish, made sixth place in the total score in competition with 11 other states. In the ranking of individuals Wilder McCollough tied for fourth place. In the free for all judging contest in which cattle were entered by agricultural club boys California took first and third, Wilder McCollough being first and Herman Darling third. While representing California, these boys were all from the southern end of the state, and it was understood that another year the north and south would split even in number of representatives.

THE WEATHER

We sure have had a streak of weather—rain and snow and sleet in the north; drying electrical winds of great force in the south. The citrus crop has been injured in many sections, in some of the very worst instances as much as 50 per cent loss being reported. In all the citrus districts, while the direct loss in wind injured fruit may be comparatively small, there will still be much fruit put in lower grade because of the storm. Some sections reported wind velocity of 75 miles an hour. In any case, speed limits were exceeded. Some trees were uprooted and buildings injured.

CROP INSURANCE

Abnormal weather conditions have renewed discussion as to crop insurance. Occasionally the discussion has to do with the organization of mutual companies, but as a rule in California it is felt that mutual or local insurance would not be safe. In states like Iowa mutual hail and cyclone insurance has proven wonderfully successful. But hail storms and cyclones usually visit only a small section of the state, and by keeping the mutual organizations strictly within state lines the loss has been borne by the many and the few have benefited. In a California citrus crop mutual insurance concern the loss would have to be paid by practically the same people who suffered the frost damage.

Presumably the same is true in Florida. In any case, we note in the Florida Grower that insurance brokers of Philadelphia are taking risks which are spread over a great number of companies. Commenting on the situation the Florida Grower says:

"As I understand it he will write policies on individual groves or an association may take out a blanket policy on the crop of all its members. No provision is made for insuring trees, though that may come another year; it is being considered. Insurance applies only to fruit actually on the trees at time of damage and does not include injury to bloom, the policy automatically expiring on March 15. No policy goes into effect until 72 hours after it has been written. I presume this latter is to forestall applications that might be made at a time when a freeze may have been predicted by the weather bureau. Insurance will be confined to the south of the northern borders of Volusia, Marion and Citrus Counties. Rates will be on a sliding scale, water protection having an influence in the rate making. The lowest rate will be 6 per cent and from that up to 8½ per cent, the insurance agent to be the judge as to the frost danger.

"Great interest will no doubt be aroused among the growers at this announcement. Florida should feel honored that the plan is to be tried out here first. California will probably be considered another year. The plan has infinite possibilities in the safeguarding of a citrus investment and no doubt in the future mortgagees will insist that a crop be insured and when the time comes that the companies will consider tree insurance citrus property will take its place as security along with other real estate securities, stabilizing the industry, possibly making government farm loan funds more available."

California at Chicago

By R. P. Royce

ONCE again the attention of the livestock world has been focused on California through the sensational exploits of the division of animal husbandry of the University of California at the world's greatest livestock show—the International Livestock Exposition at Chicago. For the second time the most coveted award in the whole livestock field comes to California along with other winnings that alone would be regarded as high compensation by most states—and once again California's bid for livestock supremacy is proved to be no idle claim.

Before analyzing in detail the honors won by our state institution it will be well to set up the proper background in order to appreciate in full the true significance of the accomplishment.

Twenty-one years ago the International Livestock Exposition was brought into existence to serve as the court of last resort for all livestock activities. Since that time—save in the years of 1914 and 1915 when no shows were held because of the foot and mouth epidemic—the show has attained a stature overtopping any similar event in the world, and it has come to be accepted that to win at Chicago constitutes the highest of high honors—and by common consent the supreme award is the grand champion steer or heifer.

It should be understood that all the breeds of beef cattle, sheep, swine and horses are taken care of in standard classifications, and in addition special classes for steers and heifers, wethers and barrows are provided. These classes are open to the world. There are also separate classes for fat stuff shown by agricultural colleges.

For years the show expanded and functioned mainly for the country east of the Rocky Mountains. Until 1916 no exhibitor or institution from the Pacific Coast country felt justified in measuring strength with the East, consequently no thought was ever given this coast country. It was in 1916 that Gordon H. True, head of the animal husbandry division of the California institution, conceived the notion that the time had arrived to demonstrate to the world just what might be expected of California in a livestock way. At first he didn't get much encouragement, either from the institution or the livestock fraternity. The idea seemed to be that True and his staff were overenthusiastic. Finally a way was found and a small exhibit was slipped into Chicago. Nobody paid much attention to the fact that California was entered—but when the smoke cleared away California had the grand championship and the reserve grand championship tucked away. It is probable that no single thing has done more to shove California into the limelight of the livestock world than the 1916 exploit. Since that time the institution has added additional laurels to this state.

In 1918 we had the champion Shorthorn steer along with a fair share of winnings in the sheep and swine classes. In 1919 the grand championship was barely missed but we landed the reserve together with numerous sheep and swine entries. No appearance was made in 1920.

This year, at what is said to be the greatest International of all, California won as follows:

Beef Cattle

Lula Mayflower, a blue-gray, cross bred (Shorthorn-Angus) senior yearling heifer, was first in class, champion grade, champion yearling and grand champion of the show.

California Standard, a senior pure bred Aberdeen-Angus steer calf, first in class, champion Angus and reserve champion calf of the show.

California Bystander, a junior pure bred Aberdeen-Angus calf, was first in class.

California Perfect Lad, a junior yearling cross bred (Hereford-Angus) steer, was second in the Hereford specials.

First prize grade herd.

Champion steer herd.

In the college specials California won the group of five and the championship besides winning first, second and third on steer calves.

Fat Sheep

Cross bred wether, first, champion and reserve grand champion of the show.

Southdown wether, second, third and fifth and first prize pen.

Hampshire wethers, first, second and fifth and first prize pen.

Grade yearling wethers, third in class and first prize pen.

Rambouillet wethers, third and fifth in class and second prize pen.

Shropshire wethers, second in class and fourth prize pen.

In the college classes California sheep won first and second on wether lambs, third on yearling wether, champion wether, and best five wethers.

Fat Swine

Hampshire barrow, second in class. Poland China barrow, second in class. Berkshire barrow, fifth in class. Poland China pen of three, fourth. Poland China get of sire, third. The Poland China pen of five was sixth in the college classes.

The above showing appears even more remarkable when it is known that there were entered in the show 410 head of fat steers and heifers, 499 head of fat sheep and 766 head of barrows. Beside the individual exhibitors 13 of the leading colleges in America competed and California won over 50 per cent of the prizes offered for college stock.

Out of this most recent demonstration of California's livestock possibilities, while remembering former winnings at Chicago, California livestock owners should find plenty of inspiration. Such accomplishments demonstrate most conclusively that we can produce the equal of any section in the world. Every single animal in the university's showing this year and in former years was bred and developed at the university farm under conditions in no way out of reach of the average progressive stockman.

Practically speaking, the only feeds used in developing the winners have been barley, oats, bran and alfalfa. The sheep and cattle have had some roots.

An interesting sidelight on the grand champion lies in the fact that this is the first time in history that a heifer has won top rating at Chicago. In reference to Lula Mayflower the Chicago Daily Drovers' Journal has this to say:

"William Watson, Scotch judge of grades and cross breds at the International Livestock Exposition, broke precedent when he tied the grand champion honors in the fat steer show on a heifer at the close of the contest late yesterday.

"In so doing, however, the hard working Scotchman chose an entry which for her wonderful compactness, depth of flesh and quality was feared by her rivals from the time she was uncovered in her class. This heifer was the Shorthorn-Angus senior yearling, Lula Mayflower, which came to the front when she headed her class of 16 entries.

"When the heifer went into the contest for champion by ages, she vanquished her most formidable rival, Larchmont Stamp, a pure bred Shorthorn shown by Charles and Walter Denby of Carlinville, Illinois, as Mr. Watson beckoned her the winner.

"Her next and last contest came when she met the champion over all under year steer, a pure bred Hereford, Dauntler, shown by Jimmy Price of Onalaska, Wisconsin, veteran of many ring battles. For some moments the crowd studied tensely the Scotchman and the pair of steers, hardly any one feeling sure of which would win, so well matched they seemed. Then Mr. Watson indicated the blue-gray from the coast and the black cattle men went wild and nearly smothered the heifer and the reserve champion as well.

"'She's a grand one. She is right in her prime. And there's not a Hereford steer in all England like that one,' he said, nodding to the reserve.

"The grand champion heifer made her first bow to the public in the arena here this week, according to Prof. Gordon H. True of the university farm at Davis, where she was bred and fed. The heifer had run with the beef cattle herd all her life, getting the same ration—corn, silage, alfalfa hay and grass. This last August she was given some extra grain, mostly barley and bran, with a little oats and molasses. She was carried to a finish on this ration.

"The dam of Lula Mayflower is a pure bred Angus cow, which is also the dam of this year's champion pure bred Angus steer, California Standard, which proves again that 'blood will tell.'"

Credit for this splendid showing goes to Professor Gordon H. True of the animal husbandry division, the individual members of his staff and in a very large measure to Alex. McDonald, master fitter, who has fed and developed all of the cattle; George Philips Shepard of the university flocks and Ralph Dunham, herdsman of the swine division.

California Winners at Portland

University of California Dairy Products Judging Team winning first place in judging of all dairy products at Western Dairy Products Show, Portland, Oregon. Top row: H. J. van der Merwe, J. J. McNamara (alternate). Bottom row: Prof. G. D. Turnbow, coach; H. E. Paxton, M. A. Salis.

CALIFORNIA AGAIN LONG WINNER
